

# WORLD : POPULATION & URBANIZATION — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

## Topics in this chapter:

1. World Population History, Demography & World Population Day
2. Population Distribution, Country Rankings & Global Shares
3. Population Growth, Density, Sex Ratio, Religion & Literacy
4. World Urbanization Levels, Regions & Countries
5. Megacities, Technopolis & Urbanization Theory
6. Migration, Fertility, Birth Rate, Mortality & Life Expectancy
7. Family Planning & Biodiversity

## 1. World Population History, Demography & World Population Day

- 10,000 BC world population ka single exact estimate nahi hai—different scholars ne around 1-10 million range ke estimates diye. Demography population size, distribution, composition, births, deaths, migration aur social mobility ka quantitative + qualitative study hai. Robert Redfield ne Folk-Urban Continuum Mexico ke community studies se develop kiya. [Q1-Q5]
- UNFPA State of World Population report publish karta hai. World population 7 billion mark 31 October 2011 se associated hai; World Population Day 11 July ko observe hota hai, 1987 ke Five Billion Day ki memory mein. Themes year-specific hote hain—2015 Vulnerable Populations in Emergencies, 2017 Family Planning: Empowering People, 2024 To Leave No One Behind, Count Everyone, aur 2025 youth/family-choice empowerment theme. [Q6-Q11]

### EXAM TRAP — 10,000 BC World Population — No Single Exact Estimate

- ▶ Different scholars ne 10,000 BC world population ke liye different estimates diye: roughly 2 million, 4 million aur 1-10 million range.
- ▶ Isliye is ancient-population fact ko ek single exact universally accepted number ke roop mein memorize nahi karna chahiye.

Q Coverage: Q1

## 2. Population Distribution, Country Rankings & Global Shares

- World population ka large concentration Northern Hemisphere aur 20°N-40°N belt mein hai. India Census 2011 context mein world population ka about 17.5% tha. UNFPA 2025 estimate: world population about 8.232 billion; India about 1.464 billion, China about 1.416 billion. World Population Prospects 2022 projection 2050 ke liye around 9.7 billion hai. [Q12-Q18]
- UNFPA 2025 population ranking: India > China > United States > Indonesia > Pakistan > Nigeria > Brazil > Bangladesh > Russia > Mexico. Nigeria Africa ka most populous country aur Indonesia world ka most populous Muslim-majority country hai. Indonesia > Pakistan > Nigeria > Brazil listed order current estimates mein fit hota hai. [Q19-Q28]

## 3. Population Growth, Density, Sex Ratio, Religion & Literacy

- Recent population-growth rate continents mein Africa highest aur Europe lowest/negative side par hai. Asia ke subregions mein Central/West Asia comparatively faster growth dikhate hain; Japan, South Korea aur Italy low fertility, ageing ya population-decline concerns ke liye notable hain. Low density automatically overpopulation imply nahi karti—carrying capacity and resources matter karte hain. [Q29-Q34]
- Asia listed continents mein highest population density rakhta hai; Australia/Oceania lowest-density continent group mein hai. Country density extremes physical geography aur settlement pattern se linked hain; Nile Valley aur Java mein fertile land, water availability aur intensive agriculture high density ko support karte hain. [Q35-Q44]
- Sex ratio countries mein highly variable hai; migration-heavy Gulf economies mein male-dominated ratios common hain, jabki some European countries female-majority ratios dikhate hain. Global religious-population order aur South Asian literacy rankings year aur dataset ke saath change ho sakte hain. [Q45-Q49]

## 4. World Urbanization Levels, Regions & Countries

- World urbanization steadily increase hui: World Urbanization Prospects 2018 mein 2018 urban share 55.3% aur 2030 projection about 60.4% thi; World Bank 2024 around 58% urban share report karta hai. World urban population 2007 ke around rural population se exceed kar gayi. Urbanization curve ka rapid stage industrial/economic transition se linked hai. [Q50-Q53]
- UN-Habitat socially aur environmentally sustainable towns/cities, adequate shelter, water, sanitation aur poverty reduction support karta hai; partners sirf governments tak limited nahi. City prosperity ko multiple economic, social, infrastructure aur environmental dimensions se assess kiya jata hai. [Q54-Q57]
- Urbanization region/country-wise wide variation dikhata hai. Singapore/Hong Kong/Macao/Kuwait jaise places near-100% urban ho sakte hain; South America mein Uruguay very high urban share rakhta hai. South Asia mein 2024 World Bank figures roughly Bhutan 43%, Pakistan 39%, India 35%, Sri Lanka 20%; West Asia listed comparison mein Kuwait 100% urban tha. [Q58-Q66]

### EXAM TRAP — World Urbanization Figures are Year-Specific

- ▶ World Urbanization Prospects 2018: 2018 urban share 55.3%, 2030 projection 60.4%, 2050 projection around 68.4%.
- ▶ World Bank/other newer reports later years ke different observed values dete hain; report-year aur projection-year ko saath padhein.

Q Coverage: Q50-Q53

## 5. Megacities, Technopolis & Urbanization Theory

- The World's Cities in 2025 report ke updated ranking mein Jakarta largest city/urban agglomeration cited hai, followed by Dhaka, Tokyo aur New Delhi. India ke top-10 global-city list mein New Delhi aur Kolkata included hain. Technopolis technology/research-oriented city hota hai; Silicon Valley classic example aur Bengaluru India ka technopolis/Silicon Valley kaha jata hai. [Q67-Q70]
- Industrialization historically urbanization ko drive karti hai. Developing countries mein urban growth economic development se faster ho to over-urbanization/slum pressure create ho sakta hai. Western urban gender patterns mechanised agriculture aur urban employment opportunities se influence hote hain; female labour-force participation countries mein vary karti hai. [Q71-Q74]

## 6. Migration, Fertility, Birth Rate, Mortality & Life Expectancy

- World Migration Report 2024 mein international migrants about 281 million, world population ka 3.6% the. Migrant-population percentage regionally Oceania high hai; country shares mein UAE about 88%, Qatar 77% aur Kuwait 73% extremely high hain. Absolute migrant numbers Europe aur North America mein bhi very large hain. [Q75-Q77]
- China ki fertility one-child policy period ke baad sharply decline hui; updated UN data around 1.0 TFR dikhata hai. Listed low-fertility countries mein China/Italy very low hain. 2025 crude birth-rate comparison mein Afghanistan high, Pakistan next, Bangladesh aur India lower side par the. [Q78-Q81]

- Life expectancy listed countries mein Japan among highest (~85 years in 2025). Japan negative natural-growth/ageing challenge face karta hai. South Asia maternal mortality and elderly shares country-wise vary karte hain; Sri Lanka elderly share relatively high hai. Around 80% world population historically adequate social-security protection se outside batayi gayi; South Asia poverty rankings report-year sensitive hain. [Q82-Q88]

### ⚠ EXAM TRAP — Migration — Share vs Absolute Number

- ▶ World Migration Report 2024: international migrants about 281 million, 3.6% of world population; Oceania region migrant-share percentage mein high hai.
- ▶ Country migrant-share percentage mein UAE/Qatar/Kuwait top-side par hain, jabki absolute migrant population ka regional ranking alag ho sakta hai.

Q Coverage: Q75-Q77

## 7. Family Planning & Biodiversity

- India ne 1952 mein world ka first official national family-planning programme launch kiya; objective birth rate ko reduce karke population ko economy-compatible level par stabilize karna tha. [Q89-Q90]
- Biodiversity estimates exact nahi hain: about 1.5-1.8 million species formally named hain, jabki estimated total species several million ho sakte hain; different scientific estimates much higher totals bhi suggest karte hain. [Q91]
