

BRAHMAPUTRA DRAINAGE SYSTEM — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. The 'U' Turn — Syntaxial Bending
2. Names in Different Regions (Yarlung Zangbo, Tsangpo, Dihang)
3. Mansarovar Lake — Common Source of 3 Rivers
4. Rivers Through Arunachal Pradesh (Lohit, Subansiri, Barak)
5. Major Tributaries (Manas, Dibang, Kameng)
6. Catchment Area & Countries
7. Majuli — World's Largest Riverine Island
8. Teesta River — Origin, Rangeet & River Capture
9. Tibetan Plateau — Common Origin Point (Brahmaputra & Indus)

| 1. The 'U' Turn — Syntaxial Bending

- Brahmaputra (Irrawaddy aur Mekong ke saath) Tibet ki ek sankri jagah se nikalti hai, aur India mein aane ke liye ek 'U' turn leti hai. Ye turn **geologically young Himalaya ke syntaxial bending** ki wajah se hota hai — Arunachal Pradesh ki eastern limit par ek hairpin-jaisa mod hai jahan mountains east se south trend mein sharply mudte hain. [Q1]

| 2. Names in Different Regions (Yarlung Zangbo, Tsangpo, Dihang)

- Brahmaputra alag-alag regions mein alag naam se jaana jaata hai: **Tibet mein Yarlung Zangbo / Tsangpo (ya Sanpu), Arunachal Pradesh mein Dihang, Assam mein Brahmaputra, Bangladesh mein Jamuna.** [Q2, Q6]

| 3. Mansarovar Lake — Common Source of 3 Rivers

- Tibet ki Mansarovar Lake ke paas **Brahmaputra, Satluj aur Indus** — teeno rivers ka source hai. [Q3]

| 4. Rivers Through Arunachal Pradesh (Lohit, Subansiri, Barak)

- Arunachal Pradesh se guzarne wali rivers: **Lohit aur Subansiri** (dono Brahmaputra ki tributaries) — **Barak river Arunachal se NAHI guzarti** (Manipur Hills se nikalti hai, Manipur-Nagaland-Assam border se guzarti hai). [Q4]

| 5. Major Tributaries (Manas, Dibang, Kameng)

- Brahmaputra ki major tributaries: **Manas, Tista, Kameng, Subansiri, Dhansari, Burhi Dihing, Dibang, Kopili, Sankosh, Jiabharali, Lohit** — sab teeno (Dibang, Kameng, Lohit) sahi tributaries hain (koi trap nahi is set mein). [Q5, Q10]

| 6. Catchment Area & Countries

- Brahmaputra ka catchment area **Tibet (China), Bangladesh, India, aur Bhutan** mein failaa hai. [Q7]

7. Majuli — World's Largest Riverine Island

- Majuli, duniya ka **sabse bada inhabited riverine island**, **Brahmaputra river** dwara banaya gaya hai. [Q8]
- Note: Is chapter mein ek off-topic mineral-related question (Karnataka manganese-producing areas) bhi shaamil tha, jo drainage-system se related nahi tha — isliye is mindmap mein exclude kiya gaya. [Q9]

8. Teesta River — Origin, Rangeet & River Capture

- Teesta river **Khangchung Chho glacial lake (Sikkim)** se 'Chhonbo Chhu' naam se nikalti hai (~5280m altitude) — **Brahmaputra ke saath same source NAHI hai** (Brahmaputra ka source Angsi Glacier, Tibet hai). **Rangeet river Sikkim se nikalti hai aur Teesta ki tributary hai (ye statement SAHI hai)**. Teesta Sikkim-West Bengal se hoke Bangladesh mein Brahmaputra se milti hai, phir Bay of Bengal mein girti hai — **seedhe India-Bangladesh border par Bay of Bengal mein NAHI girti**. [Q11]

EXAM TRAP — Teesta ka source Brahmaputra jaisa nahi hai — dono alag glaciers se nikalti hain

- Historically Teesta river **Ganga ki tributary thi**, ab **Brahmaputra ki tributary hai** — ye 'river capturing' (**nadi apaharan**) ki wajah se hua, jo Himalayan rivers ki ek major feature hai (river capturing valley development ke youthful stage mein zyada active hota hai, lekin mature/senile stages mein bhi ho sakta hai). [Q13]

9. Tibetan Plateau — Common Origin Point (Brahmaputra & Indus)

- Tibetan Plateau ('Roof of the World', average elevation 4500m+) se nikalne wali rivers: **Yangtze, Huang He, Mekong, Indus, Satluj, Brahmaputra, Salween** — isliye **Brahmaputra aur Indus ka almost same starting point** hai (Tapi-Beas ya Ganga-Brahmaputra ka NAHI). [Q12]
