

INDIA AND THE TROPIC OF CANCER — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. States the Tropic of Cancer Passes Through
2. Nearest/Farthest Cities & Latitude Comparisons
3. Statements True/False about the Tropic of Cancer
4. Day-Length & Season Effects
5. Rivers Crossing the Tropic of Cancer

| 1. States the Tropic of Cancer Passes Through

- Tropic of Cancer ($23^{\circ}30' N$) bhaarat ke **8 states** se guzarti hai: **Gujarat, Rajasthan, Madhya Pradesh, Chhattisgarh, Jharkhand, West Bengal, Tripura aur Mizoram** — is poori list ko yaad rakhna zaroori hai. *[Q1, Q3, Q4, Q5, Q6, Q7, Q12]*

EXAM TRAP — Bihar vs Jharkhand (state-reorganization wala trap)

- Purane U.P./Bihar-era questions mein 'Bihar' option milta hai kyunki **2000 se pehle Jharkhand, Bihar ka hissa tha**. Agar options mein 'Jharkhand' hai to Jharkhand sahi hai; agar sirf purana 'Bihar' hi diya ho to wahi legacy-correct maana jaata hai. Manipur, Uttar Pradesh, Odisha, Himachal Pradesh, Jammu & Kashmir — inme se koi bhi Tropic of Cancer se NAHI guzarta. *[Q1, Q2, Q6, Q7, Q12]*

| 2. Nearest/Farthest Cities & Latitude Comparisons

- Tropic of Cancer ke sabse nazdeek cities (unke latitude ke basis par): **Gandhinagar ($23^{\circ}19' N$)** — sabse kareeb; iske alawa **Jabalpur ($23^{\circ}11' N$)** aur **Kolkata ($22^{\circ}30' - 22^{\circ}37' N$)** bhi close options mein diye jaate hain — sabse kam latitude-difference wala city hi sahi answer hota hai. *[Q8, Q9, Q14]*
- Jun mein sabse zyada din-lambai (day length) uss jagah hoti hai jo **sabse north mein** ho — diye gaye options (Hyderabad, Chennai, Bhopal, Delhi) mein **Delhi** sabse north hai, isliye Delhi mein June mein sabse lamba din hota hai. *[Q13]*

| 3. Statements True/False about the Tropic of Cancer

- Tropic of Cancer ($23^{\circ}30' N$) desh ko **do halves mein baantti hai** — ye statement TRUE hai. Lekin ye India ki international boundary ko do halves mein nahi baantti (FALSE), aur India ka max east-west expansion bhi exactly isi line ke saath nahi hai (FALSE). *[Q10, Q11]*
- India ka easternmost point **Kibithu (Arunachal Pradesh)** aur westernmost point **Guhar Moti (Gujarat)** hai — inhe jodne wali line Tropic of Cancer ke **north** mein padti hai (statement TRUE). *[Q11]*

| 4. Day-Length & Season Effects

- 21 June (summer solstice) ko sun directly Tropic of Cancer ke upar hota hai aur north pole sun ki taraf tilt hota hai — isliye northern hemisphere mein jitna north jaoge, June mein utna lamba din milega. *[Q13]*

5. Rivers Crossing the Tropic of Cancer

- Sirf **Mahi River** hi aisi Indian river hai jo Tropic of Cancer ko **do baar** cross karti hai — ye M.P. se nikalti hai aur Rajasthan, Gujarat se hote hue Arabian Sea (Gulf of Khambhat) mein girti hai. *[Q15]*
