

INDIAN COASTLINE — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Plate Tectonics Theory — Origin
2. Mean Sea Level — Chennai Reference Point
3. Territorial Waters Limit
4. Total Coastline Length of India
5. Longest Coastline State — Gujarat
6. Number of Coastal States
7. 'Ratnakara' — Ancient Name for Indian Ocean
8. Coastal Erosion — Main Cause

| 1. Plate Tectonics Theory — Origin

- Plate Tectonics theory 1960s mein develop hui — **H.H. Hess (aur Wilson, Morgan, Parker, McKenzie)** jaise scientists ka contribution tha. Ye theory **Seafloor Spreading theory** par based hai — statement 'H.H. Hess ne 1967 mein akele diya' galat hai (multiple contributors the), lekin 'seafloor spreading pe based hai' wala part sahi hai. [Q1]

| 2. Mean Sea Level — Chennai Reference Point

- India ka **mean sea level Chennai coast** se measure kiya जाता है — Mumbai, Kochi, Visakhapatnam se NAHI (common confusion trap). [Q2]

| 3. Territorial Waters Limit

- India ki territorial waters ki limit coast se **12 nautical miles** tak hai — iss area par state ka territorial jurisdiction hota hai. [Q3]

| 4. Total Coastline Length of India

- India ki total coastline lambaai **7516.6 km (purana figure)** — **naya updated figure 11098.81 km** hai. India teen taraf se ghira hai: **East mein Bay of Bengal, South mein Indian Ocean, West mein Arabian Sea**. Ek alag disputed question mein 6200/6100/5985/6175 km jaise options diye jaate hain — ye sab galat/outdated figures hain, is baare mein exact confusion exists hai. [Q4, Q5]

| 5. Longest Coastline State — Gujarat

- India ka **sabse lambi coastline wala state Gujarat** hai — Maharashtra, Andhra Pradesh, Tamil Nadu, Kerala se zyada. Ye fact multiple baar (alag phrasing mein) puchha जाता है, isliye pakka yaad rakho. [Q6, Q7, Q8]

| 6. Number of Coastal States

- India mein **9 states** coastline share karte hain (Gujarat, Maharashtra, Goa, Karnataka, Kerala, Tamil Nadu, Andhra Pradesh, Odisha, West Bengal) — **7, 8, ya 10 NAHI**. [Q9]

7. 'Ratnakara' — Ancient Name for Indian Ocean

- Ancient Indian historical geography mein '**Ratnakara**' term **Indian Ocean** ko denote karta tha — matlab 'jahan ratna/jewels milte hain'. Arabian Sea ya Bay of Bengal ke liye NAHI use hota tha. *[Q10]*

8. Coastal Erosion — Main Cause

- Coastal erosion mein waves, tides, currents, tsunami, human activities sab ka role hota hai — lekin **maximum coastal erosion 'Waves (lehren)' se hota hai**. *[Q11]*
