

The Volcano — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Chapter 04_The_Volcano

Topic Index

1. Volcanic Products aur Landforms
2. Magma, Lava, Plutonic vs Volcanic Rocks
3. Volcanic Belts
4. Famous Volcanoes — Height, Location, Status
5. Kilimanjaro
6. Mediterranean/Italy Volcanoes
7. Arctic aur Antarctica
8. Most Active Volcano
9. Volcano-Country Matching (multiple sets)
10. Indonesia — Islands aur Volcanoes

Volcanic Products aur Landforms

- Volcanic eruption products: Pyroclastic debris, Ash-dust, Nitrogen compounds, Sulphur compounds — **saare 4** products hain. [Q1]
- **Volcanic cone** = constructive/basic landform hai (lava deposition se banta hai) — Residual mountain, Monadnock, Erosional waterfall sab erosional/destructive landforms hain. [Q2]
- Volcanoes se sabse abundant gas **Water Vapour (H₂O)** nikalti hai (CO₂, SO₂ bhi important hain, lekin H₂O sabse zyada). [Q3]

Magma, Lava, Plutonic vs Volcanic Rocks

- Earth ke andar ka molten material = **Magma**; jab yeh surface pe erupt hota hai toh **Lava** kehata hai. [Q6]
- Magma jab Earth ke deep andar cool-solidify hota hai → **Plutonic rock** banti hai (large crystals, slow cooling). [Q7]

Volcanic Belts

- Volcanic eruptions sabse zyada **Circum-Pacific Belt** (Pacific 'Ring of Fire') mein hote hain — world ke ~3/4 active volcanoes yahan hain. [Q5]
- **Baltic Sea** mein volcanic eruptions NAHI hote (active plate boundary se associated nahi hai) — Black Sea, Caribbean Sea, Caspian Sea se contrast. [Q8]

Famous Volcanoes — Height, Location, Status

- Given options mein sabse high volcanic mountain: **Mount Cotopaxi (Ecuador, ~5,897m)** — Kilimanjaro (~5,895m) se marginally higher. [Q4]

- **Mt. Etna** = active volcano (Sicily, Italy). [Q9]
- **Mount St. Helens** = USA (Washington state) mein, 'Fujiyama of America' bhi kehte hain. [Q10]
- **Mauna Loa** = Hawaii mein, world ka largest active volcano (volume/area se) — 2022 mein 38 years baad erupt hua (pehla eruption 1984 mein tha). [Q11, Q12, Q13]
- Active volcanoes (given lists mein): **Cotopaxi, Etna, Fujiyama** — Aconcagua active NAHI hai. [Q14]
- Active volcanoes: **Etna aur Vesuvius** — Kilimanjaro dormant hai, Aconcagua active nahi. [Q15]

⚠ EXAM TRAP

- **Aconcagua** (Argentina) sabse tall peak hai lekin ACTIVE VOLCANO NAHI hai — isse baar baar list mein distractor ki tarah use kiya jaata hai. [Q14, Q15]

Kilimanjaro

- **Kilimanjaro** = Africa ka highest peak, **Tanzania** mein located, **volcanic mountain** hai (3 cones: Kibo, Mawenzi, Shira — Uhuru Peak Kibo pe hai). [Q16, Q17]

Mediterranean/Italy Volcanoes

- **Stromboli** = 'Lighthouse of the Mediterranean Sea' kehata hai (frequent glowing eruptions ki wajah se), **active volcano** hai (Aeolian Islands, Italy) — 'Strombolian eruption' term isi se aaya hai. [Q18, Q20]

Arctic aur Antarctica

- Arctic region aur Antarctica continent respectively **North Pole aur South Pole** ke around located hain. [Q19]

Most Active Volcano

- Given options mein world ka sabse active volcano: **Kilauea (Hawaii, USA)** — Etna, Piton de la Fournaise, Nyamuragira bhi highly active hain. [Q21]

Volcano-Country Matching (multiple sets)

- Etna–Sicily, Vesuvius–Italy, Erebus–Ross Island, Cotopaxi–Ecuador. [Q22]
- Mount Rainier–USA, Etna–Italy, Paricutin–Mexico, Taal–Philippines. [Q23, Q28]
- Mount Kinabalu–Malaysia, Elburz–Iran, Aconcagua–Argentina, Kilimanjaro–Tanzania. [Q24]
- Sabancaya–Peru, Mount Etna–Italy, Colima–Mexico, Merapi–Indonesia. [Q25]

Indonesia — Islands aur Volcanoes

- Indonesia mein **15,000+ islands** hain — statement correct; lekin 'active volcanoes 150+' claim **galat** hai (official count 127 active volcanoes hai). [Q26]
- **Krakatoa (Krakatau)** volcanic mountain **Indonesia** mein hai (Sunda Strait, Java-Sumatra ke beech). [Q27]

EXAM TRAP

- Indonesia mein islands 15,000+ hain lekin active volcanoes **150 se KAM** (127) hain — numbers ko exactly yaad rakho, round-off mat karo. *[Q26]*
