

□ ROCK SYSTEM — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

📖 Topics in this chapter:

1. Dharwar System — Most Mineralized Rock System
2. Chotanagpur Plateau — 'Ruhr Region of India'
3. Vindhyan Rocks — Limestone-Rich (Sedimentary)
4. Iron Ore Production — Odisha Leads (2023-24)
5. Largest Mineral Reserves — South-East to North-East Belt
6. State-wise Mineral Production Ranking (Odisha > Chhattisgarh)
7. Odisha — 'State of Minerals'
8. Gondwana System — 95%+ Coal Source (Assertion-Reason)
9. Non-Metallic vs Metallic Minerals (Marble Example)

1. Dharwar System — Most Mineralized Rock System

- Dharwar System India ka **sabse zyada mineralized rock system hai** — **metallic minerals (iron-ore, manganese, copper, lead, gold) ka main source hai** — Karnataka ke Dharwar region mein pehli baar study hui thi. [Q1, Q2]

2. Chotanagpur Plateau — 'Ruhr Region of India'

- Chotanagpur Plateau ko '**Indian minerals ka bhandaar**' aur '**Ruhr region of India**' kaha jaata hai — minerals ki richness ki wajah se. [Q3]

3. Vindhyan Rocks — Limestone-Rich (Sedimentary)

- Vindhya range ki rocks **sedimentary hain (water-suspended particles ke sedimentation se bani)** — **Limestone, sand, china clay** prominent minerals hain — limestone cement industry ka base hai. [Q4]

4. Iron Ore Production — Odisha Leads (2023-24)

- 2023-24 mein Iron Ore production ~**252.2 million tonnes** tha — **Odisha 55% ke saath sabse bada producer**, Karnataka (16%), Chhattisgarh (15%) dusre-teesre number par. [Q5]

5. Largest Mineral Reserves — South-East to North-East Belt

- India ke **sabse bade mineral reserves South-East se North-East belt mein hain** — **Chota Nagpur, Dandakaranya aur Odisha plateau** is region mein hain, iss peninsular region ko 'Indian minerals ka hriday' kaha jaata hai (coal, iron, mica, copper, bauxite pradhan hain). [Q6]

6. State-wise Mineral Production Ranking (Odisha > Chhattisgarh)

- 2023-24 mineral production value ranking: **Odisha (46%) > Chhattisgarh (14%) > Rajasthan (13%) > Karnataka (12%) > Jharkhand (4.7%) > Maharashtra (4.6%)** — 8 states ne total production ka 97.5% cover kiya. Jab question pucha gaya tha tab **Bihar (undivided, Jharkhand samet) sabse rich tha**. [Q7, Q8]

7. Odisha — 'State of Minerals'

- Odisha ko '**State of Minerals**' kaha jaata hai — coal, iron ore, bauxite, chromite mein rich hai, India ke total mineral production ka significant share deta hai. [Q9]

8. Gondwana System — 95%+ Coal Source (Assertion-Reason)

- Gondwana System India ka ~99.54% coal deta hai (Assertion sahi) — Dharwar System ferrous/non-ferrous minerals ke saath associated hai (Reason bhi sahi hai) — lekin R, A ki sahi explanation NAHI hai (dono independent facts hain). Coal-bearing areas: Raniganj, Jharia, Karanpur, Bokaro (Damodar Basin) aur Pench Valley (Chhattisgarh-MP). [Q10]

9. Non-Metallic vs Metallic Minerals (Marble Example)

- Non-metallic mineral: **Marble** — **Manganese, Silver, Lead metallic minerals hain**. India total **95 minerals** produce karta hai (4 fuel, 10 metallic, 23 non-metallic, 3 atomic, 55 minor). [Q11]
