

INDIA : POPULATION — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Population Growth, Demographic Transition & Theories
2. Census History, Census 2011 & National Population Register
3. Population-Growth Phases & Demographic Divide
4. Population Size, State Rankings & Distribution
5. Decadal Growth & Population Characteristics
6. Population Density & Spatial Distribution
7. Literacy — India, States, Districts & Trends
8. Sex Ratio, Child Sex Ratio & Gender Indicators
9. Scheduled Castes, Scheduled Tribes & Tribal Demography
10. National Population Policy, TFR & Fertility
11. Death Rate, Birth Registration, IMR & Child Health
12. Age Structure, Dependency & Demographic Dividend
13. Religion, Household Size & Literacy Mission
14. Population Pressure, Environment & Resource Regions

1. Population Growth, Demographic Transition & Theories

- Natural population growth births aur deaths ke difference se aata hai; growth rate broadly crude birth rate minus crude death rate se express ki ja sakti hai. Demographic Transition Theory long-term population change ko high birth-high death stage se low birth-low death stage tak explain karti hai; Warren Thompson ne 1929 mein framework diya aur Frank Notestein ne later stages ko develop kiya. [Q1-Q4]
- Stable population structure mein birth rate aur death rate dono low aur controlled hote hain. India ka population growth high raha hai lekin trend declining hai; historical demographic-transition context mein death rate birth rate se faster decline karne ki wajah se population rapidly increase hui. [Q5-Q7]
- Malthus ke hisaab se population geometric progression mein aur food supply arithmetic progression mein badhti hai. Population checks positive/natural aur preventive dono ho sakte hain; Malthus moral restraint ko prefer karta tha. Theory mapping: Optimum Population—Edwin Cannan; Social Disequilibrium—Henry George; Demographic Transition—Thompson; Population-Food Supply—Malthus. [Q8-Q12]
- Rapid population growth resource consumption, waste aur pollution ke through environmental pressure badha sakta hai. Demographic characteristics mein density, sex ratio, rural-urban distribution, literacy, age structure aur life expectancy aate hain; standard of living demographic characteristic nahi hai. High density industrial/metropolitan regions se strongly associated hoti hai; sterilization reluctance mein son preference, high infant mortality, low awareness aur poverty jaise factors important rahe hain. [Q13-Q16]

2. Census History, Census 2011 & National Population Register

- India mein first non-synchronous Census 1872 mein Lord Mayo ke tenure mein complete hua; first regular, scientifically synchronized decennial Census 1881 mein Lord Ripon ke tenure mein hua. Iske baad Census generally every ten years conduct hota raha. [Q17-Q22]
- Census decennial exercise hai aur India ki population generally continuously badhi; 1921 exceptional Census year tha jahan decline record hua. Census 2011 India ka 15th national Census tha aur motto 'Our Census, Our Future' tha. NPR process mein photograph, fingerprints aur iris imaging ke liye minimum age 15 years rakhi gayi; caste inclusion issue par GoM Pranab Mukherjee ki chairmanship mein bana. [Q23-Q26]
- Census 2011 mein India ke 640 districts the; administrative reorganisation ke saath district count later badhta raha. [Q27]

EXAM TRAP — Census 1872 vs 1881

- ▶ 1872 Lord Mayo ke tenure mein first non-synchronous Census complete hua; 1881 Lord Ripon ke tenure mein first regular, synchronized decennial Census hua.
- ▶ 2021 Census COVID-19 ke karan delay hua; future Census schedule separate current-update fact hai; isliye historical first-Census fact ke saath current schedule mix na karein.

Q Coverage: Q17-Q22

3. Population-Growth Phases & Demographic Divide

- 20th-century population-growth phases: 1901-21 slow/stagnant; 1921-51 steady growth; 1951-81 rapid growth; 1981 onward high growth ke saath clear slowing trend. 1911-21 mein decadal growth -0.31% thi, jo minimum/negative decade tha. [Q28-Q31]
- Census 2011 final figures mein 2001-11 decadal population growth 17.7% thi. Highest decadal percentage growth 1961-71 mein 24.80% record hui; 1971-81 24.66%, 1981-91 23.87%, 1991-2001 21.54% aur 2001-11 17.7% raha. [Q32-Q37]
- 1921 ko India's demographic history ka 'Year of Great Divide' kaha jata hai, kyunki 1911-21 mein population growth negative thi aur uske baad continuous growth phase start hua. 1951 rapid-growth era ka important starting point hai, lekin Great Divide 1921 hi hai. [Q38-Q43]
- Annual exponential growth aur density dono long-term mein sharply badhe, lekin population-growth rate recent decades mein slow hui. Historical statements jaise India ka world-population share, China ko overtake karne ki expectation aur poverty share ko unke specific year/context ke saath read karna chahiye. [Q44-Q47]

EXAM TRAP — Great Divide = 1921, Not 1951

- ▶ 1911-21 decadal growth -0.31% thi; isi break ke baad continuous population growth start hui, isliye 1921 Year of Great Divide hai.
- ▶ 1951 se rapid-growth phase strong hua, lekin demographic Great Divide 1921 hi rehta hai.

Q Coverage: Q38-Q43

4. Population Size, State Rankings & Distribution

- India ki population Census 1991 mein about 846.42 million, Census 2001 mein 1,028.74 million aur Census 2011 mein 1,210.85 million thi. India world land area ka around 2.4% rakhta hai lekin world population ka much larger share hold karta hai; Census 2011 provisional data mein female share roughly 48% ke around thi. [Q48-Q52]
- Uttar Pradesh Census 2001 aur 2011 dono mein India ka most populous State raha. Census 2011 mein UP ka India population share about 16.5% tha; Maharashtra second, Bihar third aur West Bengal fourth large-population States the. [Q53-Q60]
- Census 2011 population order broadly Uttar Pradesh > Maharashtra > Bihar > West Bengal > undivided Andhra Pradesh tha. Uttar Pradesh, Maharashtra aur Bihar milkar India ki population ka one-third se zyada share rakhte the. [Q61-Q68]
- Maharashtra area ke hisaab se Rajasthan aur Madhya Pradesh ke baad third-largest State hai aur population mein second tha. Bihar ka Census 2011 population share roughly 8.6-9% tha. State/UT rankings mein year aur pre/post reorganisation context ko saath rakhna zaroori hai. [Q69-Q76]

- Small-population end par Sikkim least-populous State aur Lakshadweep least-populous Union Territory tha. Census 2011 state/UT comparisons mein Delhi high density aur Lakshadweep very small absolute population ke liye notable rahe. [Q77-Q83]

5. Decadal Growth & Population Characteristics

- Census 2011 mein States ke among highest decadal growth Meghalaya 27.9% thi; Bihar 25.4%, Arunachal Pradesh 26.0%, Rajasthan 21.3%, Madhya Pradesh 20.3% aur Uttar Pradesh 20.2% jaise figures rahe. 2001 Census context mein Nagaland ka growth rate exceptionally high tha. [Q84-Q92]
- Census 2011 mein lowest State growth Nagaland -0.6% thi; Kerala 4.9%, Goa 8.2%, Andhra Pradesh 11.0% aur Sikkim 12.9% low-growth States mein the. Bihar listed BIMARU States mein high growth ke liye notable tha. [Q93-Q100]
- UP ka 2001-11 final decadal growth 20.2% tha. Uttarakhand ke Pauri Garhwal aur Almora districts ne negative growth record ki. Kerala ka low growth high literacy, health outcomes aur lower fertility jaise demographic-transition factors se associated hai. [Q101-Q109]
- Population size aur density ko mix nahi karna chahiye: UP most populous State tha, jabki Census 2011 density mein Bihar highest tha. Large-district population examples mein Allahabad/Prayagraj, Moradabad, Ghaziabad aur Lucknow high-population districts the. [Q110-Q119]

6. Population Density & Spatial Distribution

- Census 2011 State-density extremes: Bihar 1,106 persons/sq km highest; West Bengal 1,028, Kerala 860, Uttar Pradesh 829 aur Haryana 573 next high-density States the. Arunachal Pradesh 17 persons/sq km ke saath least-dense State tha. [Q120-Q126]
- Density rankings Census year ke saath change hui: Census 2001 mein West Bengal 903 ke saath highest State tha, Census 2011 mein Bihar 1,106 ke saath top ho gaya. BIMARU group mein Bihar ki density highest thi; Bihar > Punjab > Jharkhand > Uttarakhand jaise listed orders Census 2011 data se bante hain. [Q127-Q136]
- Low-density States Census 2011: Arunachal Pradesh 17, Mizoram 52, Sikkim 86, Nagaland 119 aur Himachal Pradesh 123. North-Eastern States ke density comparisons mein census-year context important hai. [Q137-Q143]
- Union Territories mein Census 2011 density: Puducherry 2,547, Daman & Diu 2,191, Lakshadweep 2,149, Dadra & Nagar Haveli 700 aur Andaman & Nicobar Islands 46 persons/sq km. Andaman & Nicobar listed UTs mein lowest tha. [Q144-Q149]
- India ki density 2001 mein about 324/325 aur 2011 mein 382 persons/sq km thi. Bihar ke districts mein Sheohar 1,880, Patna 1,823, Darbhanga 1,728 aur Vaishali 1,717 persons/sq km high-density examples the. Effective literacy rate India mein age 7+ population ke liye calculate hoti hai. [Q150-Q155]

7. Literacy — India, States, Districts & Trends

- Census 2011 final literacy rate 73.0% thi; male 80.9% aur female 64.6%. Provisional overall figure 74.04% thi. Census 2001 literacy 64.8% thi; 1991-2001 mein literacy about 12.6 percentage points badhi. Kerala ne full literacy claim ki aur 2011 final literacy 94.0% thi; Serchhip/Aizawl/Mahe/Kottayam/Pathanamthitta top-literate districts mein the. [Q156-Q163]
- Census 2011 State literacy leaders: Kerala 94.0%, Mizoram 91.3%, Goa 88.7%, Tripura 87.2%, Himachal Pradesh 82.8%. Mizoram overall literacy aur urbanization dono mein very high rank rakhta hai. Historical 2001/1991 rankings ko same census context ke saath compare karna chahiye. [Q164-Q175]
- Low-literacy States Census 2011: Bihar 61.8%, Arunachal Pradesh 65.4%, Rajasthan 66.1%, Jharkhand 66.4%, Andhra Pradesh 67.0. Male-female literacy gap national level par roughly 16 percentage points tha; Meghalaya low gender-gap States mein aur some northern States high-gap group mein the. [Q176-Q185]
- Female literacy mein Kerala highest State (92.1% final 2011) aur Mizoram second; Bihar female literacy roughly 51.5% ke saath lowest State level par tha. Union Territories mein Lakshadweep high overall/female literacy ke liye notable tha. [Q186-Q197]
- Overall lowest State literacy Bihar thi. Union-Territory literacy rankings aur rural literacy ko Census year ke saath read karein; 1991/2001/2011 comparisons mein ranking change ho sakti hai. [Q198-Q205]
- Uttar Pradesh Census 2011 literacy 67.7% thi; male 77.3% aur female 57.2%. Most-literate districts mein Gautam Buddha Nagar 80.1%, Kanpur Nagar 79.7%, Auraiya 78.9% aur Etawah 78.4% the. Shravasti lowest overall literacy aur lowest female literacy districts mein tha. [Q206-Q215]
- India ka sex ratio long-term mein fluctuate hua: 1901 mein 972, 1991 mein 927, 2001 mein 933 aur Census 2011 final 943 females per 1,000 males. Largest listed decline 1961-71 decade mein hua. [Q216-Q219]

8. Sex Ratio, Child Sex Ratio & Gender Indicators

- Sex ratio Census 1951 mein 946, 1991 mein 927, 2001 mein 933 aur 2011 final mein 943 tha; 2011 provisional figure 940 thi. Census 2011 listed order Kerala > Puducherry > Tamil Nadu > Andhra Pradesh tha. [Q220-Q228]
- Kerala Census 2011 mein 1,084 females per 1,000 males ke saath highest State sex ratio rakhta tha; Puducherry 1,037 ke saath 1,000 se above UT tha. Tamil Nadu 996, Andhra Pradesh 993, Karnataka 973 jaise relatively high figures the; Jharkhand 949 national average se slightly above tha. [Q229-Q238]
- Low-sex-ratio States Census 2011 mein Haryana 879 lowest tha; Jammu & Kashmir 889, Sikkim 890, Punjab 895 aur Uttar Pradesh 912. Daman & Diu 618 ke saath UTs mein extremely low sex ratio rakhta tha. [Q239-Q247]
- 1991-2001 mein Daman & Diu ka sex ratio sharply 960 se 710 tak gira, jabki Arunachal Pradesh aur Uttarakhand jaise States mein improvement hui. UP sex ratio 2001 ke 898 se 2011 final 912 hua. Bihar districts mein Gopalganj 1,021 high sex-ratio district tha. [Q248-Q258]
- District-level extremes Census 2011 mein Mahe (Puducherry) about 1,184 highest aur Daman about 534 lowest cited figure tha. Low sex ratio ke causes social preferences ke saath biological birth pattern se bhi linked ho sakte hain. [Q259-Q260]
- Child sex ratio (0-6) India mein long decline dikhata hai: 1961 mein 976, 2001 mein 927 aur 2011 final mein 919. Census 2011 child sex ratio examples: Chhattisgarh 969, Bihar 935, UP 902, Rajasthan 888, Punjab 846, Haryana 834; rural overall sex ratio urban se higher tha. [Q261-Q268]

9. Scheduled Castes, Scheduled Tribes & Tribal Demography

- Census 2011 mein Scheduled Caste share Punjab 31.9% ke saath highest State tha; UP ka absolute SC population sabse bada tha, followed by West Bengal, Bihar, Tamil Nadu aur Andhra Pradesh. North-East ke kuch States, jaise Nagaland/Arunachal Pradesh, mein SC population nil ya extremely small thi. [Q269-Q274]
- Scheduled Tribes Census 2011 mein India ki total population ka 8.6% the. ST-share leaders mein Mizoram 94.4%, Nagaland 86.5%, Meghalaya 86.1% aur UT Lakshadweep 94.8% tha. Absolute ST population Madhya Pradesh mein largest thi, followed by Maharashtra/Odisha/Rajasthan in Census 2011 comparisons. [Q275-Q282]
- UP ka ST share 0.6% ke around very low tha. Bhil Census 2011 mein largest Scheduled Tribe aur Gond second-largest major tribal group tha; PVTG category earlier Primitive Tribal Groups ke naam se known thi aur 2009 se Particularly Vulnerable Tribal Groups term use hua. Punjab ka SC share aur Kerala sex ratio jaise State indicators ko mix nahi karna chahiye. [Q283-Q290]

10. National Population Policy, TFR & Fertility

- National Population Policy 2000 February 2000 mein announce hui. Immediate objective contraception/health infrastructure needs meet karna; medium-term goal replacement-level TFR 2.1 achieve karna; long-term goal sustainable population stabilization tha. Policy ne 2010 ke liye socio-demographic goals set kiye aur original stabilization horizon 2045 diya gaya. [Q291-Q298]
- Total Fertility Rate average children per woman ko measure karta hai; replacement-level fertility about 2.1 hai. India TFR NFHS-3 mein 2.7, NFHS-4 mein 2.2 aur NFHS-5 (2019-21) mein 2.0 tak decline hui; SRS Statistical Report 2023 figure mein TFR 1.9, rural 2.1 aur urban 1.5 diya gaya. [Q299-Q304]
- State TFR comparisons period ke saath change hote hain: NFHS-5 mein Bihar 3.0 aur Meghalaya 2.9 high the; SRS Statistical Report 2023 data mein Bihar 2.8, UP 2.6, MP 2.4, Rajasthan 2.3 aur Chhattisgarh 2.2 high side par the. Couple-protection rate younger couples mein increase hona birth-rate reduction ke liye effective hai; working women ki fertility generally lower hoti hai. [Q305-Q309]

! EXAM TRAP — NPP 2000 & Replacement-Level Fertility

- ▶ NPP 2000 ka medium-term target replacement-level TFR 2.1 achieve karna tha; long-term goal population stabilization tha.
- ▶ TFR data survey/year ke saath update hota hai—NFHS-5 2.0 aur SRS Statistical Report 2023 figure 1.9 hai; NPP target ko current observed TFR se mix na karein.

Q Coverage: Q291-Q304

11. Death Rate, Birth Registration, IMR & Child Health

- Population stabilization mein births aur deaths balance hote hain; migration include karne par births + in-migration = deaths + out-migration. SRS Statistical Report 2023 data mein India crude death rate 6.4 per 1,000 tha; State rates period ke saath vary karte hain. [Q310-Q313]
- Infant Mortality Rate one year se pehle hone wali infant deaths per 1,000 live births hai. SRS Statistical Report 2023 update mein India IMR 25 tha; Chhattisgarh, Madhya Pradesh aur Uttar Pradesh 37 ke saath high side par the. Birth Registration Act framework mein birth ko concerned authority ke saath 21 days ke andar register karna hota hai. [Q314-Q320]
- Historical IMR State comparisons mein Kerala/Goa low aur MP/UP/Odisha high rahe; later SRS data mein improvement hua. Eleventh Plan IMR target 28 aur Twelfth Plan target 25 per 1,000 live births tha. Child malnutrition, gender differences in infant mortality aur Youth in India reports ko year-specific data ke saath read karna chahiye. [Q321-Q329]

12. Age Structure, Dependency & Demographic Dividend

- Census 2011 mein young population share very large tha; below-14 population roughly 29% aur below-35 population final figures mein about 65.6% thi. Working-age population ka share rising demographic structure India ke demographic transition ka important feature hai. [Q330-Q334]
- Dependency ratio dependent population ko working-age population se compare karta hai. Indian context mein working age often 15-59 aur international convention mein 15-64 liya jata hai; children aur elderly dependants hote hain. Old-age dependency ratio long term mein rise kar raha hai, jabki overall dependency ratio demographic transition ke dauran decline hua. [Q335-Q336]
- Demographic dividend tab milta hai jab working-age share dependants ke comparison mein high ho. Is potential ko economic growth mein convert karne ke liye skill development, employment aur productivity essential hain. Population growth working population badha sakta hai, lekin land fragmentation, unemployment aur per-capita resource pressure adverse effects ho sakte hain. [Q337-Q344]
- Census 2011 mein persons with disabilities about 2.1% population the. March 2018 Union Ministry data mein India mein 413,670 beggars count hue; West Bengal highest aur Uttar Pradesh second-highest absolute count tha. [Q345-Q346]

13. Religion, Household Size & Literacy Mission

- Census 2011 religion data mein Christians about 27.8 million (2.3%) the; listed smaller communities ka population order Jain < Buddhist < Sikh < Christian tha. Muslim absolute population Uttar Pradesh mein highest thi; Christian population share Nagaland, Mizoram aur Meghalaya mein very high tha; Buddhist absolute population Maharashtra mein largest thi. [Q347-Q352]
- Religion-wise sex ratio Census 2011 comparisons mein Christians 1,023, Buddhists 965, Jains 954 aur Muslims 951; Sikh community 903 ke saath lowest religious-group sex ratio cited thi. Jain community highest literacy religious groups mein tha. [Q353-Q355]
- Household-size Census 2001/2011 comparisons mein Uttar Pradesh ka average household size relatively high aur Tamil Nadu low tha. Census normal, institutional aur houseless households ko distinguish karta hai. National Literacy Mission 5 May 1988 ko launch hua; Andaman tribes ko Negrito affinities ke context mein discuss kiya gaya. [Q356-Q358]

14. Population Pressure, Environment & Resource Regions

- Rapid population growth food-production pressure, pesticide/fertilizer use, settlement expansion aur habitat loss ke through birds/wildlife ko affect kar sakta hai. Floods, pollution aur cultivable-land pressure population growth se intensify ho sakte hain; wildlife increase iska expected consequence nahi hai. [Q359-Q360]
- Ganga Plain India aur world ke densely populated regions mein hai. Progressive population-resource regions ke examples mein West Bengal delta, Maharashtra-Gujarat Deccan Trap, Tamil Nadu, Punjab Plain/Ganga-Yamuna Doab aur south-eastern Karnataka plateau shamil hain. [Q361-Q362]

Exam Fusion Prep · examfusionprep.com · India Population Full Mind Map
