

The Cyclones — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Chapter 37_The_Cyclones

Topic Index

1. Jet Streams aur Cyclone Eye
2. Cyclone Center — Surface Winds
3. Warm Front vs Cold Front — Rainfall
4. Tornadoes
5. Typhoon — China Sea
6. Tropical Cyclones — Regional Names
7. Regional Cyclone Names — Multi-set Matching
8. Hurricane — Saffir-Simpson Scale
9. Barometer — Mercury Fall
10. Cyclones — India ko Affect Karne Wale
11. South Atlantic/SE Pacific — Cyclones Absent
12. Global Warming — Cyclones/Storms/Hurricanes
13. 2019 Typhoons/Hurricanes — Affected Regions

Jet Streams aur Cyclone Eye

- Jet streams **dono hemispheres** mein hoti hain (Statement 1 galat, sirf N.Hemisphere mein NAHI) — **sirf kuch cyclones mein eye develop hoti hai** (Statement 2 TRUE); eye ke andar temperature surrounding se **higher** hota hai, lower NAHI (Statement 3 galat, kaha gaya tha 10°C kam hai). [Q1]

⚠ EXAM TRAP

- Cyclone ki eye ke andar temperature surrounding se **higher** hota hai (~10°C warm ~12km altitude pe, surface pe ~0-2°C), lower NAHI — common wrong statement. [Q1]

Cyclone Center — Surface Winds

- Surface winds cyclone center ki taraf **spiral inward** hoti hain (A TRUE) — **R bhi TRUE hai lekin sahi explanation NAHI** (eye mein air descend karti hai, lekin yeh surface ki inward spiral ka cause nahi hai — asal cause pressure-gradient force, Coriolis force, aur friction hain). [Q2]

Warm Front vs Cold Front — Rainfall

- Cyclone diagram mein **Cold Front (D)** area mein heavy torrential short-duration rainfall + thunderstorms hote hain — warm air ko cold front peeche se force karta hai upward, cumulus clouds develop hoti hain, rapid droplet-fall + rising air se lightning/thunder banta hai. Warm front (A) mein gradual precipitation hota hai. [Q3]

Tornadoes

- Cited exam ka conventional answer: Tornadoes **Caribbean Sea** mein originate hote hain (purani textbook usage). [Q4]
- **USA** ko generally Tornadoes se associate kiya jaata hai — dark funnel-shaped cloud, sky se ground tak — Caribbean aur American region especially prone hain. [Q5]
- **Mississippi Plains** = USA ka 'Tornado Alley' kehata hai (central+southern Great Plains ka core high-frequency zone) — boundaries officially fixed nahi hain. [Q6]
- Tornado intensity measure karne ke liye **Fujita Scale (F-Scale)** use hota hai — Ted Fujita ke naam pe. [Q7]

Typhoon — China Sea

- **Typhoon** = **China Sea** (mid-northern hemisphere, ~100°E-180°E) mein develop hone wala mature tropical cyclone hai. [Q8]

Tropical Cyclones — Regional Names

- Regional names: Australia-**Willy-Willy**, China-**Typhoon**, India-**Cyclone**, USA-**Hurricane**. [Q9]
- **Willy-Willy** = **North-West Australia** ka tropical cyclone. [Q10]

Regional Cyclone Names — Multi-set Matching

- Willy-Willy-Australia, Hurricane-USA, Typhoon-China, Baguio-Philippines. [Q11,Q12]
- Willy-Willies-Australia, Taifu-Japan, Baguio-Philippines, Hurricane-USA. [Q13]

Hurricane — Saffir-Simpson Scale

- **Saffir-Simpson Scale** = hurricane damage/wind-speed measure karta hai — 1-5 scale pe classify karta hai potential property damage aur coastal flooding estimate karne ke liye. [Q14]

Barometer — Mercury Fall

- Barometer mein mercury ka sudden fall **stormy weather** (westerly winds ke baad violent storm) ka indicator hai. [Q15]

Cyclones — India ko Affect Karne Wale

- Aila, Thane, Neelam ne **India** ko affect kiya — **Nargis India ko NAHI** affect kiya (mainly Myanmar ko affect kiya). [Q16]

South Atlantic/SE Pacific — Cyclones Absent

- South Atlantic aur South-Eastern Pacific tropical latitudes mein cyclones nahi bante kyunki **sea surface temperature low** hota hai — most proximate reason. [Q17]

| Global Warming — Cyclones/Storms/Hurricanes

- Global warming se **cyclones, storms, AUR hurricanes** — teeno ki frequency+severity badhti hai (exam-intended answer). [Q18]

| 2019 Typhoons/Hurricanes — Affected Regions

- Dorian-Bahamas, Hagibis-Japan, Lekima-China, Mitag-Jeju(South Korea) — Aug-Sep 2019 ke storms. [Q19]
