

NATURAL VEGETATION — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Birch, Katha (Khair) & Other Named Trees
2. Tropical Dry Deciduous — India's Largest Forest Type
3. Teak & Sal Products
4. Altitude-Based Vegetation Change in Himalaya
5. Soil Erosion Sequence (Cross-Reference)
6. Tree-Line Height — Western vs Eastern Himalaya
7. Western Himalayan Region — Forest Resources
8. Deodar — Western Himalaya's Temperate Tree
9. Southern vs Northern Slopes — Vegetation Density
10. Cinchona — Not Found in Chhattisgarh
11. 'Flame of the Forest' — Butea Monosperma
12. Teak Forest States (MP Highest)
13. Flowerless Plants — Fern
14. Alpine Vegetation Height Difference (East vs West)
15. Oryx vs Chiru — Antelope Habitat Difference
16. Tree-Region Match Sets (Teak, Deodar, Sundari, Cinchona)
17. Sundarbans — Littoral/Tidal Forest Type
18. Sandalwood, Sundari & Region Match
19. Forest Type-Region Match Set
20. Tropical Thorn Forest — Western Andhra Pradesh
21. Deodar — Highest Elevation Tree (1500-3000m)
22. Map — Sal Forests Threatened by 1997 Epidemic
23. Subtropical Forest — Madhya Pradesh
24. Mahogany — Not Himalayan Vegetation
25. Khejri — Social Forestry Multipurpose Tree
26. Victoria Falls (Cross-Reference, Africa)
27. Lisa (Resin) — Pine Tree Product
28. Mangrove-State Match Sets (Maharashtra to Odisha)
29. Vembanad — Kerala (Not Karnataka)
30. Tropical Rainforest — Assam & Kerala
31. Dense Deciduous Forest — MP & West Champaran
32. Khair — Sub-Tropical Forest Tree
33. Highest Forest % State — Mizoram
34. Sita Nadi Sanctuary — Sal Forest

1. Birch, Katha (Khair) & Other Named Trees

- Birch tree **Himalayas** mein paayi jaati hai (iski white paper-jaisi bark ancient scripts likhne ke liye use hoti thi). **Katha (kattha) Khair wood se banta hai** — Himalaya se South India tak arid regions mein ugta hai. [Q1, Q2]

2. Tropical Dry Deciduous — India's Largest Forest Type

- India mein **Tropical Dry Deciduous forest sabse bada forest type** hai (43.85% forest area, 8.53% country area) — **70-100cm annual rainfall wale areas** mein milta hai, isse 'monsoon forest' bhi kehte hain. [Q3, Q5]

3. Teak & Sal Products

- Teak aur Sal **Tropical Deciduous Forests** ke products hain. [Q4]

4. Altitude-Based Vegetation Change in Himalaya

- Himalaya mein altitude ke saath vegetation change hoti hai — reasons: **temperature ki kami, rainfall forms mein change, unfertile soil** (strong winds is combination mein include NAHI hai). [Q6]

5. Soil Erosion Sequence (Cross-Reference)

- Soil loss ka increasing order: **Splash erosion → Sheet erosion → Rill erosion → Gully erosion** (Soil Erosion chapter se cross-reference). [Q7]

6. Tree-Line Height — Western vs Eastern Himalaya

- Tree-line height **Eastern/Central Himalaya** mein ~3600-3800m hai — **Western Himalaya** mein ye kam (~3300-3600m) hai. [Q8]

7. Western Himalayan Region — Forest Resources

- Western Himalayan region ka **main resource** — **Forest (~65% area cover)** hai — metallic, non-metallic ya atomic minerals se zyada. [Q9]

8. Deodar — Western Himalaya's Temperate Tree

- Western Himalaya ke temperate zone mein **Deodar** **sabse abundant tree hai** (1500-2500m elevation) — **Deodar samudra-tal se 1500-3000m ki sabse ooncha elevation par milta hai** (Chir ~900-1000m, Sal sub-Himalayan/central India mein, Teak MP-Chhattisgarh-Odisha mein). [Q10, Q25]

9. Southern vs Northern Slopes — Vegetation Density

- Himalaya ke **Southern slopes** par **northern slopes** se zyada dense vegetation hai (Assertion galat hai — northern slopes ki baat kahi gayi thi) — kyunki **southern slopes** mein **northern** se zyada **rainfall aur sunlight** **multi hai** (Reason sahi hai). [Q11]

10. Cinchona — Not Found in Chhattisgarh

- Cinchona (evergreen tropical plant) **Chhattisgarh** mein **NAHI ugta** (Chhattisgarh tropical dry/monsoon forests ke liye suited hai) — **Assam, Kerala, West Bengal** mein milta hai. [Q12]

11. 'Flame of the Forest' — Butea Monosperma

- 'Flame of the forest' **Butea monosperma** (Dhak/Palash) ko kaha jaata hai — **UP ka State Flower** bhi hai. [Q13]

12. Teak Forest States (MP Highest)

- Teak forest **Madhya Pradesh, Karnataka, Uttar Pradesh** teeno mein milta hai — **maximum Teak forest MP mein hai** (disputed question, options mein sab 3 states honi chahiye). [Q14]

13. Flowerless Plants — Fern

- Fern ek vascular plant hai jo spores se reproduce karta hai — **na seeds hote hain na flowers** (Jackfruit, Fig, Orchid mein flowers hote hain). [Q15]

14. Alpine Vegetation Height Difference (East vs West)

- Western Himalaya mein alpine vegetation **3000m tak** hai, Eastern Himalaya mein **4000m tak** — reason: Eastern Himalaya equator aur sea-coast ke zyada kareeb hai (isliye snowline zyada ooncha hai). [Q16]

15. Oryx vs Chiru — Antelope Habitat Difference

- Oryx aur Chiru mein difference: **Oryx hot/arid areas mein adapt hai, Chiru cold high-mountain steppes/semi-desert areas mein adapt hai.** [Q17]

16. Tree-Region Match Sets (Teak, Deodar, Sundari, Cinchona)

- Match set: **Teak — Central India (MP/Chhattisgarh/Odisha), Deodar — Himalayan Tarai (western Himalaya, 1500-3000m), Sundari — Sunderban, Cinchona — high altitude Himalaya regions (also Terai).** [Q18, Q20]

17. Sundarbans — Littoral/Tidal Forest Type

- Sundarbans **Littoral ya Tidal (Mangrove) forest** hai — tropical dry deciduous, alpine, subtropical pine forest NAHI. [Q19]

18. Sandalwood, Sundari & Region Match

- Sahi pair: **Sundari — West Bengal (Sundarbans) — Teak-J&K, Deodar-MP, Sandalwood-Kerala GALAT hain.** [Q20]

19. Forest Type-Region Match Set

- Forest-region match: **Tropical moist deciduous — Tarai, Tropical dry deciduous — Middle Ganga Plain, Alpine — Arunachal Pradesh, Tropical evergreen — Sahyadris.** [Q21]
- Ek aur set (disputed): **Tropical forest — Silent Valley, Conifer forest — Himachal Pradesh, Mangroves — Sunderbans, Deciduous forest — Rajasthan.** [Q22, Q23]

20. Tropical Thorn Forest — Western Andhra Pradesh

- Long roots/sharp thorns wale stunted forests (low rainfall <70cm, low humidity <50%, high temp 25-30°C) — **Western Andhra Pradesh mein milte hain** (Rajasthan, SW Punjab, W Haryana, Kutch-Saurashtra mein bhi). [Q24]

21. Deodar — Highest Elevation Tree (1500-3000m)

- Deodar trees **Western Himalaya mein sea level se 1500-3000m ki sabse zyada uchai par milte hain** — Chir (900-1000m), Sal (sub-Himalayan/Central India east/Tamil Nadu), Teak (MP/Chhattisgarh/Odisha/Karnataka/TN/Gujarat/Maharashtra) inse kam uchai par. [Q25]

22. Map — Sal Forests Threatened by 1997 Epidemic

- Map mein '3' se marked jagah **Sal forests hain jo 1997 mein ek gambhir mahamari (tree pest) se threatened hui thin** — inse ped kamzor hue, forest loss hua. [Q26]

24. Subtropical Forest — Madhya Pradesh

- Subtropical (tropical dry deciduous) forest ka expansion **Madhya Pradesh ke zyadatar hisso** mein hai. [Q27]

24. Mahogany — Not Himalayan Vegetation

- Juniper, Silver fir, Spruce Himalayan vegetation ki species hain — **Mahogany NAHI hai (ye North/South America ki species hai)**. [Q28]

25. Khejri — Social Forestry Multipurpose Tree

- Social forestry ka multipurpose tree example **Khejri** hai — 'desert ka raja' bhi kehlata hai, frost/drought-resistant hai, fuel/fodder/manure sab deta hai. [Q29]

26. Victoria Falls (Cross-Reference, Africa)

- Victoria Falls **Zambezi River par, Zambia-Zimbabwe border par** hai (Mozambique se NAHI) — 'Smoke that Thunders' kehlata hai, 1989 mein World Heritage List mein aaya. [Q30]

27. Lisa (Resin) — Pine Tree Product

- Lisa (resin/raal) **Uttarakhand ke Pine trees** se milta hai — turpentine oil banane mein use hota hai, rural economy ka base hai. [Q31]

28. Mangrove-State Match Sets (Maharashtra to Odisha)

- Mangrove areas ka match: **Achra Ratnagiri — Maharashtra, Kundapur — Karnataka, Pichavaram — Tamil Nadu, Vembanad — Kerala** (West Bengal — Sunderbans, Odisha — Bhitarkanika/Devi/Dhamra/Chilika). [Q32]

29. Vembanad — Kerala (Not Karnataka)

- Sundarbans-WB, Bhitarkanika-Odisha, Pichavaram-TN sahi hain — **Vembanad Kerala mein hai (Karnataka mein NAHI)**. [Q33]

⚠ EXAM TRAP — Vembanad — Kerala mein hai, Karnataka mein NAHI (common wrong-pair)

30. Tropical Rainforest — Assam & Kerala

- Tropical rainforests **Assam aur Kerala** mein hain — Western Ghats, Lakshadweep, Andaman-Nicobar, upper Assam, TN coast (200cm+ rainfall, short dry season). [Q34]

31. Dense Deciduous Forest — MP & West Champaran

- India mein **dense deciduous forest ka sabse bada area Madhya Pradesh** mein hai — district level par **West Champaran (Bihar)** sabse zyada **dense deciduous cover** rakhta hai (831.03 sq km) — Kaimur, Gaya, Nawada se zyada. *[Q35, Q36]*

| 32. Khair — Sub-Tropical Forest Tree

- Khair (Catechu) **Sub-tropical forests ka tree hai** — Shivalik aur Western Himalaya mein 1000m+ altitude par milta hai (Keekar, Acacia bhi is category mein). *[Q37]*

| 33. Highest Forest % State — Mizoram

- India State of Forest Report 2023 ke mutabik **Mizoram mein forest-area percentage sabse zyada** hai — Himachal Pradesh, Assam, Andhra Pradesh, Arunachal Pradesh se zyada. *[Q38]*

| 34. Sita Nadi Sanctuary — Sal Forest

- Sita Nadi Sanctuary (Chhattisgarh, 553.36 sq km) mein **Sal tree plurality mein milta hai** — Sal, Teak, Bamboo sab hain, par Sal forests country mein best mane jaate hain. *[Q39]*
