

The World Climate — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Chapter 44_The_World_Climate

Topic Index

1. Day-Night Length Variation — Revolution + Axis Tilt
2. Continental Interior — High Annual Temperature Range
3. Climate ka Main Factor — Latitude
4. Earth ka Maximum Area — Arid Region
5. Equatorial Region — Year-round Rainfall
6. Daily Weather Pattern — Equatorial Region
7. Asia — Sabhi Climatic Zones
8. Equatorial Climate — Ethiopia Exception
9. Mediterranean Climate — Warm-Dry Summer, Mild-Wet Winter
10. Tropical Savannah — Distinct Dry/Wet Seasons
11. Equatorial Region — Plants ke liye Achha, Humans ke liye NAHI
12. Mediterranean Climate — New York Exception
13. Mediterranean Climate — Winter Rainfall Mechanism
14. Mediterranean — Winter Rain aur Pressure Belt Shift
15. Central Asian Steppe — Extreme Climate, Nomadic Herders
16. Climate Zone-Rainfall Pattern Matching
17. Map Region — Mediterranean (California)
18. Winter Rainfall — Norway
19. Climate-Country Matching
20. Region-Climate Type Matching
21. Climate Type — Region Matching
22. Climate Statements — True/False Analysis
23. Mediterranean — Winter Rain aur Westerlies
24. NW Europe Ports — Saal Bhar Open
25. Western Europe — Saal Bhar Rainfall, Westerlies Belt
26. Marine West Coast Climate — Characteristics
27. Climate Data — Mediterranean Identification
28. Pressure Belt Shifting — Mediterranean aur Monsoon
29. Zaire se Netherlands — Climate Sequence
30. World Records — Wettest, Coldest Places
31. El-Nino aur Southern Oscillation — Weak Monsoon
32. La Nina vs El Nino — Common Misconceptions
33. El-Nino — Pacific Ocean mein Develop
34. El-Nino — Warm Current aur Plankton Increase
35. Southern Oscillation — Pacific aur Indian Ocean
36. El Nino/La Nina — Storm NAHI, Climate Patterns Hain
37. Climate Data — Western European Type Identification
38. Climate Data — China Type Identification
39. Graph — Wet and Dry Tropical Zone

40. Hekistotherms — Very Low Temperature Plants

41. 'Vegetation = True Index of Climate' — Koppen

42. Mediterranean Climate — Pampas Exception

Day-Night Length Variation — Revolution + Axis Tilt

- Seasonal day-length variation **Earth's revolution around Sun AUR axis ka inclination** ki wajah se hoti hai — rotation aur latitude iske direct causes NAHI hain (statements 2,4 correct hain). [Q1]

Continental Interior — High Annual Temperature Range

- Continental interiors ka annual temperature range coastal areas se zyada hota hai kyunki **land-water thermal difference** (land jaldi garam/thanda hota hai, ocean slowly heat absorb/release karta hai) — altitude difference, strong interior winds, heavy interior rain iske reasons NAHI hain. [Q2]

Climate ka Main Factor — Latitude

- Kisi bhi area ki climate determine karne wala main factor **Latitude** hai — climate belts alag-alag latitudes ke hisaab se divide kiye gaye hain. [Q3]

Earth ka Maximum Area — Arid Region

- Earth ka ~1/3 area **Arid regions** se covered hai — semi-arid, sub-humid, humid regions se zyada. [Q4]

Equatorial Region — Year-round Rainfall

- 5°-8° latitude (equator ke dono taraf) mein year-round rainfall hoti hai (A TRUE, equatorial region 0°-10° tak extend) — high temperature+humidity ki wajah se **convictional rainfall mostly noon ke baad** hoti hai (R TRUE, sahi explanation). [Q5]

Daily Weather Pattern — Equatorial Region

- Description (clear+bright morning, sea breeze, heat badhne se dark clouds, thunder+lightning ke saath rain, phir jaldi khatam) = **Equatorial** region ki hai. [Q6]

Asia — Sabhi Climatic Zones

- Earth ki 3 climate zones: tropical, temperate, cold — **Asia** equatorial se North Pole tak extend hota hai, isliye **sabhi climatic zones** yahan milte hain. [Q7]

Equatorial Climate — Ethiopia Exception

- Congo, Gabon, Zaire equatorial line pe hain — **Ethiopia equatorial climate category mein NAHI** aata. [Q8]

Mediterranean Climate — Warm-Dry Summer, Mild-Wet Winter

- Given features (warm+dry climate, mild+wet winter, evergreen oak trees) = **Mediterranean** region ki characteristics hain. [Q9]

Tropical Savannah — Distinct Dry/Wet Seasons

- Tropical Savannah ki characteristic climate = **clear dry aur wet season** — high temperature saal bhar (koi month 20°C se kam nahi), avg annual rainfall 500-2000mm. [Q10]

Equatorial Region — Plants ke liye Achha, Humans ke liye NAHI

- Equatorial region ka environment plants ke liye conducive hai, humans ke liye NAHI (A **TRUE**) — average annual temperature difference bahut kam hai (R bhi **TRUE** independently, lekin R, A ki sahi explanation NAHI hai — asal reason humidity+disease-proneness hai, temperature-difference nahi). [Q11]

Mediterranean Climate — New York Exception

- Mediterranean climate ~30°-40° latitude pe continents ke western parts mein hoti hai (Los Angeles, Rome, Cape Town) — **New York (US east coast) mein NAHI** hoti. [Q12]

Mediterranean Climate — Winter Rainfall Mechanism

- Mediterranean climate mein winter mein rainfall hoti hai (A **TRUE**) — summer mein dry terrestrial winds ka influence hota hai (R bhi **TRUE** independently, lekin sahi explanation NAHI hai — asal reason: winter mein westerlies equatorward shift hoti hain, jo temperate cyclones se associated hoke moist rainfall laati hain). [Q13]

Mediterranean — Winter Rain aur Pressure Belt Shift

- Mediterranean mein winter rainfall hoti hai (Statement 1 **TRUE**) — winter solstice ki wajah se pressure belts south ki taraf shift karte hain, lekin yeh sirf **Northern Hemisphere ke liye** **TRUE** hai (Southern Hemisphere winter mein north ki taraf shift hote hain) — is specific question mein Statement 2 accepted as **TRUE** hai (dono statements correct). [Q14]

Central Asian Steppe — Extreme Climate, Nomadic Herders

- Description (extreme climate, scanty rainfall, nomadic herders) = **Central Asian Steppe** ki hai. [Q15]

Climate Zone-Rainfall Pattern Matching

- Correct: **Equatorial Zone-rain with thunder in noon** — Mediterranean actually winter rain (summer nahi), Monsoon actually seasonal(saal bhar nahi), Desert actually negligible/indefinite rain (winter nahi). [Q16]

Map Region — Mediterranean (California)

- Hot-dry summer + mild-moist winter + seasonal wind reversal characteristics = **Mediterranean climate** (California, labeled 1 on map). [Q17]

Winter Rainfall — Norway

- Given countries mein winter mein rainfall: **Norway** (Western European climate type, 40°-65° latitude, saal bhar sufficient+even rainfall) — China mein bhi rainfall hoti hai lekin winter relatively dry hoti hai. [Q18]

Climate-Country Matching

- Correct: **Wet winter dry summer-Italy** (Mediterranean) — Sudan actually tropical(desert areas mein negligible rain), Iran actually hot-dry(long hot summers), Chile mein northern part hot-dry lekin west-central Mediterranean climate hai (poora saal dry nahi). [Q19]

Region-Climate Type Matching

- California-Mediterranean, West Australia-Hot Desert, Bangladesh-Tropical Monsoon, Siberia-Cold Temperate. [Q20]

Climate Type — Region Matching

- Equatorial-Congo, Mediterranean-California, Monsoon-Bangladesh, Savannah-Sudan (Savannah bhi 'Sudan-type climate' kehlati hai). [Q21]

Climate Statements — True/False Analysis

- Equatorial regions mein **sirf 2 seasons** (summer+winter) hote hain, 4 NAHI (Statement 1 galat) — Mediterranean mein **winter mein zyada rain** (summer nahi, Statement 2 galat) — China-type climate mein **saal bhar rainfall** hoti hai (Statement 3 TRUE) — Tropical highlands mein **vertical zonation** hoti hai (Statement 4 TRUE). [Q22]

Mediterranean — Winter Rain aur Westerlies

- Mediterranean regions mein rainy winters hote hain (A **TRUE**) — winter mein westerlies belt mein aate hain (R **TRUE**, sahi explanation) — summer mein pressure belts poleward shift hote hain, subtropical high expand hoti hai (dry summer). [Q23]
- Mediterranean regions **winter** mein heavy rainfall receive karte hain. [Q24]

NW Europe Ports — Saal Bhar Open

- NW Europe ke ports saal bhar khule rehte hain (A **TRUE**) — SW winds saal bhar bahti hain (R bhi **TRUE** **independently**, lekin sahi explanation NAHI — asal reason North Atlantic Drift ka warm water hai, jo nearby oceans ko freeze hone se rokta hai). [Q25]

Western Europe — Saal Bhar Rainfall, Westerlies Belt

- Western Europe (marine west-coast climate sense mein) saal bhar rainfall receive karta hai (Statement 1 TRUE) — westerlies belt mein located hai (Statement 2 bhi TRUE) — dono statements sahi hain. [Q26]

Marine West Coast Climate — Characteristics

- Given description (low annual/daily temp range, year-round precipitation, 50-250cm rainfall) = **Marine West Coast climate** hai — Mediterranean ke poleward mein (NW Europe, N.America west coast California ke north, S.Chile, SE Australia, NZ). Summer avg 15-20°C, winter avg 4-10°C. [Q27]

Climate Data — Mediterranean Identification

- Given temp/rainfall data (winter mein zyada rain, June-July negligible rain, avg temp 12.8°C, avg rainfall 54.9cm) = **Mediterranean region** ka pattern hai — saal bhar temperature mein zyada variation nahi. [Q28]

Pressure Belt Shifting — Mediterranean aur Monsoon

- Pressure belts ke shifting se associated climates: **Mediterranean AUR Monsoon** — subtropical high-pressure belts (30°-35°) summer mein trade winds, winter mein equator ki taraf shift; monsoon winds bhi isi shifting se develop hote hain. [Q29]

Zaire se Netherlands — Climate Sequence

- Zaire (Central Africa) se Netherlands (W.Europe) tak sequence: **Equatorial → Hot Desert (Sahara) → Mediterranean → West European**. [Q30]

World Records — Wettest, Coldest Places

- World ka sabse zyada rainfall wala place **Mawsynram (Meghalaya, India)** hai — Cherrapunji se bhi zyada. [Q31]
- Given options mein Earth ka coldest place **Verkhoyansk (Siberia)** hai (exam-accepted answer). [Q32]
- Hottest-Sahara desert, Coldest-Antarctica, Wettest-Cherrapunji, Driest-Chile (Atacama). [Q33]

El-Nino aur Southern Oscillation — Weak Monsoon

- Short-term climatic prediction ke liye India subcontinent mein occasional weak monsoon rains **El-Nino aur Southern Oscillation** se associated hote hain — El Nino Peru coast ki taraf annual weak warm current thi, isse Indian monsoon affect hoti hai + drought-jaisi situation banti hai; La Nina iska opposite (equatorial eastern Pacific cooling) hai. [Q34]

La Nina vs El Nino — Common Misconceptions

- La Nina **equatorial Pacific Ocean** mein cold temperature ki hai (Indian Ocean mein NAHI — Statement 1 galat) — La Nina ka monsoon pe koi effect NAHI (Statement 2 galat, actually La Nina se Pacific ke western side heavy rainfall hoti hai jo Indian summer monsoon ko bhi activate kar sakti hai) — dono statements **galat** hain. [Q35]

⚠ EXAM TRAP

- La Nina **Pacific Ocean** se related hai (Indian Ocean se NAHI) — aur La Nina ka Indian monsoon pe indirect effect hota hai (koi effect nahi wala statement galat hai). [Q35]

El-Nino — Pacific Ocean mein Develop

- **El-Nino = Pacific Ocean** (eastern part, Peru coast) mein develop hota hai — surface water temperature badhati hai. [Q36, Q38]

El-Nino — Warm Current aur Plankton Increase

- El-Nino mein Peru coast (eastern Pacific) pe **warm current** appear hoti hai (Statement 1 TRUE) — yeh warm current water temperature $\sim 10^{\circ}\text{C}$ badha deti hai, **Plankton ki matra BADHATI NAHI, GHATATI hai** (Statement 2 galat — actual effect: upwelling slow ho jaata hai, plankton kam ho jaate hain, fish bhi kam ho jaati hain). [Q37]

⚠ EXAM TRAP

- El-Nino se Plankton ki matra **BADHATI NAHI balki GHATATI** hai (upwelling process slow/stop hone se) — yeh common wrong statement hai. [Q37]

Southern Oscillation — Pacific aur Indian Ocean

- **Southern Oscillation = Pacific aur Indian Ocean** ke beech pressure seesaw pattern hai. [Q39]

El Nino/La Nina — Storm NAHI, Climate Patterns Hain

- El Nino aur La Nina **storm NAHI** hain — yeh climate patterns hain (galat statement identify karna tha) — El Nino se central/eastern Pacific water temperature badhta hai, phytoplankton coast ke paas kam ho jaate hain (upwelling slow); La Nina mein trade winds normal se strong ho jaati hain. [Q40]

Climate Data — Western European Type Identification

- Given data (avg temp $15^{\circ}\text{--}21^{\circ}\text{C}$, saal bhar sufficient rainfall, summer mein thoda kam) = **Western European type** climate hai (Northern Hemisphere) — May-June-July mein kam rainfall dikhti hai data mein. [Q41]

Climate Data — China Type Identification

- Given data (saal bhar rainfall, summer mein zyada, summer avg temp $24\text{--}26.6^{\circ}\text{C}$) = **China type** climate ki characteristics hain. [Q42]

Graph — Wet and Dry Tropical Zone

- Given graph (temperature 15°-25°C, April-May-June mein heaviest rainfall ~25cm se kam) = **Wet and Dry Tropical** zone ko indicate karta hai. [Q43]

Hekistotherms — Very Low Temperature Plants

- Hekistotherms** = very low temperature areas (tundra, mountains, Alpine forests) mein ugne wale plants. [Q44]

'Vegetation = True Index of Climate' — Koppen

- 'Vegetation is the true index of climate' statement **Koppen** se associated hai (1884 mein descriptive classification, later revised 1918/1931/1936) — Candolle ke 1874 ke 5 vegetation zones ko basis banaya. Thornthwaite ne bhi baad mein vegetation ko indicator maana, lekin rainfall+temperature+evaporation pe zyada focus kiya (precipitation effectiveness). [Q45]

Mediterranean Climate — Pampas Exception

- Central Chile, Cape Town, Adelaide mein Mediterranean climate hoti hai — **Pampas mein NAHI** (Pampas ki climate temperate hai, ~600-1200mm precipitation, north mein subtropical aur west mein semi-arid ho jaati hai — Argentina/Uruguay/Brazil's Rio Grande do Sul cover karta hai, ~750,000 sq km). [Q46]
