

₹ NATIONAL INCOME & GROSS DOMESTIC PRODUCT — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. National Income, GNP & NNP — Core Identities
2. National Income Meaning, Open-Economy Identity & GDP Methods
3. NDP, Nominal/Real Income & Personal Disposable Income
4. Economic Growth vs Development — Welfare, Indicators & Quality of Life
5. Hindu Growth Rate, Inflation, Labour Share & Structural Features
6. Business Cycle & Downturn Terms — Boom to Depression
7. New Economic Policy 1991 — LPG, Stabilisation & Structural Adjustment
8. National Income Estimation in India — History, Committee & Institutions
9. Base Year & National-Accounts Method Changes
10. Per Capita Income — Price Basis & Historical Figures
11. India's Growth Record — Decades, Shocks & Sectoral Drivers
12. State Economies & Per Capita Income — Ranking is Year-Specific
13. Capital Formation & Capital-Output Ratio — Growth Mechanics
14. Why Per Capita / Rural Income Can Remain Low
15. Domestic Saving — Rates & Historical Benchmarks
16. Saving Sources & Composition — Household Sector Dominates

1. National Income, GNP & NNP — Core Identities

- National Income ka standard identity NNP at Factor Cost (NNP_{FC}) diya hai. NNP at Market Price = GNP - Depreciation; aur NNP_{FC}/National Income = NNP_{MP} - Indirect Tax + Subsidy = NNP_{MP} - Net Indirect Tax. [Q1, Q2, Q3, Q4, Q5, Q11]
- GNP citizens ke dwara country ke andar ya bahar ek saal mein produce ki gayi final goods & services ka total value measure karta hai; depreciation ghataane par NNP milta hai. GNP aur NNP national product ke different measures hain. [Q9]

⚠ FORMULA QUICK RECALL

- ▶ $NNP = GNP - \text{Depreciation}$
- ▶ $NNP_{FC} / \text{National Income} = NNP_{MP} - (\text{Indirect Tax} - \text{Subsidy})$
- ▶ GDP se NNP: $NNP = GDP - \text{Depreciation} + \text{Net Income from Abroad}$

[Q1, Q2, Q3, Q4, Q5, Q11]

2. National Income Meaning, Open-Economy Identity & GDP Methods

- National income ka meaning ek specified period (usually one year) mein country ke citizens dwara produced final goods aur services ke total monetary value se hai. India mein latest estimation NSO (formerly CSO) ke through hota hai. [Q6]
- Open economy mein national income identity: $Y = C + I + G + (X - M)$, jahan C consumption, I investment, G government expenditure aur X-M net exports hai. [Q7]
- GDP calculate karne ki teen methods hain: Production Method, Income Method aur Expenditure Method. 'Diminishing cost method' GDP calculation method nahi hai. [Q8]
- India mein national income calculate karne ki ek major practical problem unorganized sector hai, kyunki us sector ki income ko accurately capture karne ke liye appropriate data/method ki limitation highlight ki gayi hai. [Q12]

3. NDP, Nominal/Real Income & Personal Disposable Income

- Nominal GDP current prevailing market prices par valued GDP hota hai. Nominal GDP aur Real GDP ka ratio price index se related hai. [Q10]

- Net Domestic Product = GDP - Depreciation. Per-capita income ko National Income / Population ke roop mein define karta hai; NDP ko GDP se better comparison measure bataya gaya hai kyunki depreciation already subtract hota hai. [Q13]
- Personal Disposable Income (PDI) = Personal Income - Personal Tax Payments - Non-Tax Payments. Household isi disposable income ka ek part consume aur baaki save kar sakta hai. [Q14]
- Agar money income aur prices dono same proportion mein double ho jaayen, real income unchanged rahega—higher money income ko higher prices offset kar dete hain. [Q15]

⚠ EXAM TRAP — Formula Wording

- ▶ PCI = National Income / Population standard formula hai; NDP / Population wali wording ko PCI definition se mix na karein.
- ▶ **Formula-derived value aur printed figure mein mismatch ho sakta hai; concept aur printed figure ko ek hi data point na maanein.**

[Q13]

4. Economic Growth vs Development — Welfare, Indicators & Quality of Life

- Important concept mapping: Economic Development → Structural Change; Economic Growth → GDP expansion; Sustainable Development → Environment + future needs; Quality of Life → Health aur broader wellbeing. [Q23]
- Economic development ko assess karte waqt GDP, GNP aur per-capita GNP jaise indicators relevant hain; World Bank se financial assistance ka increase apne aap economic development ka theoretical indicator nahi hai. [Q16]
- Amartya Sen ka approach people-oriented hai: poorest person ko economic security, world economy ke saath integration ke saath national protection, aur planning mein commodities se zyada individuals par focus. ise welfare/human-development approach se jodta hai. [Q17, Q18]
- Economic development ke major factors mein capital accumulation, technological improvement, population dynamics, specialised division of labour, entrepreneurship aur natural resources shamil hain; technocrats/bureaucrats ko usually direct core factor ke roop mein classify nahi kiya jaata. [Q34]
- Economic growth ka most suitable indicator steady increase in real per-capita income/per-capita product hai. Standard of living ko bhi per-capita income reflect karta hai. [Q35, Q36, Q37, Q38]
- Sirf real GNP aur per-capita GNP badhna high development prove nahi karta; agar poverty aur unemployment saath badh rahe hon to benefits broad-based nahi hain. [Q39]
- Economic development multidimensional approach maangta hai. Government macro-economic aur micro-economic dono issues par focus karti hai, sirf micro issues par nahi. [Q57]

5. Hindu Growth Rate, Inflation, Labour Share & Structural Features

- 'Hindu Growth Rate' term Prof. Rajkrishna se associated hai; ise Indian economy ki lagbhag 3.5% National Income/GDP growth rate se relate karta hai. [Q19, Q20]
- Economic growth ke saath income aur aggregate demand badhne par inflationary pressure aa sakta hai; growth aur inflation ka relation context-dependent hota hai. [Q21]
- Labour ka GNP mein share low rehne ka reason: wages, prices ke comparison mein relatively low rehte hain; price rise ke karan wage increase ka real benefit limited ho sakta hai. [Q22]
- Relevant period mein GDP four-times increase nahi hua; GDP mein public-sector share decline aur private-sector share increase hua. [Q24]
- India ki occupational structure ka relatively stable rehna capital-intensive investment pattern se joda gaya hai—GDP ke sectoral composition mein change ke bawajood employment structure utni tezi se shift nahi hua. [Q32]
- Real sector goods/services production se related hai: farmers harvesting aur textile mills fabric banana real-sector activities hain; bank lending aur overseas rupee-bond issuance financial-sector activities hain. [Q33]

6. Business Cycle & Downturn Terms — Boom to Depression

- Boom = high business activity with rising income, output and employment; Recession = business activity, income, output aur employment ka gradual decline; Depression = severe underemployment/unemployment plus sharp fall; Recovery = prices, income, output aur employment mein continuing rise. [Q25]

- Terms: Meltdown securities/mortgages ke fall se related state; Recession business/industrial-cycle contraction; Slowdown diminishing economic activity ko denote karta hai. [Q26]
- 1997-98 mein Indian economy ka growth 4.3% tak slow hua aur public investment bhi pichhle years ke comparison mein ghata. [Q75]

7. New Economic Policy 1991 — LPG, Stabilisation & Structural Adjustment

- 1991 ki New Economic Policy liberalisation, privatisation aur globalisation (LPG) par based thi. Iski criticism India ke andar aur bahar different ideological expectations ke karan hui— ise differences in ideals se link karta hai. [Q27, Q28]
- India mein economic liberalisation ka major policy turning point 24 July 1991 ki New Industrial Policy thi; 18 major industries ko chhodkar baaki industries ko licensing se largely free kiya gaya. [Q29]
- Stabilisation demand-side management hai— inflation control, fiscal adjustment aur balance of payments; Structural Adjustment supply-side reforms hai—trade/capital flows, industrial deregulation, disinvestment aur financial-sector reforms. Structural adjustment relatively gradual/longer process hai. [Q30]
- 1991 ke Finance Minister Dr. Manmohan Singh ko Indian economy ke liberalisation ka pioneer kehta hai. [Q31]

8. National Income Estimation in India — History, Committee & Institutions

- Dadabhai Naoroji ne 1867-68 ke liye per-capita income lagbhag ₹20 estimate ki thi—ye India mein national-income estimation ke earliest attempts mein se ek tha. First scientific national-income estimate V. K. R. V. Rao se associated hai. [Q41, Q43]
- 1949 National Income Committee ke Chairman P. C. Mahalanobis the; Dr. D. R. Gadgil aur V. K. R. V. Rao key members the. [Q42]
- Latest national-income estimates NSO release karta hai, jo MoSPI ke under hai. 2019 mein CSO aur NSSO merge karke NSO bana; CSO May 1951 mein formed hua tha. [Q44]
- Historical context mein CSO/Central Statistical Organisation naam use hota tha; current institutional name NSO hai. [Q45, Q46, Q47, Q48]
- Capital formation ke statistical compilation mein RBI aur Central Statistical Organisation/NSO jaise institutions ka role raha hai. [Q49]

⚠ EXAM TRAP — NSO vs CSO

- ▶ Current institutional wording mein National Statistical Office (NSO), MoSPI ke under hai.
- ▶ **Older data mein Central Statistical Organisation (CSO) naam milta hai; later institutional restructuring mein NSO framework use hota hai.**

[Q44, Q45, Q46, Q47, Q48]

9. Base Year & National-Accounts Method Changes

- National-income accounting mein Base Year woh benchmark year hai jiske prices se Real GDP/constant-price series calculate hoti hai. [Q50]
- 2004-05 se 2011-12 base-year shift aur factor-cost based GDP framework se market-price/GVA-oriented framework ka transition ek major statistical revision tha. [Q51, Q52, Q53]
- Historical national-income series mein base years 1980-81 se 1993-94, phir 1999-2000 aur 2004-05 tak revise hue; February 1999 ki new series ne 1980-81 base ko 1993-94 se replace kiya. [Q54, Q55, Q56]

⚠ EXAM TRAP — Base Year is Date-Sensitive

- ▶ National-accounts base year time-sensitive hota hai. 2011-12 working base raha; later series schedules mein GDP 2022-23, CPI 2024 aur IIP 2022-23 jaise revised bases announce hue.
- ▶ **Historical figures apne base year/period se linked hote hain; later base revision purane period ke figure ko automatically replace nahi karti.**

[Q50, Q54, Q55, Q56]

10. Per Capita Income — Price Basis & Historical Figures

- Current-price per-capita income growth generally constant-price growth se higher ho sakti hai, kyunki constant-price measure inflation/price-level effect ko remove karta hai; dono growth rates ka gap largely price changes ko reflect karta hai. [Q40]
- 2009-10 ke historical estimates mein per-capita income ₹46,249 report hui, jabki revised/current-series calculation mein ₹48,189 ka figure bhi milta hai; difference series revision ki wajah se hai. [Q58]
- 2013-14 new-series per-capita NNI: current prices ₹80,388 aur constant prices ₹69,959. [Q59]
- 1951-52 se 2015-16 ke old-base historical comparison mein 2007-08 high per-capita-income growth year tha; updated series mein 2021-22 ke around 9.3% growth ko recent broader period ka high point bataya gaya. [Q60]
- 2010-11 per-capita income at 2004-05 prices ₹35,993 thi; updated 2011-12 base series ke liye same year ₹62,170 diya gaya hai. [Q61]
- 1991-92 per-capita annual income ₹7,251 thi. [Q62]

⚠ EXAM TRAP — Current vs Constant / Old Base vs New Base

► Per-capita income figures base year aur series revision ke saath change ho sakte hain; historical aur revised figures alag series ko represent kar sakte hain.

► ₹80,388 current-price figure specific year/series se related hai; ise other price-base figures ke saath mix na karein.

[Q58, Q59, Q60, Q61, Q62]

11. India's Growth Record — Decades, Shocks & Sectoral Drivers

- 1990s decade mein ke updated table highest GNI growth 1999-2000 mein 8.8% thi; broader updated series mein 2021-22 ka 9.9% growth highest highlighted hai. [Q63]
- COVID contraction ke dauran 2020-21 mein GNI, NNI aur per-capita NNI ki annual growth current aur constant prices —dono par negative rahi. [Q64]
- 2003-04 se 2006-07 ke comparison mein 2006-07 highest-growth year tha; updated data mein 2021-22 GNI growth around 9.9% ke saath recent high point raha. [Q65]
- GDP aur per-capita-income growth rates continuously increase nahi karte—five-year series aur decade observation dono fluctuating real growth ko show karte hain. Market-price GDP rupee value ka trend nominal price changes se alag behave kar sakta hai. [Q66, Q67]
- Economic Survey 2020-21 mein IMF estimate ke basis par FY2022 real growth 11.5% assume ki gayi thi; baad ke IMF estimates/forecasts revise hue, isliye 11.5% us publication-period ka forecast tha. [Q68]
- Selected historical growth figures: 2005-06 annual growth roughly 8-9% range; 1998-99 GDP growth 6.5%; 2002-03 RBI assessment 5-5.5%; Asian Development Report 2004 ne 2005 growth around 6.9% project ki thi. [Q69, Q70, Q73, Q74]
- 2013-14 GDP growth 4.7% vs 4.5% in 2012-13 ka main reason agriculture & allied sector ki higher growth ko maana gaya. [Q71]
- Historical context mein saving ratio ka rise higher GNP growth ke saath linked tha. [Q76]
- Long run mein Indian economy stagnant nahi rahi; growth rate fluctuate karti rahi aur foodgrain production overall increase hua. [Q86]

⚠ EXAM TRAP — Revised Data Can Change the Comparison

► Original advance-estimate context mein agriculture & allied sector ko 2009-10 mein negative maana gaya tha.

► Later revised comparison mein picture change hui; updated 2025-26 table mein Mining & Quarrying negative growth show karta hai.

[Q72]

12. State Economies & Per Capita Income — Ranking is Year-Specific

- 2023-24 mein compared State economies mein Maharashtra ka NSDP sabse bada tha. [Q77]

- Historical ranking year-wise change hoti hai: 1998-99 mein Punjab > Maharashtra > Gujarat > Uttar Pradesh; historical period order Maharashtra > Gujarat > Tamil Nadu > Karnataka tha. [Q78, Q79]
- Recent period-specific comparisons mein Bihar ki per-capita income States ke beech lowest levels mein rahi. [Q80, Q81]
- Older-period per-capita state rankings year ke saath badalti rahi hain; Punjab, Goa (2009-10) aur Haryana alag period-contexts mein relevant rahe. [Q82, Q83, Q84]
- 2010-11 comparison mein Bihar ka GSDP growth highest tha; 2023-24 ke updated comparison mein bhi Bihar high-growth States mein top par dikhaya gaya. [Q85]

⚠ **EXAM TRAP — State Rankings Change with Year**

- ▶ State PCI/GSDP rankings year aur price basis ke saath change hoti hain; older-period ranking ko current general fact na samjhein.
- ▶ Bihar ke 2023-24 context mein ₹62,201 aur later updated dataset mein ₹54,637 jaise different figures milte hain; year/data series ko mix na karein.

[Q78, Q79, Q80, Q81, Q82, Q83, Q84, Q85]

13. Capital Formation & Capital-Output Ratio — Growth Mechanics

- Capital formation net capital accumulation ko describe karta hai. process savings + financial institutions ki effectiveness par depend karta hai, aur investment capital formation ka essential factor hai. [Q89]
- Capital-Output Ratio (COR) batata hai ek unit output produce karne ke liye kitna capital chahiye. High COR = low production efficiency; isi liye high savings/investment ke bawajood output comparatively kam badh sakta hai. [Q90, Q91]
- Country X mein economic growth ka necessary driver capital formation hai. Planning Commission ke view mein rising capital formation higher productivity, income aur employment ko support karta hai. [Q94]
- Near-term high growth ke mein stalled/pending productive projects ko implement karna strongest immediate support bataya gaya; GST, skill development aur ease of business ko longer-run supportive factors maana gaya. [Q95]

⚠ **EXAM TRAP — Conflicting Data**

- ▶ Productive stalled/pending projects ko implement karna capital-formation logic se directly linked action hai.
- ▶ **GST-related figures year/series ke saath change ho sakte hain; conflicting figures ko same period ka data na maanein.**

[Q95]

14. Why Per Capita / Rural Income Can Remain Low

- Present context mein national income ke saath per-capita income mein bhi improvement dikhta hai; saath hi population ka substantial part poverty line ke below rehna ek separate welfare concern hai. [Q87]
- Rural income urban income se lower hone ke reasons: large farmer illiteracy/low scientific-agriculture knowledge, primary products ka lower value, aur agriculture mein comparatively low investment—teenon together responsible hain. [Q88]
- India mein slow per-capita-income growth ke do main structural reasons high Capital-Output Ratio aur high population-growth rate diye gaye hain. [Q92]
- Uttar Pradesh ke low per-capita income ke reasons: rapidly growing population, lack of entrepreneurship aur inadequate infrastructure; agriculture modernization ko cause nahi maana gaya. [Q93]
- Dated context mein slow PCI ke reasons ke roop mein rapid population growth, heavy price rise, slow agricultural/industrial development aur foreign-exchange non-availability—ye sab factors apply karte hain. [Q96]

15. Domestic Saving — Rates & Historical Benchmarks

- 2000-01 se 2010-11 decade mein Gross Domestic Saving rate ka high point 2007-08 mein 37.8% of GDP tha; 2022-23 aur 2023-24 (1st RE) ke updated figures around 30.7% rahe. [Q97]

- 'currently' ke liye current estimate use hota hai: gross domestic saving 30.7%, isliye 30-35% range. Original 1997 context mein rate 20-25% range tha. [Q98]
- 2012-13 mein Gross Domestic Saving = 30.1% of GDP tha. [Q99]
- 2006-07 saving ratio Updated table mein 34.9% tha—thus 'above 32%'. 2023-24 (1st R. E.) ke liye 30.7% total saving mention karta hai. [Q100]

⚠ EXAM TRAP — 'At Present' vs Relevant Year

► Saving-rate figures period-specific hote hain; historical aur latest figures ko same year ka data na maanein.

[Q97, Q98, Q99, Q100]

16. Saving Sources & Composition — Household Sector Dominates

- India ki gross saving mein household sector ka contribution sabse bada raha. 2023-24 (1st RE) shares: Household 18.1%, Private Corporate 10.7%, Public Sector 2.0%. [Q101]
- Historical period mein private corporate sector ka saving share increase hua tha. Updated table 2019-20 to 2023-24 ke household/private-corporate/public shares bhi deta hai, jisme year-to-year fluctuations hain. [Q102]
- Household saving ke forms mein physical assets ka share sabse bada raha. 2023-24 ordering: physical assets > gross financial saving > less financial liabilities > gold/silver ornaments. [Q103]
- Household sector ka contribution sabse bada hai; descending pattern Household > Private/Non-financial Corporate > Public/Financial Corporations > Government hai. [Q104]
