

LATERITE SOIL — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Origin — High Temperature & Heavy Rainfall (Leaching)
2. Word Origin — Latin 'Later' (Brick)
3. Colour & Composition — Iron/Aluminium Rich
4. Nutrient Deficiency — Nitrogen, Lime, Humus, Phosphorus
5. Crops — Tapioca & Cashew Nuts
6. Andhra Pradesh — Wrong Association Trap
7. Geographic Spread — Malabar Coast Leading
8. Building Material Use
9. Infertility Due to Excess Iron

| 1. Origin — High Temperature & Heavy Rainfall (Leaching)

- Laterite soil **high temperature aur heavy rainfall wale areas (typical monsoon conditions, wet-dry periods)** mein develop hoti hai — **leaching process se bases aur silica surface se bah jaate hain**, iron-aluminium oxides peeche reh jaate hain. [Q1, Q2, Q3, Q6]

| 2. Word Origin — Latin 'Later' (Brick)

- 'Laterite' word **Latin word 'Later' (matlab 'brick')** se aaya hai. [Q3]

| 3. Colour & Composition — Iron/Aluminium Rich

- Laterite soil **red se reddish-yellow color** ki hoti hai — **Iron aur Aluminium oxides se rich hai (Iron-Aluminium se poor NAHI)**, porous aur well-drained hai lekin water-holding capacity kam hai. [Q4]

| 4. Nutrient Deficiency — Nitrogen, Lime, Humus, Phosphorus

- Laterite soil mein **Nitrogen, Phosphorus, Potash, Magnesium, Lime, Humus ki kami** hoti hai — acidic character dikhati hai, isliye **fertility kam hoti hai (crop production ke liye kam useful)**. [Q8]

| 5. Crops — Tapioca & Cashew Nuts

- Laterite soil par **Tapioca aur Cashew nuts achhi tarah ugte hain** — statement 'red colour + Tapioca/cashew' sahi hai, 'nitrogen-potash rich' aur 'Rajasthan-UP mein well-developed' **GALAT** hai. [Q1]

| 6. Andhra Pradesh — Wrong Association Trap

- West Bengal ka net sown area (~60%) Andhra Pradesh (~40%) se zyada hai (Assertion sahi) — lekin **iska reason 'AP mein laterite soil hai' GALAT hai** (AP mein **mostly Red aur Alluvial soils** hain, laterite nahi). [Q5]

|  **EXAM TRAP — Andhra Pradesh mein Red/Alluvial soil hai — laterite soil ka association GALAT hai**

| 7. Geographic Spread — Malabar Coast Leading

- Laterite soil **2.48 lakh sq km** area cover karti hai — **Western Ghats, Eastern Ghats, South Maharashtra, Karnataka, AP, Odisha, WB, Kerala, Jharkhand, Assam, Meghalaya** mein failii hai. **Sabse zyada Kerala (Malabar Coastal Region)** mein hai — options mein Kerala na ho to Maharashtra sahi answer hai. *[Q6, Q7]*

| 8. Building Material Use

- Laterite soil ke sahi facts: **humid tropical regions ki soil hai, highly leached hai, fertility kam hai, good building material deti hai** — 'lime se rich hai' **GALAT** hai (lime ki kami hoti hai). *[Q8]*

| 9. Infertility Due to Excess Iron

- Laterite soil **excess iron ki presence ki wajah se infertile ho jaati hai** — Desert sand, Alluvial, Podzolic soils mein ye characteristic **NAHI** hai. *[Q9]*
