

INDIA : URBANIZATION — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Urbanization Basics, Causes & India's Urban Transition
2. Census Urban Definition, Urban Growth & Urban Share
3. State/UT-wise Urban Population & Urbanization Rankings
4. Rural–Urban Population, Children & Occupational Structure
5. Town Classes, Million-Plus Cities & Urban Agglomerations
6. Metropolitan Patterns, Migration & Urban Corridors
7. Urban Problems, Slums & Urban Institutions
8. Urban Infrastructure, JNNURM, Smart Cities & Committees

1. Urbanization Basics, Causes & India's Urban Transition

- Town aur village social values, family structure, lifestyle aur economic activities mein differ karte hain. Rural community relatively homogeneous aur primary activities oriented hoti hai, jabki urban life diversity, secondary/tertiary activities aur complex social structure se associated hai. [Q1-Q5]
- Urbanization ke major drivers rural-to-urban migration, industrialization, education/employment opportunities aur urban services hain. India ka urbanization level developed/highly urbanized countries se lower hai; Census 2001 urban share 27.8% aur Census 2011 final share about 31.1% tha. Infrastructure urban growth ke proportional na badne se housing, water, sanitation, transport aur pollution problems intensify hote hain. [Q6-Q12]
- India ki absolute urban population developed countries ke total population se bhi large ho sakti hai, lekin urbanization percentage comparatively lower rehta hai. 2011 mein urban population about 377.1 million thi. Urbanization birth rate reduce karne, organized services/consumption access aur secondary-tertiary employment expand karne mein role play karta hai; regional pattern uniform nahi hai. [Q13-Q20]

2. Census Urban Definition, Urban Growth & Urban Share

- First Census 1872 aur regular decennial Census 1881 se linked hai. India mein 1931-61 ko moderate urbanization phase kaha gaya; urban population growth-rate 1971-81 decade mein about 46.1% ke saath peak par thi, while 2001-11 growth about 31.8% thi. [Q21-Q23]
- Census Town ke three core criteria: minimum population 5,000; at least 75% male main workers non-agricultural work mein; population density minimum 400 persons/sq km. Statutory towns municipality/corporation/cantonment/notified-town status se urban count hote hain. Census 2011 final Census Towns 3,892 the, up from 1,362 in 2001. [Q24-Q26]
- Census 2011 final India population 1.21085 billion thi: rural 833.75 million (68.9%) aur urban 377.11 million (31.1%). Provisional urban share 31.16% thi; absolute urban population roughly 37.7 crore thi. [Q27-Q31]

EXAM TRAP — Census Town Definition

- ▶ Census Town: population $\geq 5,000$; $\geq 75\%$ male main workers non-agricultural work mein; density ≥ 400 persons/sq km.
 - ▶ Municipality/corporation/cantonment/notified town statutory status se settlement urban count hota hai; 10 sq km minimum-area condition Census Town criterion nahi hai.
- Q Coverage: Q24-Q26

3. State/UT-wise Urban Population & Urbanization Rankings

- Religious groups, States aur UTs ka urban share widely vary karta hai. Maharashtra aur Uttar Pradesh absolute urban-population leaders mein rahe; South/West India ke several States higher urbanization percentages show karte hain, jabki small North-Eastern States ka absolute urban population low ho sakta hai. [Q32-Q39]
- Census 2011 mein Goa 62.2% ke saath most urbanized State tha; Mizoram, Tamil Nadu, Kerala aur Maharashtra high-urbanization group mein the. Maharashtra ka absolute urban population largest tha. State aur Union Territory category alag rakhtay hain—Delhi/Chandigarh high-urbanization UTs hain, States nahi. [Q40-Q50]
- Census 2011 State comparisons mein Tamil Nadu, Maharashtra, Gujarat, Kerala aur West Bengal relatively high urban shares dikhatay hain; Himachal Pradesh around 10% ke saath least-urbanized State tha. Landlocked-State comparisons aur 2001-vs-2011 rankings ko census-year ke saath read karein. [Q51-Q60]
- District/UT comparisons mein highly urban districts and UTs separate category hain. Chandigarh/Delhi/Daman-Diu/Lakshadweep jaise UTs ka urbanization level high ho sakta hai; village-count aur urban-share facts UT-specific hain. [Q61-Q64]

EXAM TRAP — State vs Union Territory Urbanization

- ▶ Census 2011 States mein Goa 62.2% ke saath most urbanized tha; Maharashtra absolute urban population mein leader tha.
 - ▶ Delhi/Chandigarh jaise Union Territories ko State ranking ke saath mix na karein; State-vs-UT category answer change kar sakti hai.
- Q Coverage: Q40-Q50

4. Rural–Urban Population, Children & Occupational Structure

- Census 2011 final rural share 68.9% aur urban share 31.1% tha; provisional figures 68.84/31.16 ke around the. Census 2001 rural share about 72.2% aur urban share 27.8% tha. Independence ke baad first time 2001-11 decade mein absolute population increase urban areas mein rural areas se higher hua. [Q65-Q66]
- Rural aur urban population State-wise composition sharply differ karti hai. Children, sex ratio, literacy aur occupational structure bhi rural-urban transition se linked hain; rural workforce mein primary-sector employment ka share high, urban workforce mein secondary/tertiary activities ka share higher hota hai. [Q67-Q79]

EXAM TRAP — Rural vs Urban Share — Census 2011

- ▶ Census 2011 final share: rural 68.9%, urban 31.1%; provisional figures around 68.84% and 31.16% the.
 - ▶ Census 2001 rural share about 72.2% thi. Final, provisional aur older Census figures ko ek hi value samajhkar mix na karein.
- Q Coverage: Q65-Q66

5. Town Classes, Million-Plus Cities & Urban Agglomerations

- Census urban settlements population size ke basis par Class I, II, III etc. categories mein divide hote hain; Class I towns 100,000+ population rakhte hain. Urban agglomeration contiguous urban spread hota hai jo core town/city aur adjoining outgrowths ko include kar sakta hai. [Q80-Q89]
- Million-plus urban agglomerations ki number 2001 mein 35 se badhkar 2011 mein 53 hui. Mumbai, Delhi, Kolkata, Chennai, Bengaluru, Hyderabad, Ahmedabad jaise major metropolitan centres high-population urban agglomerations rahe. [Q90-Q99]

- UP ke million-plus cities Census 2011 mein Kanpur, Lucknow, Ghaziabad, Agra, Varanasi, Meerut aur Allahabad/Prayagraj the. Listed 2011 urban-population comparisons mein Lucknow > Agra > Meerut > Allahabad; Ghaziabad major urban agglomeration tha. Kota 53 million-plus UAs list ke lower end par tha. [Q100-Q109]

6. Metropolitan Patterns, Migration & Urban Corridors

- Metropolitanization large urban centres mein population/economic activity concentration ko reflect karti hai. Philip M. Hauser ne population concentration ko Population Implosion, ethnic mixing ko Displosion aur rapid population increase ko Explosion jaise terms se distinguish kiya. [Q110-Q116]
- Lee migration theory push aur pull factors use karti hai. Rural-to-urban migration ko employment, education, health aur better urban facilities pull karte hain; rural problems push kar sakti hain. India mein rural-to-rural migration overall largest stream raha, women rural-rural migration mein high share rakhti hain, aur Delhi ko major migrants UP se mile. [Q117-Q123]
- Urban corridors transport-network expansion ke saath urban activities ke linear/connected growth ko describe karte hain. Rapid urbanization/industrialization social dislocation, relative deprivation aur crime/family-value stress bhi create kar sakte hain. [Q124-Q126]

7. Urban Problems, Slums & Urban Institutions

- Rapid urban population concentration peri-urban settlements badhata hai aur service quality par pressure dalta hai. Rural migrants low-skill jobs aur inadequate housing ki wajah se urban poverty mein disproportionately represented ho sakte hain. [Q127-Q129]
- Census 2011 mein Greater Mumbai slum-household share about 41.3% tha; India ki total slum population about 65.5 million, urban population ka around 17.4% thi. Slum-population share mein Maharashtra, Andhra Pradesh, West Bengal, Uttar Pradesh aur Tamil Nadu major contributors the; slum-reporting towns ki number Tamil Nadu mein highest thi. [Q130-Q133]
- India Urban Observatory New Delhi mein Ministry of Housing and Urban Affairs ke under located hai. India Sanitation Coalition 2015 mein FICCI aegis ke under launch hui; NIUA 1976 mein establish national urban-planning/development platform hai. [Q134-Q135]

8. Urban Infrastructure, JNNURM, Smart Cities & Committees

- Urban infrastructure mein drinking water, sanitation, transport, sewerage, solid-waste systems aur related basic services major components hain. Swachh Bharat Mission, HRIDAY aur Smart Cities Mission urban-infrastructure improvement se related programmes hain; Digital India broader public-service digitisation programme hai. [Q136-Q137]
- Jawaharlal Nehru National Urban Renewal Mission (JNNURM) 2005 mein launch hua. Focus urban infrastructure/governance aur Basic Services to Urban Poor par tha; water, sanitation, sewerage, solid waste, roads/urban transport aur slum development key components the. Original seven-year period March 2012 tak tha, later ongoing projects ke liye extensions hui. [Q138-Q142]
- Smart Cities Mission ka aim technology/data based smart solutions, local-area development, better infrastructure, economic growth aur quality of life improve karna tha; first phase mein 100 smart cities target the. Urban-policy committee chronology: Local Finance Enquiry Committee 1949-51; Taxation Enquiry Commission 1953-54; Rural-Urban Relationship Committee 1963-66; National Commission on Urbanization 1985-88. [Q143-Q145]
