

The Ocean Currents — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Chapter 22_The_Ocean_Currents

Topic Index

1. Ocean Currents ko Influence Karne Wale Factors
2. Indian Ocean Currents — Monsoon Effect
3. Agulhas Current
4. North Atlantic Drift
5. South Atlantic — Cold Current
6. Indian Ocean Currents — Odd One Out
7. Cold vs Warm Currents Identification
8. South Atlantic Current Circle (Gyre)
9. North Atlantic Ocean Currents
10. Peruvian/Humboldt Current — Odd One Out
11. Salinity, Tides, Currents — Mixed True/False
12. Cold vs Warm Current Identification (More Sets)
13. Gulf Stream
14. Benguela aur Guinea Currents
15. Currents — Ocean aur Nature Matching
16. Equatorial Counter-Current
17. Pacific Ocean Currents
18. Atlantic Ocean Current
19. Warm Current Identification

Ocean Currents ko Influence Karne Wale Factors

- Ocean currents ko influence karte hain: **Earth's rotation, Air pressure/wind, Ocean water density — Earth's revolution NAHI** karta. [Q1]
- Ocean currents ke baare mein saare 4 statements TRUE hain: (1) slow surface water movement, (2) heat balance maintain karte hain, (3) mainly prevailing winds se set hote hain, (4) ocean configuration se affected hote hain. [Q2]

Indian Ocean Currents — Monsoon Effect

- Indian Ocean mein currents ki regular direction change hone ka reason: **Monsoon drift** — NE aur SW monsoon winds ki wajah se Northern Indian Ocean mein current direction saal mein 2 baar change hoti hai; Southern Indian Ocean mein pattern zyada fixed hota hai. [Q3]

Agulhas Current

- **Agulhas Current** = South **Indian Ocean** ki warm current — South Equatorial Current southward mudkar Madagascar+Mozambique currents banati hai, phir Madagascar ke south mein combine hoke Agulhas Current banti hai (SE Africa coast ke saath flow karti hai). [Q4,Q5]
- **Agulhas warm current** hai — Canary, Humboldt, Oyashio sab cold currents hain (Agulhas inme se odd-one-out hai). [Q6]

North Atlantic Drift

- North Atlantic Current/Drift se sabse zyada benefit **Norway** ko hota hai (sub-polar region mein, warm current winter ice spread rokta hai) — isliye 'Blanket of Europe' bhi kehte hain. [Q7]

South Atlantic — Cold Current

- **Benguela Current** = South Atlantic Ocean ki cold current (Southern Africa ke west coast ke saath north ki taraf flow karti hai, phir South Equatorial Current mein merge) — Canary (North Atlantic cold), Agulhas (S. Indian warm), Brazil (E. Brazil warm) se contrast. [Q8]

Indian Ocean Currents — Odd One Out

- Agulhas, Mozambique, South Indian Ocean Current — sab Indian Ocean se belong karte hain; **Benguela Current Indian Ocean ki NAHI** hai (South Atlantic ki cold current hai, Africa ke west coast pe). [Q9]

Cold vs Warm Currents Identification

- Given options mein cold NAHI (matlab warm) hain: **Agulhas AUR Brazil Current** — Humboldt/Peru aur California Currents cold hain. [Q10]

South Atlantic Current Circle (Gyre)

- South Atlantic anticlockwise gyre mein shamil: South Equatorial Current, Brazil Current, West Wind Drift/South Atlantic Current, Benguela Current — **Canary Current is circle ka part NAHI** hai (North Atlantic ki current hai). [Q11]

North Atlantic Ocean Currents

- North Atlantic mein flow karte hain: Gulf Stream, Norwegian, Florida (sab warm currents) — **Benguela North Atlantic mein NAHI** hai (South Atlantic cold current hai). [Q12]

Peruvian/Humboldt Current — Odd One Out

- Benguela, Brazilian, South Equatorial — Atlantic Ocean se related; **Peruvian (Humboldt) Current** odd hai — SE Pacific ki cold current hai (South America west coast). [Q13]

Salinity, Tides, Currents — Mixed True/False

- Ocean salinity **Tropic of Cancer/Capricorn ke around maximum** hoti hai (kam rainfall + high evaporation) — TRUE statement. Tides exactly 12h30m ke baad NAHI aati; Benguela Atlantic ki hai, Pacific ki NAHI; Sun-Moon-Earth alignment **spring tide** (bada, chota nahi) banata hai. [Q14]

Cold vs Warm Current Identification (More Sets)

- Peruvian/Humboldt Current = **cold** — Kuroshio, Gulf Stream, Brazil Current warm hain. [Q15]
- Humboldt Current **SE Pacific** mein hai, North Pacific NAHI — Brazil-S.Atlantic, Gulf Stream-N.Atlantic, Agulhas-Indian Ocean sab correct pairs hain. [Q16]

EXAM TRAP

- Humboldt Current South-East Pacific mein hai (North Pacific NAHI) — yeh common wrong pairing hai. [Q16]

Gulf Stream

- **Gulf Stream** = **North Atlantic** ki powerful warm current — Gulf of Mexico mein Florida Current se start, Antilles Current se merge, Cape Hatteras se hoke US east coast ke saath flow karti hai. 1513 mein Juan Ponce de León ne discover kiya tha. [Q17]

Benguela aur Guinea Currents

- Map mein South-to-North flow karti cold current = **Benguela** — doosri current **Guinea Current** hai. [Q18]

Currents — Ocean aur Nature Matching

- Gulf Stream-Warm current, West Wind Drift-westerly wind belt mein slow eastward water movement, Peru Current-Pacific Ocean, West Australian Current-Indian Ocean. [Q19]

Equatorial Counter-Current

- Equatorial Counter-Current (West→East flow) North aur South Equatorial Currents (East→West) ke beech hoti hai — **dono equatorial currents ka convergence** (western ocean-basin mein water pile-up se pressure-gradient force banta hai) isse explain karta hai — Earth's rotation akela sufficient explanation NAHI hai. [Q20]

Pacific Ocean Currents

- Pacific Ocean se associated: Kuroshio, California, Humboldt — **Canary Current Pacific ki NAHI** hai (North Atlantic ki hai). [Q21]

Atlantic Ocean Current

- Given options mein Atlantic Ocean ki current: **Benguela** (S.Atlantic, SW Africa coast) — Humboldt(SE Pacific), California(NE Pacific), Alaska(NE Pacific) sab Pacific ki hain. [Q22]

Warm Current Identification

- Warm currents: Brazil Current, Gulf Stream, Kuroshio — Cold currents: Falkland, Labrador, Canary. Given options mein warm: **Brazil Current**. [Q23]
