Chapter 38_The_Humidity

Topic Index

1. Humidity aur Latitude/Temperature
2. Humid Heat — 'Muggy' Weather
3. Humidity — Definition
4. Cloudy Night — No Dewdrops

Humidity aur Latitude/Temperature

- Atmosphere mein moisture ki amount **latitude se related** hai (A TRUE) — moisture ko water-vapour form mein rakhne ki ability **temperature se related** hai (R TRUE, sahi explanation): Tropical ~2.6%, 50° lat ~0.9%, 70° lat ~0.2%. ~90% atmospheric moisture ground se 5km ke andar milti hai. [Q1]

Humid Heat — 'Muggy' Weather

- Summer mein high humidity ke time weather '**Muggy**' feel hota hai — Absolute humidity = per unit volume air mein water vapour ka weight (grains/cubic foot mein). [Q2]

Humidity — Definition

- **Humidity** = air mein **moisture ki presence** ka result hai — atmosphere mein present water vapour hi humidity kehlati hai. [Q3]

Cloudy Night — No Dewdrops

- Cloudy night pe dew NAHI banti kyunki **clouds Earth ki radiation ko wapas reflect kar dete hain** — greenhouse-jaisi condition banti hai, surface relatively warm rehta hai, isliye required cooling nahi hoti aur dew-formation ke liye conditions unfavourable ho jaati hain. [Q4]
