Chapter 01_v_The_Venus

Topic Index

1. Venus — Hottest Planet aur Names
2. Venus — Life aur Atmosphere
3. Venus — Space Missions

Venus — Hottest Planet aur Names

- **Venus** Solar System ka sabse hot planet hai ($\sim 464^\circ\text{C}$), Mercury nahi — kyunki Venus ke atmosphere mein CO_2 bahut zyada hai (dense greenhouse effect). [Q1]
- Venus ko **Evening Star** aur **Morning Star** dono kehte hain — sabse bright planet hai. [Q2, Q3]
- Venus ko Earth ki '**Twin Sister**' bhi kehte hain — size, mass aur composition Earth ke similar hai. [Q3, Q5]

EXAM TRAP

- Hottest planet = **Venus** (Mercury nahi), kyunki distance se zyada CO_2 concentration matter karta hai. [Q1]

Venus — Life aur Atmosphere

- Venus pe human life **highly improbable** hai — atmosphere mein $\sim 96.5\%$ CO_2 hai aur surface temperature $400^\circ\text{C}+$ hai. [Q4]

Venus — Space Missions

- **Magellan** spacecraft Venus ki surface map karne bheja gaya tha (launched 4 May 1989, orbit entered 10 Aug 1990). [Q6]
