

The Mapping — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Chapter 51_The_Mapping

Topic Index

1. Isobars/Isopleth Maps — Weather Map Example
2. Isogonic Lines — Magnetic Declination
3. Isobaths — Equal Depth (Water)
4. Sea Voyage Map — Ferdinand Magellan
5. Contours — Relief Features ka Most Accurate Method
6. Isohyet — Same Rainfall Areas Joining Line

Isobars/Isopleth Maps — Weather Map Example

- Isobars dikhaane wala daily weather map **Isopleth map** ka example hai — continuous distribution data ko generalize+simplify karta hai (third dimension ke roop mein) — surface elevation, precipitation, atmospheric pressure jaisi measurements ke liye common. [Q1]

Isogonic Lines — Magnetic Declination

- **Isogonic lines** = Earth surface pe wo points jinka **magnetic declination same** hota hai, unhe join karne wali imaginary lines. [Q2]

Isobaths — Equal Depth (Water)

- **Isobaths** = water surface ke neeche equal depth ke points ko represent karti hain. [Q3]

Sea Voyage Map — Ferdinand Magellan

- Given sea-voyage route map **Ferdinand Magellan** (Portuguese explorer, 1480-1521) ke route ko dikhata hai — uski expedition ne Earth ki first circumnavigation complete ki. [Q4]

Contours — Relief Features ka Most Accurate Method

- **Contours** relief features represent karne ka sabse accurate method hain — equal elevation points ko join karne wali imaginary lines — close contours = steep slope, far-apart contours = gentle slope. [Q5]

Isohyet — Same Rainfall Areas Joining Line

- **Isohyet** = same rainfall receive karne wali jagah ko join karti hai — Isobar (same atmospheric pressure), Isotherm (same temperature), Isohaline (same salinity) alag-alag concepts hain. [Q6]
