

The Mercury — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Chapter 01_iv_The_Mercury

Topic Index

1. Mercury — Orbit aur Speed
2. Mercury — Satellites aur Albedo

Mercury — Orbit aur Speed

- Elliptical orbit mein planet Sun ke sabse nearest point pe hota hai, wahan uski **kinetic energy sabse zyada** hoti hai (gravity strongest, speed fastest). *[Q1]*
- **Mercury** sabse kam time (88 days) mein Sun ki 1 revolution complete karta hai — sabse fast. *[Q2]*

Mercury — Satellites aur Albedo

- **Mercury aur Venus** — ye 2 planets hain jinke koi natural satellite/moon nahi hai. *[Q3]*
- Albedo = reflective properties measure karta hai. Mercury ka albedo Earth se **kam** hai (~0.1 vs Earth ~0.3), zyada nahi — sirf Statement 1 (albedo defines brightness) correct hai. *[Q4]*

EXAM TRAP

- Mercury ko zyada sunlight milta hai lekin uska albedo Earth se KAM hai — 'zyada sunlight = zyada albedo' assume mat karo. *[Q4]*
