

PLATEAUS — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Deccan Trap — Formation Period
2. Meghalaya Plateau — Peninsular Plateau ka Extension
3. Extra-Peninsular Mountains — Cenozoic Era
4. Chota Nagpur Plateau — Dhanbad & Structure
5. Map-Based Region Identification (Rift Valley, Rain Shadow)
6. Malwa Plateau — Location Between Aravalli-Vindhya
7. Vindhyan Scarpland — Bhandar Plateau
8. Dandakaranya Region
9. Bihar's Geological Age Comparison
10. Meghalaya Plateau — Constituent Hills
11. Albama Hill — Bijapur Upland
12. Peninsular Plateau — Extent, Height & Boundaries

| 1. Deccan Trap — Formation Period

- Deccan Plateau ki Basaltic Lava rocks **Cretaceous period** mein bani (~66.25 million years pehle) — large-scale volcanic activity se. Peninsular India ki rocks ki origin ~3600 million years purani hai; Carboniferous period mein **Damodar, Son, Mahanadi aur Godavari basins mein coal** bana. [Q1]

| 2. Meghalaya Plateau — Peninsular Plateau ka Extension

- Meghalaya plateau **Peninsular Plateau ka extension** hai — **Malda Gap** se separate hua hai. Peninsular plateau shape mein triangular hai, U.P.-Bihar ke plains se south tak poore peninsula ko cover karta hai. [Q2]

| 3. Extra-Peninsular Mountains — Cenozoic Era

- India ke Extra-peninsular mountains (jaise Himalaya) **Cenozoic Era** mein bane the. [Q3]

| 4. Chota Nagpur Plateau — Dhanbad & Structure

- Dhanbad, Chota Nagpur plateau ka **sabse dense-population wala district** hai — kyunki yahan **mining industries ka development aur industrialization** hua hai (sirf coal/iron-ore ki availability se density nahi badhi, actual reason hai mining-driven industrialization). Red soil hone ki wajah se agriculture yahan zyada useful nahi. [Q4]
- Chota Nagpur Plateau (Jharkhand + Odisha, WB, Bihar, Chhattisgarh ke adjacent parts, ~86239 sq km) ek **'front sloping' plateau** hai — steep scarps ke saath sharp slope-break. Central-western part mein 'Patland' ~1100m height tak extend hota hai. [Q5]

| 5. Map-Based Region Identification (Rift Valley, Rain Shadow)

- Map-labeling type question ka pattern: **Rift Valley region (Narmada-Tapti) → Chhattisgarh plain (Mahanadi se drain) → Chota Nagpur plateau → Rain shadow region (Western Ghats ka hissa)** — is order mein A-B-C-D label kiye jaate hain. [Q6]

6. Malwa Plateau — Location Between Aravalli-Vindhya

- Malwa Plateau (~150000 sq km, length 530km, width 390km) **Aravalli aur Vindhya ranges ke beech** hai — northern end Aravalli se, southern end Vindhya range se, aur eastern border Bundelkhand plateau se determine hoti hai. [Q7]

7. Vindhyan Scarpland — Bhandar Plateau

- Vindhyan Scarpland ka southern part '**Bhandar Plateau**' kehlata hai — steep aur rugged terrain ke liye jaana jaata hai, Vindhya mountains ka hissa maana jaata hai. [Q8]

8. Dandakaranya Region

- Dandakaranya region (~89078 sq km) **Odisha, Chhattisgarh, Telangana, Maharashtra aur Andhra Pradesh** mein failaa hai (isliye 'sirf ek state' wala option galat hoga — multiple states involved hain), **Central India** mein located — east-west ~480km, north-south ~320km extent. [Q9, Q10, Q11]

9. Bihar's Geological Age Comparison

- Bihar ke areas ka geological order (oldest se newest): **Kharagpur Hills (Dharwad order, sabse purana) → Rohtas Plateau (Vindhyan order) → North-Western Hills (Tertiary order) → North Ganga Plains (sabse naya)**. [Q12]

10. Meghalaya Plateau — Constituent Hills

- Meghalaya Plateau ka hissa: **Garo, Khasi aur Jaintia Hills**. **Bhuban Hills** Meghalaya plateau ka hissa **NAHI** hai — wo Assam ki Barak Valley mein hai. [Q13]

11. Albama Hill — Bijapur Upland

- Albama Hill, Bijapur upland ke **South** mein located hai. [Q14]

12. Peninsular Plateau — Extent, Height & Boundaries

- Peninsular plateau river plains se **150m se 600-900m** ki elevation tak uthta hai — ek irregular triangle. Iski outer boundaries: **Delhi Ridge (NW, Aravalli ka extension), Rajmahal Hills (East), Gir Range (West), Cardamom Hills (South)** — northeast mein Shillong/Karbi-Anglong plateau ke roop mein bhi extension hai. [Q15]
- Ye India ke **sabse purane aur stable landmasses** mein se ek hai — multiple 'patland' plateaus se bana (Hazaribagh, Palamu, Ranchi, Malwa, Coimbatore, Karnataka plateau, etc). **Overall height West se East ki taraf GHATTI hai (badhti nahi)** — river-flow pattern isi se prove hota hai. [Q15, Q16]

⚠ EXAM TRAP — Peninsular plateau height 1000-1500m NAHI (asal mein 150-900m); Gir range East mein nahi West mein hai
