

The Comets and Meteors — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Chapter 01_xiii_The_Comets_and_Meteors

Topic Index

1. Comet ki Tail
2. Famous Comets
3. Meteors

Comet ki Tail

- Comet ki tail hamesha Sun se opposite direction mein hoti hai kyunki **solar radiation pressure** coma (comet ke around vaporized gas/dust) pe radial pressure daalta hai. [Q1]

EXAM TRAP

- Tail centrifugal force ki wajah se NAHI banti — **solar radiation pressure** hi asli reason hai. [Q1]

Famous Comets

- **Hale-Bopp** — long-period comet, 1995 mein discover hua (Alan Hale + Thomas Bopp, independently). [Q2]
- **Shoemaker-Levy 9** comet **Jupiter** se collide hua tha (16-22 July 1994) — pehli directly-observed collision between 2 Solar System bodies. [Q3]

Meteors

- **Meteor** = outer space se Earth ke atmosphere mein enter hone wala matter ka piece ('shooting star'/'falling star') — atmospheric friction se glow karta hai, zyadatar surface tak pahunchne se pehle burn ho jaate hain. [Q4]
