

POVERTY & UNEMPLOYMENT — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Poverty — Meaning, Types & Estimation Methods
2. Poverty-Line Committees, Calorie Norms & Methodologies
3. Inequality, Poverty Concepts & Estimation Institutions
4. National Poverty Estimates, Hunger & Historical Trends
5. State-wise Poverty — Ratios, Numbers & Regional Patterns
6. Poverty Eradication, DRDA, PDS & Rural Programmes
7. Human Poverty Index & Multidimensional Poverty Index
8. Causes, Social Indicators, SHGs & Poverty-Alleviation Tools
9. Employment Growth, Educated Unemployment & Rural–Urban Link
10. Employment Structure & Organised-Sector Trends
11. Disguised / Hidden Unemployment & Usual Status
12. Measuring Unemployment — NSSO, WPR, LFPR & Elasticity
13. PLFS, Women's Employment & Recent Unemployment Trends

1. Poverty — Meaning, Types & Estimation Methods

- Poverty line society/country mein minimum consumption/income level ko indicate karti hai, jo basic needs meet karne ke liye necessary maana jata hai. [Q1]
- Poverty ka basic meaning fundamental needs ko fulfil na kar pana hai. Iske two major forms Absolute Poverty aur Relative Poverty hain; Subjective Poverty bhi ek recognised form hai. [Q2]
- 1995 ke World Summit for Social Development, Copenhagen mein United Nations ne poverty ko two forms—Absolute Poverty aur Overall Poverty—mein define kiya. [Q3]
- India mein poverty line household consumption expenditure par based determine hoti hai. Head Count Ratio aur calorie-intake approach bhi poverty estimation mein use hue hain. [Q4]
- Planning Commission ne below-poverty-line population estimate karne ke liye expert group constitute kiya; poverty estimation mein National Sample Survey Office (NSSO) ke household consumption-expenditure data ka use hua. [Q5]
- Poverty estimation ke household surveys NSSO/NSS ke through conduct kiye jate the. [Q6]
- India mein unemployment aur poverty estimates historically NSS/NSSO household consumption and employment surveys par based rahe hain. [Q7]
- India ki poverty line determination ka base consumption data hai. [Q8]
- India mein poverty estimation ka base household consumption expenditure hai. [Q9]
- Urban poverty estimation mein CPI-IW use hota tha, jabki rural/agricultural-labour poverty estimation mein CPI-AL/RL relevant price index tha. [Q10]
- NSSO 61st Round (2004-05) mein poverty estimation ke liye URP aur MRP methods use hue. URP mein consumption items ke liye uniform 30-day recall period use hota tha. [Q11]
- Literacy poverty-line estimation ka direct indicator nahi hai; other listed consumption/price-related indicators use hote hain. [Q12]

2. Poverty-Line Committees, Calorie Norms & Methodologies

- 1977 mein Dr. Y.K. Alagh ki chairmanship mein 'Minimum Needs Programme and Effective Consumption Demand' Task Force constitute hui aur 1979 mein report submit ki. Poverty line ko nutritional requirement/calorie norm par base kiya gaya—rural ~2,400 kcal aur urban ~2,100 kcal per-capita per day. [Q13]
- Poverty line ka concept V.M. Dandekar aur N. Rath ne 1971 ke fundamental study mein diya. [Q14]
- Traditional Planning Commission poverty-line approach mein urban area ke liye 2,100 kcal aur rural area ke liye 2,400 kcal per-capita per day norm use kiya gaya. [Q15]
- Rural poverty-line estimation ke historical calorie norm mein 2,400 kcal per person per day use kiya gaya. [Q16]
- Traditional poverty-line approach calorie intake se linked raha hai. [Q17]
- Poor households minimum prescribed food basket ke entitlement se related hote hain. [Q18]
- Suresh Tendulkar was the chairman of the committee constituted by the Government of India in 2005 to determine new standards for estimating the population living below the poverty line. [Q19]
- States mein price levels differ karte hain. Suresh Tendulkar Committee (2005) ne essential consumption goods/services aur State-wise expenditure ko use karke rural aur urban poverty lines estimate ki. [Q20]
- NSSO household consumer expenditure survey ke data par Tendulkar Committee recommendations ko use karke Planning Commission ne 2011-12 ka poverty ratio aur poverty line update kiya; ye poverty estimates July 2013 mein release hue. [Q21]
- Tendulkar Committee ke 2012/NSSO-based context mein poverty ratio 33.35% diya gaya tha; figure ko relevant survey/report context ke saath padhein. [Q22]
- Rangarajan Committee ne rural aur urban poverty line ke liye lag consumption-expenditure thresholds liye: rural areas mein Rs 32 per capita per day (Rs 972 monthly) aur urban areas mein Rs 47 per capita per day (Rs 1,407 monthly). [Q23]

EXAM TRAP — Tendulkar vs Rangarajan — Poverty Line Numbers

- 2011-12 Tendulkar estimate: rural ₹816/month (₹26.32/day), urban ₹1,000/month (₹32.25/day).
- Rangarajan methodology: rural Rs 972/month (~Rs 32/day), urban Rs 1,407/month (~Rs 47/day), poverty ratio 29.5%; Tendulkar estimate 21.9%. Dono methodologies ke thresholds alag hain.

[Q21, Q23]

3. Inequality, Poverty Concepts & Estimation Institutions

- Lorenz Curve Dr. Max O. Lorenz ne income aur wealth inequality study karne ke liye propound ki. Isi economist ke naam par ise Lorenz Curve kaha jata hai. [Q24]
- Income distribution ko Lorenz curve se represent kiya jata hai. [Q25]
- Gini coefficient Corrado Gini ne 1912 mein propound kiya. Ye society mein income inequality aur national-income distribution ka mathematical measure hai. [Q26]
- 'Culture of Poverty' concept American anthropologist Oscar Lewis se associated hai; persistent poverty ke saath cultural/behavioural patterns generation-to-generation reproduce ho sakte hain. [Q27]
- Economist Ragnar Nurkse ne 1953 ki book 'Problems of Capital Formation in Underdeveloped Countries' mein Vicious Circle of Poverty explain kiya: poor countries poverty ke self-reinforcing cycle ki wajah se poor bane reh sakte hain. [Q28]
- Cyclical poverty mein people baar-baar poverty mein enter aur exit karte rehte hain. Ye agriculture aur industry dono contexts mein mil sakti hai. [Q29]
- National aur State poverty-line estimation ka nodal role pehle Planning Commission ke paas tha; 1 January 2015 se Planning Commission ki jagah NITI Aayog aaya. [Q30]
- National aur State level poverty estimation ke liye Planning Commission nodal agency thi. [Q31]
- 1989 mein D. T. Lakdawala ki chairmanship mein expert group constitute hua, jiska kaam 'Proportion and Number of Poor' estimate karna, poverty-estimation methodology review karna aur zarurat par poverty line redefine karna tha; report July 1993 mein submit hui. [Q32]
- Suresh Tendulkar Committee aur Lakdawala Committee dono India mein poverty estimation se associated rahe hain. [Q33]
- Sixth Five-Year Plan period se Planning Commission national/State poverty estimation coordinate karta raha; methodology review ke liye time-to-time expert committees constitute hui. [Q34]
- Urban poor identification ke liye 2010 mein Prof. S. R. Hashim ki chairmanship mein expert committee constitute hui, jisne December 2012 mein report submit ki. [Q35]
- Poverty line se neeche rehne wale logon ko identifiable group ke roop mein classify karne se programme agencies benefits aur interventions ko accurately target kar sakti hain. [Q36]
- Malnutrition poor aur rich dono groups mein ho sakta hai—poor ke nutrition options limited ho sakte hain, jabki rich group mein excessive/unhealthy diet problem ho sakti hai. [Q37]

EXAM TRAP — Poverty Estimation Committees

- ▶ Suresh Tendulkar Committee aur Lakdawala Committee dono poverty estimation se associated hain.
- ▶ Historical poverty ratios methodology aur year ke saath change hote hain; figures ko same-series context mein compare karein. [Q33]

4. National Poverty Estimates, Hunger & Historical Trends

- Tendulkar estimate mein 2004-05 poverty ratio 37.2% tha; Planning Commission ke 2011-12 update mein ye 21.9% tha. [Q38]
- Tendulkar methodology ke 2011-12 estimate mein India ka poverty ratio 21.9% tha. [Q39]
- NFHS-5 based multidimensional-poverty data mein Jammu & Kashmir 4.80%, Himachal Pradesh 4.93% aur Uttar Pradesh 22.93% tha. States ke comparison mein Himachal Pradesh relevant hai, kyunki Jammu & Kashmir Union Territory hai. [Q40]
- Planning Commission/Tendulkar series mein poverty ratio 2004-05 mein 37.2%, 2009-10 mein 29.8% aur 2011-12 mein 21.9% tha. NITI Aayog National MPI 2023 mein multidimensional poverty 2015-16 ke 24.85% se 2019-21 mein 14.96% tak ghati. [Q41]
- Planning Commission ke 2009-10 estimate mein poverty ratio lagbhag 30% tha, jo earlier 37.2% estimate se lower tha. [Q42]
- Planning Commission ke 2004-05 URP estimate mein 27.5% population poverty line ke neeche thi. [Q43]
- Historical estimate mein India ki 26.1% population poverty line ke neeche thi; Tendulkar methodology ke 2011-12 data mein poverty ratio 21.9% tha. [Q44]
- Eleventh Five-Year Plan mein 7 crore new employment opportunities create karke poverty ratio 10% reduce karne ka target tha; Twelfth Plan mein bhi five years mein 10% reduction ka target rakha gaya. [Q45]
- World Development Report 2005 ke context mein India ki 80% population \$2/day se kam income par thi. World Bank ne September 2022 mein international poverty line \$1.90/day (2011 PPP) se revise karke \$2.15/day (2017 PPP) ki. [Q46]
- FAO ke 2003-era assessment mein world hungry population mein India ka share lagbhag 30% bataya gaya tha. Later UN/WFP context mein income-poverty aur undernourishment dono significant rahe; National/Global MPI updates mein 2019-21 India multidimensional-poverty figure 231.38 million (16.4%) diya gaya. [Q47]
- Global Hunger Index 2017 mein India score 31.4 ke saath 119 countries mein rank 100 par tha. Later ranks: 2020—94/107, 2021—101/116, 2022—107/121, 2023—111/125, 2024—105/127, 2025—102/123. [Q48]
- Global Hunger Index hunger aur malnutrition ko multidimensional indicators se compare karta hai; historical editions IFPRI ke saath partner organisations dwara publish hoti thi. [Q49]

EXAM TRAP — Poverty Figures — Historical vs Updated

- ▶ Historical figures: 2004-05 Tendulkar 37.2%, 2009-10 29.8%, 2011-12 Tendulkar 21.9%; multidimensional-poverty updates alag series hain.
- ▶ GHI rank aur World Bank international poverty-line figures bhi year-specific hote hain; later update ko old-year figure ke saath mix nahi karein. [Q38, Q39, Q41, Q43, Q44, Q46, Q48]

5. State-wise Poverty — Ratios, Numbers & Regional Patterns

- 1990s ke official data mein Bihar, Orissa, Madhya Pradesh aur Maharashtra ke tribal groups mein poverty incidence other social groups ke comparison mein bahut high tha. [Q50]
- NCAER survey ke relevant State comparison mein Bihar mein poverty-line ke neeche population ka percentage highest tha. [Q51]
- Bihar ki backwardness se social, economic aur political factors jude hain—low education, income inequality, social orthodoxies, industrial deficiency aur weak political will jaise factors important rahe hain. [Q52]
- Planning Commission ke 1999-2000 poverty data mein Odisha ka poverty ratio 47.1% tha, jo States mein highest tha. [Q53]
- Planning Commission ke 2011-12 estimates mein listed States ke comparison mein Uttar Pradesh mein poverty line ke neeche rehne wale people ki number highest thi. [Q54]
- Tendulkar methodology ke 2011-12 estimate mein Rajasthan ka poverty ratio 14.71% tha, yani roughly 15%. [Q55]
- Rangarajan methodology ke 2011-12 estimates mein all-India poverty ratio 29.5% tha; Chhattisgarh 47.9%, Goa 6.3% aur Rajasthan 21.7%. Highest-poverty group: Chhattisgarh 47.9, Manipur 46.7, Odisha 45.9, MP 44.3, Jharkhand 42.4; lowest group mein Andaman-Nicobar 6, Goa 6.3, Lakshadweep 6.5, Puducherry 7.7, Himachal Pradesh 10.9%. [Q56]
- Based on both the Tendulkar methodology and the Rangarajan methodology, state-wise comparison mein, the lowest percentage of population below the poverty line in 2011-12 was found in Himachal Pradesh. [Q57]
- 2009-10 ke official poverty-percentage data mein Goa ka poverty ratio States mein minimum tha. [Q58]
- Poverty ratios 2009-10 → 2011-12: Kerala 12.0% → 7.05%; Punjab 15.9% → 8.26%; Andhra Pradesh 21.1% → 9.20%; Gujarat 23.0% → 16.63%. [Q59]
- World Bank ke relevant assessment mein Bihar, Uttar Pradesh, Madhya Pradesh aur Odisha mein milkar country ke 50% se zyada poor people rehte the. [Q60]
- Poverty ratios 1993-94 → 2011-12: Punjab 11.77% → 8.26%; Bihar 54.96% → 33.74%; Uttar Pradesh 40.85% → 29.43%; Rajasthan 27.41% → 14.71%. [Q61]
- Planning Commission estimate mein Bihar ka poverty ratio 1993-94 mein 54.96% tha; 2011-12 mein ye 33.74% tha. [Q62]
- India State Hunger Index (ISHI) 2008 mein Madhya Pradesh ki condition worst thi; malnutrition aur infant-mortality situation Ethiopia/Chad jaise African-country levels se compare ki gayi thi. [Q63]
- Madhya Pradesh ko severe malnutrition ke historical context mein kabhi-kabhi 'Ethiopia of India' kaha gaya. [Q64]

EXAM TRAP — Poverty-Ratio Pairing

► 1993-94 poverty ratios: Punjab 11.77%, Bihar 54.96%, Uttar Pradesh 40.85%, Rajasthan 27.41%.

[Q61]

6. Poverty Eradication, DRDA, PDS & Rural Programmes

- Poverty eradication ke important methods mein population control, higher saving/capital formation aur productive activities mein more investment shamil hain. [Q65]
- India mein poverty extent ke estimates mein clear uniformity nahi thi: Seventh Plan estimate ne 1987-88 mein 29.9% population ko poor dikhaya, jabki expert-group estimate 39.3% tha. [Q66]
- District Rural Development Agencies (DRDA) ka main role rural poverty reduce karne wali programmes ko effectively implement karna aur inter-sectoral/inter-departmental coordination ensure karna hai. [Q67]
- Public Distribution System 1960s mein price-support programme ke roop mein start hua. Main objective essential commodities subsidised prices par provide karna tha. [Q68]
- PDS ka objective poor households ko lower prices par food security dena, hoarding/black marketing rokna aur excessive pricing control karna hai. [Q69]
- Rural-poverty programme timeline: TRYSEM—15 August 1979; IRDP—2 October 1980 nationwide implementation; NREP—October 1980. In programmes ka broad goal rural poverty aur unemployment reduce karna tha. [Q70]
- Mitigating Poverty in Western Rajasthan (MPOWER) programme IFAD, Rajasthan State Government aur Ratan Tata Trust ke cooperation se implement hua. Programme Jodhpur district mein operate hua aur December 2017 mein complete hua. [Q71]

7. Human Poverty Index & Multidimensional Poverty Index

- UNDP poverty ko broadly Income Poverty aur Human/Multidimensional deprivation ke forms mein dekhta hai. Income poverty quality-of-life necessities ki kami se related hoti hai. [Q72]
- UNDP ne Human Poverty Index (HPI) first time Human Development Report 1997 mein introduce kiya. 2010 se Human Development Report mein HPI ki jagah 10 deprivation indicators based Multidimensional Poverty Index (MPI) publish hona start hua. [Q73]
- UNDP approach mein sirf income measure karke poverty ka complete estimate nahi milta; education, health aur standard-of-living dimensions ko bhi measure karna necessary hai. [Q74]
- Human Poverty Index 1997 mein introduce hua. [Q75]
- Global Multidimensional Poverty Index (Global MPI) 100+ developing countries mein acute multidimensional poverty measure karta hai. Core dimensions health, education aur standard of living hain. [Q76]
- Global Multidimensional Poverty Index 2010 mein OPHI ne UNDP ke collaboration se develop kiya aur Human Development Report 2010 mein introduce hua. [Q77]
- National MPI mein 3 equal dimensions hain - Health, Education aur Standard of Living. Health mein nutrition, child/adolescent mortality aur maternal health; Education mein years of schooling aur school attendance; Standard of Living mein cooking fuel, sanitation, drinking water, housing, electricity, assets etc. include hote hain. [Q78]
- Multidimensional Poverty Index (MPI) 2010 mein OPHI aur UNDP ne develop kiya. MPI 3 dimensions—Health, Education aur Standard of Living—ke 10 indicators use karta hai: infant mortality, nutrition, years of schooling, school attendance, cooking fuel, sanitation, drinking water, electricity, housing aur assets. [Q79]

- Global MPI 100+ developing countries ke acute multidimensional poverty ko education, health aur standard-of-living deprivations ke through measure karta hai. [Q80]
- Developing countries mein poverty intensity measure karne ke liye MPI useful hai, kyunki ye Health, Education aur Standard of Living jaise multiple dimensions capture karta hai. [Q81]
- OPHI-UNDP Multidimensional Poverty Index household level par Education, Health, Assets aur Services se related deprivations ko capture karta hai. [Q82]
- Earlier multidimensional-poverty figure 53.7% tha; Human Development Report 2025 ke 2022 estimate mein India ki multidimensionally poor population 16.4% (233.67 million; survey year 2019-21 mein 231.83 million) thi. [Q83]

EXAM TRAP — HPI vs MPI — 1997 and 2010

- ▶ Human Poverty Index (HPI) HDR 1997 mein introduce hua.
 - ▶ 2010 se HPI ki jagah MPI aaya; Global MPI OPHI + UNDP collaboration se health, education aur standard-of-living deprivations measure karta hai, sirf income line nahi.
- [Q73, Q74, Q75, Q76, Q77, Q79, Q80]

8. Causes, Social Indicators, SHGs & Poverty-Alleviation Tools

- Same income-class ke earners mein time ke saath inequality badhe to iska matlab rich-poor gap widen ho raha hai—rich relatively richer aur poor relatively poorer ho rahe hain. [Q84]
- Poverty ke major causes inadequate economic growth, high population growth aur unemployment hain; increasing investment rate poverty ka cause nahi, generally reduction ka support factor hai. [Q85]
- Illiteracy, healthcare access ki kami aur employment opportunities ki kami social indicators of poverty hain; limited transport means ko is specific set mein social poverty indicator nahi maana gaya. [Q86]
- Poverty ke social indicators mein illiteracy, malnutrition se low immunity, health services ki kami, safe drinking water/sanitation access ki kami aur employment opportunities ki kami shamil hain. [Q87]
- Differential Rate of Interest (DRI) Scheme Central Government ne 1972 mein introduce ki; iska objective weaker sections ko concessional rates par loans provide karna tha. [Q88]
- May 2013 mein DAY-NRLM ke under Women Self Help Groups (SHGs) ko financially strengthen karne aur rural women empowerment ke liye Rs 3 lakh tak ke bank loans par 7% interest-rate support announce kiya gaya. [Q89]
- Dr. A.P.J. Abdul Kalam ko '2008 Hoover Medal' ke liye select kiya gaya; announcement March 2009 mein New York mein hui. [Q90]
- Self-Help Group idea Nobel Peace Prize winner Muhammad Yunus se associated hai; unhone 1976 mein Bangladesh mein Grameen Bank start kiya. SHGs/microfinance poverty alleviation, financial inclusion aur women empowerment ke important tools bane. [Q91]
- SAARC poverty-alleviation ministerial meeting April 2002 mein Islamabad, Pakistan mein hui; fourth ministerial meeting 2015 mein Thimphu, Bhutan mein organise hui. [Q92]
- Indian social structure ke major features mein high rural population, religious diversity, caste/sub-caste diversity, cultural diversity aur sex-ratio patterns shamil hain. Poverty socio-economic condition ko reflect karti hai, social-structure feature ke roop mein classify nahi ki gayi. [Q93]

9. Employment Growth, Educated Unemployment & Rural–Urban Link

- NITI Aayog paper 'Changing Structure of Rural Economy of India: Implications for Employment and Growth, 2017' mein rural aur urban worker productivity increase hui. Rural income per worker 2004-05 mein 37,273 se 2011-12 mein 1,01,755 hua. [Q94]
- India mein employment-growth rate historical context mein roughly 2.0% per annum ke around raha. [Q95]
- Unemployment badhne se income source unavailable hota hai, isliye poverty-line ke neeche jane wale logon ki sankhya badh sakti hai. [Q96]
- Educated unemployment ka highest percentage Kerala mein reported raha hai. [Q97]
- High development rate ke saath employment create hota hai, lekin vocational education/skill mismatch ki wajah se educated persons bhi unemployed reh sakte hain. [Q98]
- Financial help unemployed youth ko minimum requirements meet karne aur future plans execute karne mein support kar sakti hai; second assumption is logic se necessary nahi hai. [Q99]
- Rural areas mein low education/skills ki wajah se villages se migrate karne wale log cities mein aksar low-level jobs tak limited reh jate hain. [Q100]

10. Employment Structure & Organised-Sector Trends

- PLFS 2023-24 ke relevant State comparison mein descending order Assam > West Bengal > Nagaland > Meghalaya tha. [Q101]
- Economic Survey 2009-10 context mein 1994-2007 ke dauran organised-sector employment growth mein decline record hua, mainly public organised-sector employment ki decline ki wajah se. [Q102]
- Developing/underdeveloped economies mein structural unemployment common hai. Main cause available skills aur jobs ke beech mismatch hota hai; backward economic structure, limited capital aur labour abundance bhi important causes hain. [Q103]

11. Disguised / Hidden Unemployment & Usual Status

- Disguised unemployment mein labour ki marginal productivity zero hoti hai; worker ko remove karne par total output mein reduction nahi hota. [Q104]

- Disguised/hidden unemployment tab hota hai jab jitne workers se job ho sakti hai usse zyada persons employed hon. Economics mein term ka early use Joan Robinson se associated hai; technical sense mein marginal productivity near zero hoti hai. [Q105]
- Disguised unemployment mein additional worker ki marginal productivity zero ya near-zero hoti hai. [Q106]
- India mein disguised unemployment mainly primary sector—especially agriculture/allied activities—mein milta hai, kyunki land/natural resources par population pressure high hota hai. [Q107]
- India mein disguised unemployment mainly agricultural sector mein milti hai. [Q108]
- Rural India mein unemployment ke two common forms seasonal unemployment aur disguised unemployment hain. [Q109]
- Usual Status Unemployment pichhle 365 days ke work-status ko dekhta hai. Agar person year ke major part (183 days ya usse zyada) mein work nahi karta, to use 'usual status unemployment' category mein rakha jata hai. [Q110]

12. Measuring Unemployment — NSSO, WPR, LFPR & Elasticity

- NSS unemployment measurement ke three methods: Usual Principal Status—previous year ke major period (183+ days) mein work na milna while available/seeking work; Current Weekly Status—survey week mein gainful work na milna; Current Daily Status—day-wise employment availability ko measure karta hai. [Q111]
- India mein employment/unemployment data collection aur publication mein NSS/NSSO ka historically major role raha hai; current labour-market estimates PLFS framework se aate hain. [Q112]
- Employment elasticity (1999-2000 to 2009-10): Construction 1.13; Finance & Real Estate 0.66; Manufacturing 0.09; Agriculture 0.04; All Sectors 0.19. [Q113]
- Rapid population growth, skill deficiency aur manpower planning ki kami unemployment ke important causes hain; per-capita income increase unemployment ka direct cause nahi hai. [Q114]
- Worker Population Ratio (WPR) total population mein employed persons ka percentage hota hai; 100 people mein 40 employed hon to WPR 40% hoga. [Q115]
- Labour Force Participation Rate working-age population mein employed + work-seeking/willing persons ka ratio hai. Working-age population commonly 15-64 years, kuch Indian contexts mein 15-59 years, li jati hai. [Q116]

13. PLFS, Women's Employment & Recent Unemployment Trends

- PLFS 2023-24 mein rural women ka LFPR 2021-22 ke 27.2% se badhkar 2023-24 mein 35.5% hua; rural increase urban women ke comparison mein zyada tha. [Q117]
- Bihar mein working women ka sabse bada share self-employed category mein hai; bahut si women household enterprises mein helper ke roop mein kaam karti hain. PLFS employment ko self-employed, regular wage earners aur casual labourers categories mein classify karta hai; PLFS 2023-24 data mein Bihar ki working women mein self-employment dominant tha. [Q118]
- PLFS annual report July 2023-June 2024 mein 15+ age group ke Usual Status context mein male aur female labour-force participation rates mein increase dikhaya gaya. [Q119]
- MoSPI ke October 2023 data mein female labour-force participation rate 2017-18 ke 23.3% se badhkar 2022-23 mein 37.0% ho gaya. [Q120]
- NSS 2011-12 mein Current Daily Status unemployment rate 5.6% aur Usual Status unemployment rate 2.2% thi. [Q121]
- Employment-Unemployment Survey 2011-12 (68th Round) ke Current Daily Status basis par urban unemployment 5.5% aur rural unemployment 5.9% tha. [Q122]
- PLFS July 2023-June 2024 ke Usual Status (PS+SS) basis par 15+ age persons ki unemployment rate 3.2% thi. [Q123]

EXAM TRAP — Female Labour Participation — Year Context

- ▶ Older period mein female labour participation decline dikhaya gaya tha; PLFS 2023-24 mein later rise dikhai deta hai.
- ▶ FLFPR: 23.3% (2017-18) → 37.0% (2022-23) → 41.7% (2023-24, Economic Survey 2024-25 context).

[Q117, Q119, Q120]
