

NORTHERN MOUNTAINOUS REGION — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Himalaya Formation, Age & Ongoing Uplift (Assertion-Reason)
2. Three Parallel Ranges — Great, Middle/Lesser, Shiwalik
3. Bhabar & Tarai Belts
4. North-to-South Range Sequence (Trans-Himalaya)
5. Shiwalik Peaks Altitude — 900-1100m Average (Disputed)
6. Regional Divisions by River (Punjab/Kumaon/Nepal/Assam Himalaya)
7. Mountain Peaks & East-to-West Sequence
8. Patkai Range & North-East Hills
9. Pir Panjal, Atal Tunnel & Kashmir Valley
10. Aksai Chin, Karewa & Other Ladakh/Kashmir Features
11. State-wise Himalayan Spread & Oldest/Youngest Range Comparisons
12. Seismicity, Fossils & Other Facts
13. Imphal Basin, Mt. Kailash & Miscellaneous Peaks

1. Himalaya Formation, Age & Ongoing Uplift (Assertion-Reason)

- Himalaya se nikalne wali sabhi nadiyaan **perennial (barahmasi)** hoti hain kyunki unka source Himalayan glaciers mein hai — glaciers dry season mein bhi continuous paani dete hain. Lekin ye fact ki 'Himalaya ko zyada baarish south-west monsoon se milti hai' iska **sahi explanation NAHI** hai — dono statement sahi hain par ek dusre ko explain nahi karte. [Q1, Q3]
- Himalaya abhi bhi **~5mm/year (kuch sources 1cm+/year)** ki dar se badh raha hai — kyunki Indian tectonic plate Eurasian plate se collide kar rahi hai (~40-50 million saal pehle shuru hua tha), aur ye statement iska **sahi explanation hai**. [Q2]
- Agar Himalaya na hota to: **Siberia se cold waves poore desh mein aatin, Indo-Gangetic plain itni alluvial-rich na hoti, aur monsoon pattern bhi different hota** — teeno statements sahi hain. [Q5]

2. Three Parallel Ranges — Great, Middle/Lesser, Shiwalik

- Himalaya 3 parallel structural ranges mein bata hai (age ke hisaab se): **Great Himalaya (sabse purana, Oligocene 37-24 mn yrs) → Middle/Lesser Himalaya (Miocene 24-5 mn yrs) → Shiwalik (sabse naya, Pliocene 5-2 mn yrs, Cenozoic era)**. [Q4, Q9]
- Shiwalik (foothills/outermost range) ki width **10-50 km** aur altitude **900-1100m** ke beech hai — unconsolidated river-sediments se bani hai. Alag-alag areas mein alag naam se jaani jaati hai: Jammu mein 'Jammu Hills', Arunachal mein 'Dafla, Miri, Abor, Mishmi Hills'. [Q7, Q8, Q10, Q11, Q21]
- Middle/Lesser Himalaya ko '**Himachal**' bhi kaha jaata hai — width ~50km, elevation 3700-4500m. Shimla, Nainital, Mussoorie jaise zyaadatar hill stations isi range mein hain. Ye Shiwalik (south) aur Great Himalaya (north) ke beech mein padti hai. [Q19, Q20, Q35]

- Deep gorges, U-turn river courses, parallel mountain ranges, aur landslide-prone steep gradients — ye sab Himalaya ke **young fold mountain** hone ke evidence hain. [Q16]

3. Bhabar & Tarai Belts

- Sub-Himalayan flat plains ko **Bhabar** kehte hain — 8-16km wide narrow belt, Shiwalik foothills ke parallel, porous pebbly beds jisme streams poori tarah lupt ho jaati hain (piedmont situation ka example). Iske south mein **Tarai** belt hai (15-30km wide) jahan streams phir se emerge hoke marshy/swampy conditions banati hain. [Q6, Q14]

4. North-to-South Range Sequence (Trans-Himalaya)

- J&K map mein north se south order: **Karakoram → Ladakh → Zaskar → Pir Panjal**. North-to-south ek aur variant (Pir Panjal included as middle): **Karakoram → Ladakh → Zaskar → Shiwalik** (jab Pir Panjal exclude ho). [Q17, Q18]
- South-to-north sequence: **Dhauladhar (Middle Himalaya) → Zaskar → Ladakh → Karakoram (sab Trans-Himalaya)** — ya jab Pir Panjal include ho: **Pirpanjal → Zaskar → Ladakh → Karakoram**. [Q22, Q23]
- Western section mein south-to-north order: **Shiwalik → Lesser Himalaya → Great Himalaya**. [Q20]

5. Shiwalik Peaks Altitude — 900-1100m Average (Disputed)

- Shiwalik range (~2500 km lambi, Himalaya ki southern range) ki **average altitude 900-1100m hai** — regional variation ki wajah se koi single option perfectly accurate nahi hai, disputed question hai. [Q12]

6. Regional Divisions by River (Punjab/Kumaon/Nepal/Assam Himalaya)

- Himalaya ko rivers ke basis par bhi divide kiya jaata hai: **Indus-Satluj beech — Punjab Himalaya, Satluj-Kali beech — Kumaon Himalaya, Kali-Tista beech — Nepal Himalaya, Tista-Dihang beech — Assam Himalaya**. [Q13]

7. Mountain Peaks & East-to-West Sequence

- East-to-west sequence of peaks: **Kanchenjunga (Sikkim-Nepal border) → Everest (Nepal-China, world's tallest) → Annapurna → Dhaulagiri (dono Nepal mein)**. [Q24]
- Great Himalaya (Himadri) ki average height ~6000m hai, aur uski sabse ooncha peak Mt. Everest ~8850m (naya official figure 8848.86m, Nepal-China joint announcement se) — Himadri India ki **sabse youngest range** bhi hai (Aravalli sabse purani). [Q34, Q39]
- Namcha Barwa peak **Arunachal Himalaya** mein located hai. [Q15, Q44]
- Cho Oyu aur Lhotse Himalayan range ke peaks hain — Annamalai aur Sirumalai South India ki ranges hain, Himalaya mein NAHI (ye ek common confusion trap hai). [Q46]

8. Patkai Range & North-East Hills

- Patkai range Purvanchal (Eastern) Himalaya ka hissa hai, **tertiary era** mein bani — sab ranges mein sabse latest origin wali. Patkai hills ke saath lagne wale states: **Assam, Manipur, Meghalaya, Mizoram, Nagaland** — **Tripura NAHI** (Mizo hills Mizoram-Tripura mein failii hain, alag se). [Q25, Q26]

9. Pir Panjal, Atal Tunnel & Kashmir Valley

- Pir Panjal Range **Middle Himalaya** mein hai, Himachal Pradesh aur J&K mein southeast-northwest phaili hui. [Q27]
- Atal Tunnel (Rohtang, H.P.) — **9.02 km lambi**, Border Roads Organisation (BRO) ne banayi, **Eastern Pir Panjal Range** ke paar hai, Manali-Lahaul Spiti ko connect karti hai — Manali-Leh distance 46 km aur travel time 4-5 ghante kam karti hai, strategically important hai armed forces ke liye. [Q28, Q29, Q30]
- Kashmir Valley **Pir Panjal (southwest)** aur **Great Himalaya/Himadri (northeast)** ke beech mein bani hai — ek **synclinorium** mein formation hui thi. [Q31, Q32]

10. Aksai Chin, Karewa & Other Ladakh/Kashmir Features

- Aksai Chin (~38,000 sq km), **Ladakh Plateau** ka hissa hai — currently China ke occupation mein, par Indian territory maana jaata hai. [Q33]
- 'Karewa' landform — plateau-jaise terraces — **Kashmir Himalaya** mein milte hain (Jhelum aur uski tributaries ke upar), saffron cultivation ke liye jaane jaate hain. [Q43, Q44]
- Related facts: **Dehradun sabse bada Dun hai** (Nalagarh Dun NAHI — common wrong statement), aur **Valley of Flowers** Garhwal Himalaya (Uttarakhand) mein hai. [Q44]

11. State-wise Himalayan Spread & Oldest/Youngest Range Comparisons

- Himalaya **5 se zyada states/UTs** mein failaa hai (J&K, Ladakh, HP, Uttarakhand, Sikkim, Arunachal, Meghalaya, Nagaland, Manipur, Mizoram, Tripura, plus Assam/WB ke hill regions) — 'sirf 5 states' wala statement galat hai. Western Ghats bhi **6 states** (Gujarat, Maharashtra, Goa, Karnataka, Tamil Nadu, Kerala) mein failaa hai, 5 nahi. Pulicat Lake sirf **2 states (Tamil Nadu aur Andhra Pradesh)** mein hai — ye statement sahi hai. [Q36]
- Himalayan mountain ranges **Uttar Pradesh ka hissa NAHI** hain (U.P. sirf plains mein hai) — jabki Uttarakhand, Sikkim, Himachal Pradesh sab Himalayan states hain. [Q37]
- Comparison: Himalaya **sabse young** folded mountain hai India mein — Aravalli **sabse purani (oldest)** hai. [Q38, Q39]

12. Seismicity, Fossils & Other Facts

- India mein **seismic zones ka sabse zyada concentration Himalayan region** mein hai (zyadatar zone IV-V mein), kyunki yahan kai **longitudinal thrust zones** (Main Frontal Thrust, Main Boundary Fault, Main Central Thrust) hain — ye Assertion-Reason dono sahi hain aur Reason, Assertion ka sahi explanation deta hai. [Q40]
- Fossil facts: **Lesser Himalaya ki sedimentary rocks mein marine living fossils** milte hain; **Shiwalik (outer) Himalaya mein human civilization ke remains** milte hain. Lekin 'Great Himalaya ki rocks fossilless

thin' — ye statement **GALAT** hai, kyunki Great Himalaya ki sedimentary rocks mein bhi fossils hote hain. *[Q42]*

13. Imphal Basin, Mt. Kailash & Miscellaneous Peaks

- 'Imphal Basin' (Manipur hills se ghira) **lacustrine plain** ka fine example hai (jaise Kashmir Valley bhi) — purane zamane mein yahan lake tha, jiske sediment-deposition se ye plain bani. *[Q41]*
- Mount Kailash **Tibet (China)** region mein hai — Hinduism ka pavitra tirtha sthal maana jaata hai. *[Q45]*
