

❑ SNOW LINES AND GLACIERS — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Snow-Line — Definition & Height in Himalayas
2. Siachen — India's Largest Glacier
3. Glacier Length Comparisons
4. Chaurabari Glacier & Kedarnath
5. Himalayan Glacier Melting Rate
6. Milam Glacier — Kumaun Region
7. Glacier–River Origin Pairs
8. Glaciers in Decreasing Order of Length

| 1. Snow-Line — Definition & Height in Himalayas

- Snow-line = wo altitude jiske upar saal bhar ground par kuch snow bani rehti hai. Himalaya mein average height **Northern part mein 5500-6000m, Southern part mein 4500-6000m** — overall range **4300m se 6000m** ke beech maani jaati hai. *[Q1]*
- Uttar Pradesh mein snow-line ka average height wala question **disputed/deleted hai** — kyunki Uttarakhand ke separate hone ke baad U.P. mein snowfall hoti hi nahi, isliye koi bhi option sahi nahi hai. *[Q2]*

| 2. Siachen — India's Largest Glacier

- Siachen **India ka sabse bada glacier** hai — Eastern Karakoram range mein, **Nubra Valley ke North** mein located. Ye duniya ka **sabse ooncha battlefield** bhi hai, jo Central Asia ko Indian subcontinent se demarcate karta hai aur Pakistan-China ko separate karta hai. Length **~72km (textbooks)** ya **76.64km (World Glacier Inventory)**, area **~1056.42 sq km**. *[Q3, Q4, Q6]*

| 3. Glacier Length Comparisons

- Options-based comparison (jab Siachen options mein na ho): **Gangotri (30.0km) > Rundun (19km) > Kanchenjunga (16km) > Kedarnath (14.5km)** — is set mein Gangotri sabse lamba hota hai. *[Q5]*

| 4. Chaurabari Glacier & Kedarnath

- Chaurabari Glacier (Garhwal Himalaya, Uttarakhand) **Kedarnath Temple ke North** mein hai — iske pighalne se bani lake ka naam **Gandhi Sarovar** hai. Mandakini river isi glacier se nikalti hai. *[Q7, Q10]*

| 5. Himalayan Glacier Melting Rate

- Himalayan glaciers duniya mein **sabse tezi se pighal rahe hain (highest melting rate)** — Gangotri Glacier (jahan se Ganga nikalti hai) pichhle 50 saalon mein apne size ka aadha reh gaya hai. *[Q8]*

| 6. Milam Glacier — Kumaun Region

- Milam Glacier Uttarakhand ke **Kumaun region** ka major glacier hai — **Gori Ganga (Kali River)** isi glacier se nikalti hai. *[Q9]*

7. Glacier–River Origin Pairs

- Sahi glacier-river pairs: **Bandarpunch** → **Yamuna**, **Bara Shigri** → **Chenab**, **Siachen** → **Nubra**. **Milam** → **Mandakini GALAT hai** (Mandakini asal mein Chorabari glacier se nikalti hai); **Zemu** → **Manas GALAT hai** (Zemu, Kanchenjunga ke base par Eastern Himalaya ka sabse bada glacier hai, ~26km lamba, lekin Manas se related nahi). *[Q10]*

⚠ EXAM TRAP — **Milam-Mandakini aur Zemu-Manas dono galat pairs hain** — mostly asked in reverse trap format

8. Glaciers in Decreasing Order of Length

- Length ke hisaab se decreasing order: **Hispar** > **Biafo** > **Drang Drung** > **Sonapani** > **Bara Shigri**. *[Q11]*
