

□ PULSES — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

📄 Topics in this chapter:

1. Black Gram — Kharif+Rabi (South India), Moong Share Facts
2. India — World's Largest Pulses Producer/Consumer
3. Pulses NOT Exported from India
4. India — Largest Producer, Consumer & Importer of Pulses
5. Pulses Shortage — Demand Priority (Assertion-Reason)
6. Madhya Pradesh — Largest Pulses Producer
7. Legumes — Nitrogen-Fixing Crop Type
8. Cobalt — Essential Nutrient for Pulses
9. Crop-Variety Match Traps (Neelam is Mango, Not Arhar)
10. Rajma — Nitrogen Fixation Debate
11. NPK Ratio for Legume Crops
12. Red Gram (Arhar) — Origin in India
13. Arhar Varieties (Malaviya Chamatkar, Bahar, Amar, Azad)
14. Aparna — Leafless Pea Variety
15. Surya — Mango/Papaya/Potato Variety (Not Linseed)

1. Black Gram — Kharif+Rabi (South India), Moong Share Facts

- Black gram (Urad) North India mein sirf kharif crop hai, South India mein Rabi aur Kharif dono season mein ugti hai — 'Green-gram/Moong akela pulses production ka aadha hai' GALAT hai (sirf ~14% hai), 'kharif pulses badhe, rabi pulses ghathe' bhi GALAT hai (asal mein rabi pulses ~150% badhe hain). [Q1]

2. India — World's Largest Pulses Producer/Consumer

- India duniya ka sabse bada pulses producer/consumer hai — Myanmar, Canada baad mein aate hain. [Q2]

3. Pulses NOT Exported from India

- Wheat, Rice, Sugar kabhi-kabhi export hote hain — Pulses aam taur par export NAHI hoti (high consumption ki wajah se India ko import karna padta hai). [Q3]

4. India — Largest Producer, Consumer & Importer of Pulses

- India Pulses ka sabse bada producer, consumer AUR importer (2023) hai — Chickpeas, Lentils, Pigeon peas is category mein aate hain. [Q4]

5. Pulses Shortage — Demand Priority (Assertion-Reason)

- India mein pulses ki kami hai, par protein ki NAHI (Assertion sahi) — kyunki pulses ki demand-priority zyada hai, jabki India leading producer bhi hai (Reason sahi explanation hai). [Q5]

6. Madhya Pradesh — Largest Pulses Producer

- Madhya Pradesh India ka sabse bada pulses producer hai (2023-24, Economic Survey 2024-25). [Q6, Q17]

7. Legumes — Nitrogen-Fixing Crop Type

- Legumes (pulses) hawa se nitrogen fix karti hain (specialized bacteria ki madad se) — isliye inhe alag se nitrogen fertilizer ki utni zaroorat nahi hoti. [Q7]

8. Cobalt — Essential Nutrient for Pulses

- Pulses crop ke liye essential nutrient Cobalt hai — Rhizobium bacteria ke symbiotic nitrogen fixation ke liye zaroori hai, Vitamin B12 synthesis mein bhi. [Q8]

9. Crop-Variety Match Traps (Neelam is Mango, Not Arhar)

- 'Arhar-Neelam' GALAT pair hai — Neelam Mango ki variety hai, Arhar ki NAHI — Groundnut-Chandra, Lentil-Pant L-406, Mustard-Varuna sahi pairs hain. [Q9]

⚠ EXAM TRAP — Neelam — Mango ki variety hai, Arhar ki NAHI (common wrong-pair)

10. Rajma — Nitrogen Fixation Debate

- Gram, Pea, Moong sab nitrogen-fixation karte hain — Rajma ki nitrogen-fixation capacity kam/inefficient hai (research ke mutabik disputed question hai). [Q10]

11. NPK Ratio for Legume Crops

- Legume crops ke liye balanced fertilizer ratio (NPK) 1:2:2 (ya 0:1:1, 1:2:3) hota hai. [Q11]

12. Red Gram (Arhar) — Origin in India

- Red gram (Arhar) ka origin place India hai. [Q12]

13. Arhar Varieties (Malaviya Chamatkar, Bahar, Amar, Azad)

- Arhar ki varieties: Malaviya Chamatkar, Bahar, Amar, Azad, Malaviya Vikas, Paras — Barley-PVW 343, Gram-Aparna, Paddy-NW 1014 galat pairs hain (Arhar-Bahar hi sahi pair hai). [Q13, Q14, Q15]

14. Aparna — Leafless Pea Variety

- 'Aparna' pea (matar) ki high-yielding, leafless variety hai — Arkel, Azad Pea-1, L-116 se alag. [Q16]

15. Surya — Mango/Papaya/Potato Variety (Not Linseed)

- 'Surya' Mango, Papaya, Potato ki variety hai — Linseed (alsi) ki NAHI — 'Linseed-Surya' GALAT pair hai (Mustard-Varuna, Field Pea-Sapna, Groundnut-Kaushal sahi hain). [Q18]
