

DEFENCE TECHNOLOGY — FULL MIND MAP

रक्षा प्रौद्योगिकी · Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. DRDO, Quantum Lab & Next-Generation Missile Technology
2. IGMDP & Core Indian Missile Systems
3. Fighter Aircraft, Airlift, AWACS & Submarines
4. Agni Series, Radar, Missile Programme & Shourya
5. Indigenous Combat Platforms & Naval Systems
6. Ballistic vs Cruise Missiles & BrahMos
7. UAVs, Fighter Technology, AESA, THAAD & FOBS
8. Arms Control, Export Regimes & NATO
9. Operations, DefExpo, Naval Forums & Joint Military Exercises

1. DRDO, Quantum Lab & Next-Generation Missile Technology

- Defence research and Development Organisation (DRDO) India government ke Ministry of Defence me Department of Defence Research and Development ke under major Agency hai. 2021 ke dauran, Indian Army ne Madhya Pradesh ke Mhow me Military College of Telecommunication Engineering me ek quantum computing laboratory established ki. Mission Divyastra indigenously developed Agni-V missile ke pehle flight test ko refer karta hai jo 'Multiple Independently Targetable Re-entry Vehicle' (MIRV) technology se equipped hai. [Q1–Q3]
- Very Short-Range Air Defence System (VSHORADS) DRDO dwara developed 4th-generation, technical roop se advanced miniaturized, man-portable air-defence system (MANPADS) hai. Rudram-I DRDO dwara developed ek New Generation Anti-Radiation Missile (NGARM) hai. Ye India ki pehli indigenous anti-radiation air-to-surface missile hai. Rudram-II ek air-to-surface anti-radiation missile system (air-to-air nahi) hai. Isliye, statement 1 incorrect hai. [Q4–Q6]

2. IGMDP & Core Indian Missile Systems

- Nag IGMDP ke under India me developed "Fire and Forget" 3rd-generation anti-tank guided missile hai. Prithvi ek surface-to-surface missile hai (A-3). Pinaka India me produced aur DRDO dwara developed ek multiple rocket launcher hai, ye ek guided missile nahi hai. Agni, Aakash aur Nag sabhi guided missile hain. [Q7–Q9]
- Trishul Integrated Guided Missile Development Programme (IGMDP) ke ek part ke roop me India dwara developed short-range surface-to-air missile hai. Nag (NAG) 3rd-generation anti-tank guided missile correctly matched hai. Prithvi India ki pehli indigenous developed surface-to-surface ballistic missile hai, jise IGMDP ke under DRDO dwara develop kiya gaya hai. [Q10–Q12]
- Trishul short-range surface-to-air missile hai (A-3). Aakash medium-range surface-to-air missile hai (A-2). Nirbhay India ki pehli indigenously designed aur developed long-range *subsonic* (supersonic nahi) cruise missile hai. Isliye statement 4 incorrect hai. [Q13–Q15]
- Astra DRDO dwara developed beyond-visual-range air-to-air Missile (BVRAAM) hai. Initial versions ki range 80 km tak thi (na ki 90 km jaisa ki option d me strictly se kahaa gaya hai). Isliye, commission ne statement (d) ko incorrect maana. Astra Defence Research and Development Organisation dwara developed all-weather me kaam karne wali 'beyond-visual-range air-to-air Missile' (BVRAAM) hai. Ye India dwara developed pehli air-to-air missile hai. Astra enemy aircraft ko target banane ke liye fighter aircraft se launch kiye jane ke liye developed ek air-to-air missile hai. [Q16–Q18]
- Astra (ASTRA) ek indigenous beyond visual range (BVR) air-to-air missile hai. Light Combat Aircraft (LCA) Tejas ne gova ke tata se lagbhag 20,000 pheeta ki elevation par iska successful test kiya. Astra DRDO dwara developed ek active Radar homing beyond-visual-range air-to-air Missile hai. Missile ka pehli baar 9 mae, 2003 ko baalaasor (odisha) me successfully test kiya gaya tha. Trishul, ek supersonic surface-to-air missile programme, technical technical issues aur delays ki wajah se 2008 me DRDO dwara official taur par banda (shelved) kar diya gaya tha. [Q19–Q21]
- Trishul ko short-range ki, taur par pratikriya wali, supersonic surface-to-air missile ke roop me design kiya gaya tha. Die gaye options me, Nag Missile ki range sabse kam hai. Iske ground based version ki maximum range 4 km hai. 'Agni' naam IGMDP ke under India dwara developed Surface to surface ballistic missile (medium se intercontinental range) ki series se related hai. [Q22–Q24]
- Statement (b) incorrect hai kyunki kuch engineer ya praakritik roop se paae jane wale vaayaras (jaise baiktariyopheja) specific harmful baiktariy ko lakshit karke ya pradooshakon ko neecha dikhaane me help karke paryavaran ko sakaaraatmak roop se prabhavit kar sakte hain, isliye paryavaran pradooshan ko kam kar sakte hain. Statement (c) incorrect hai kyunki Trishul, jise short-range surface-to-air missile ke roop me develop kiya gaya tha, ki effective range kevala 9 km thi, 30 km nahi. Ye project 2008 me official taur par banda kar di gayi thi. Navanbar 2006 me, DRDO ne ek antarasepshan test kiya jisme ek ekso-etamospherika haaparasonik antaraseptar Missile ne 'dushman' Prithvi Missile Lakshya ko nashta kar diya. Statement 1 sahi hai. [Q25–Q27]

EXAM TRAP — Q25 & Q27 — Source Context Needs Care

- ▶ Q25 ka explanation defence-topic se unrelated virus/environment fact deta hai. Source coverage preserve ki gayi hai, lekin ise defence concept ke roop me memorize na karein.
- ▶ Q27 me Prithvi-II attacking surface-to-surface missile hai; metro defence ke liye interceptor/PAD concept alag hai.

3. Fighter Aircraft, Airlift, AWACS & Submarines

- Listed aircrafton me se koi bhi paanchaveen generation ka fighter aircraft nahi hai. Raaphel aur Tejas MK-1 ko 4.5veen generation ka 'omaneerola' / malteerol aircraft maana jata hai. Miga-29 4th generation ka ladaakoo jeta hai. C-130J supara

harakyoolis ek highly advanced chaara-engine tarboprop sainya parivahan aircraft hai jo lokahid maartin eyaronotiks dwara built hai, jiska mukhyalay The United States of America me hai. Ilyushin IL-78 ek Soviet chaara engine wala havaaee fuel bharane wala Tankra hai. Indian Air Force aircraft ko 'MARS' (mida-Air riphyyooling System) ke roop me refer karti hai. [Q28–Q30]

- BMP-II ek ubhayachar inphaintree ladaakoo vaahan (jameena/water se ladane wala vaahana) hai, aircraft nahi. BMP-II ke Indian version ko Sarath (BMP-II) (Sarath) ke naam se jana jata hai. INS arihant (Arihant) India ki nuclear energy operated Submarine hai (A-4). INS Chakra 8,140 tana ki akulaa category ki, Nuclear-powered submarine hai, jise Russia se patte (lease) par liya gaya hai, jise aprail 2012 me Indian Navy me shamil kiya gaya tha. [Q31–Q33]
- INS Sindhurakshak Indian Navy ki Russian built deejala-ilektrika Submarine thi. Dukhad baata ye hai ki agasta 2013 me isme bhishan aaga laga gayi aur ye Mumbai ke nausainik dokayard me dooba gayi. INS Viraat aur INS Vikrant aircraftvaahak pota (aircraft carriers) hain. INS arihant India ki pehli indigenous built Nuclear-powered submarine hai. Ise agasta 2016 me Indian Navy me shamil kiya gaya tha. [Q34–Q35]

4. Agni Series, Radar, Missile Programme & Shaurya

- Agni-I (Agni-I) surface-to-surface par maara karne wali short-range ki ballistic Missile (SRBM) hai. Ye Prithvi Missile aur long-range Agni-II ke beech ki seemaa ke antara ko paatata hai. 28 maarcha, 2010 ko odisha tata par vthilar dweepa (Wheeler's Island) se 700 km ki range wali nuclear-Saksham surface-to-surface par maara karne wali Agni-I ballistic Missile ka successfully test kiya gaya tha. Dhanush Missile Prithvi Missile ka nausainik (naval) version hai. Iski range 350 kilomeetar hai. [Q36–Q38]
- Agni-II (AGNI-II) ek madhyam distance ki surface-to-surface ballistic missile hai jisakee effective range 2000-2500 km hai. Ise IGMDP ke under develop kiya gaya tha. Hansaa flight prashikshan (flight training) ke liye ek general aircraftn havaaee jahaaj hai. Ise India ki National eyarospes laboratoryon (NAL) dwara design kiya gaya tha. Hansaa-2 iske sanskaranon me se ek hai. Phaalkan (Phalcon) cruise missile nahi hai; ye ijaraail (Russia nahi) dwara built ek eyaraborn arlee vaarning lessaand enda kantrol (AEWC&C) Radar system hai. India ne ye system Israel se khareeda hai. Isliye yugma (b) incorrect hai. [Q39–Q41]
- India ne ijaraail se phaalkan eyaraborn arlee vaarning lessaand enda kantrol (AEWC&C) Radar system mila ki hai. India ne Israel se 'baraaka' anti-Missile defence system khareedee. Moola baraak Missileen Indian Navy ke jahaajon jaise aircraftvaahak pota aaeenaes viraat (INS Virat) par tainaat ki gayi thin. Baraaka-8 (Barak-8) madhyam se long-range surface-to-air missile (SAM) system hai jise India ke DRDO (DRDO) aur ijaraail eyarospes indastreej (IAI) dwara joint roop se develop kiya gaya hai. [Q42–Q44]
- Indian Navy ke liye ek human rahita (paayalata rahita) heleekoptar ko India ke hindustaan eyaronotiks limited (HAL) aur ijaraail eyarakraapht indastreej (IAI) dwara joint roop se develop kiya gaya hai. Franceeese eyarospes kanpanee Dassault Aviation ne 2016 me hastaaksharit ek saude ke under Indian Air Force ko 36 raaphel malteerol phaaitar jeta ka development aur aapoorti ki. Arjun Indian Army ke liye DRDO dwara developed ek modern teesri generation ka main yuddhak Tank (MBT) hai. [Q45–Q47]
- T-90S ek Russian moola ka main yuddhak Tank hai. India me avaadee (Avadi) located hevee vthikals phaiktree me indigenously asenbal kiye gaye pehle aise Tank ka naam 'Bhishma' rakha gaya tha. Question me aithaasik ashuddhiyan hain. 25 janavaree 2002 ko jisa Missile ka test kiya gaya tha wo Agni-I (jisakee range 700 km hai) thi, Agni-II nahi. Agni-II, surface-to-surface par maara karne wali madhyam distance ki ballistic Missile ka niyमित roop se odisha ke Chandipur ke paas do epeeje abdula kalaam dweepa (former me vthilar dweepa) par integrated test range (ITR) se test kiya jata hai. [Q48–Q50]
- Agni-II ek madhyam distance ki ballistic Missile (MRBM) hai jisakee range 2000-2500 km hai. Agni-IV long-range, nuclear-Saksham surface-to-surface ballistic missile hai. Isliye, statement 1 sahi hai. Ye statement "ye full form se indigenous nahi hai" incorrect hai. Agni-V missile poori tarah se India ke DRDO dwara developed poori tarah se indigenous intercontinental ballistic Missile (ICBM) hai. [Q51–Q53]
- Indian defence sandarbh me, 'indraa' (INDRA - Indian Doppler Radar) Army aur Air Force ke liye India ke DRDO dwara developed 2D Radar ki ek series hai. Ye India me design aur built pehli badi Radar system thi. Prithvi-II Missile (Prithvi surface-to-surface ballistic missile ka Air Force sanskarana) ka pehli baar 27 janavaree 1996 ko odisha ke Chandipur test range se test kiya gaya tha. 8 June 2006 ko do. E.pee.je. Abdula kalaam fighter aircraft me flight bharane wale India ke pehle raashtrapati bane. unhone Shukoi-30 emakeaeee (Sukhoi-30 MKI) fighter aircraft me flight bharee thi. [Q54–Q56]
- Mae 1992 me, The United States of America ne kraayojenik engine technology ko India me sthanaantarit karne se rokane ke liye Missile technology control vyavasth (MTCR) ke under Indian Space Research Organization. Aur Russian space Agency glaavakosmos par pratibandh (do saala ka pratibandha) lagaa diya tha. Do. E.pee.je. Abdula kalaam ne India me 'integrated nirdeshit Missile development programme' (IGMDP) ke development me important bhoomika nibhaaee, jisne Agni aur Prithvi jaisee indigenous Missileen ko janma diya. Unhe 'India ke Missile maina' ke roop me jana jata hai. Shaury (Shaurya) DRDO (DRDO) dwara developed ek kanastara-prakshepita (canister-launched) haaiparasonik surface-to-surface par maara karne wali saamarik Missile hai. Iski range 700 se 1,900 km ke beech hai. [Q57–Q59]
- Shaury ek haaiparasonik surface-to-surface missile hai. Haalaanki anumaan alaga-alaga hain, teston ke dauran iski announced official seemaa 1000 kilograam peloda ke saath lagbhag 700 km thi (na ki specially 900 km par kaipa ki gayi). Is pareeksha question ke context me statement (c) ko incorrect maana gaya tha. Statement 1 incorrect hai kyonki shaury Missile ki maximum speed usually 7.5 maika (8 maika se zyada nahi) bataaee jati hai. [Q60–Q61]

⚠ EXAM TRAP — Q39 & Q49 — Missile Classification / Historical Mismatch

- ▶ Q39 source wording Agni-II ko ICBM bolti hai, jabki ~2000–2500 km range ke hisaab se ise MRBM/IRBM-class context me samjhein; true ICBM threshold kaafi higher hota hai.
- ▶ Q49 source itself disputed/incorrect statements mark karta hai: 25 Jan 2002 test ko Agni-II se jodna historical mismatch hai; explanation Agni-I identify karta hai.

5. Indigenous Combat Platforms & Naval Systems

- Tejas Indian Air Force ke liye hindustaan eyaronotiks limited (HAL) ke sahayog se vaimaanikee development Agency (ADA) dwara indigenously developed A light-combat aircraft (Light Combat Aircraft - LCA) hai. Tejas ek Indian singala-engine, deltaa vinga, halkaa malteerol phaaitar (fighter aircraft) hai. Aakash A missile hai, Vikrant An aircraft carrier hai aur Arjun ek main yuddhak Tank hai. Jaisaa ki establish kiya gaya hai, 'Tejas' India dwara developed Light Combat Aircraft (LCA - halkaa fighter aircraft) hai. [Q62–Q64]
- Tejas India dwara developed pehla indigenous fighter aircraft (modern Light Combat Aircraft) hai. Isane puraane miga-21 fighter aircraft ki jagaha lee. (nota: HAL HF-24 maarut 1960 ke decade ka pehla Indian developed jeta phaaitar tha, lekin modern fighter aircraft ke context me options me Tejas sahi hai). Jaisaa ki established hai, Tejas pehla India built halkaa fighter aircraft (fighter plane) hai. Edamiral gorshakov (Admiral Gorshkov) Russian Navy ka ek sanshodhit keeva-category ka aircraftvaahak pota (aircraft carrier) tha. Ise India dwara adhiplanetit kiya gaya tha aur bade paimaane par naveeneekrit karke iska naam aaeenaes vikramaaditya (INS Vikramaditya) rakha gaya tha, jo currently Indian Navy ke major jahaaj ki tarah kaam karta hai. [Q65–Q67]
- Majhagaanv doka shipabildars limited (MDL) dwara built kalavaree-category (skorpeena category) ki paanchaveen Submarine INS vaageer (Vagir) ko 23 janavaree 2023 ko Indian Navy me shamil kiya gaya tha. ICGS sameaningk (Smeaningk) Indian tatarakshak bala (Indian Coast Guard) ke liye banaya gaya ek Offshore Patrol Vessel (gashtee pota - OPV) hai. Ise agasta 2020 me launch kiya gaya tha. ICGS 'Vishwas' govaa shipayard limited dwara indigenously design aur built Offshore Patrol Vessel (gashtee pota) ke ek nae varga ka pehla pota tha. Ise 17 maarch 2010 ko Indian tatarakshak bala me shamil kiya gaya tha. [Q68–Q70]
- Question me ek tathyatmak truti hai. INS power (A57) Indian Navy ka deepak category ka ek bedaa Tankra (fleet tanker) hai. Ise India me indigenously nahi banaya gaya tha; balki, ise Italian jahaaj development kanpanee phinakaintiyaree (Fincantieri) dwara banaya gaya tha. INS Astradhaarinee India ka pehla poori tarah se indigenously design aur built Torpedo launch and recovery vessel (TLRV) hai. [Q71–Q72]

⚠ EXAM TRAP — Q65 & Q71 — “First Indigenous” Wording

- ▶ Q65 me Tejas ko first indigenous fighter kaha gaya hai; historical nuance me HAL HF-24 Marut India ka earlier indigenous jet-fighter programme tha. Exam wording/context dekhein.
- ▶ Q71 source disputed hai: INS Shakti (A57) India me indigenously built nahi thi; Deepak-class fleet tanker Italy me built hui thi.

6. Ballistic vs Cruise Missiles & BrahMos

- Cruise Missileen apni poori flight ke dauran subsonic, suparasonik ya haaiparasonik speed se jeta-chaalita hoti hain, jabki ballistic Missileen kevala flight ke early (boosta) charan me rocket-sanchaalita hoti hain. Isliye statement 1 incorrect hai. Suparasonik cruise missile 'Brahmos' Russian sangha ke NPO machineostroyeniy aur India ke DRDO ke beech ek joint udyama hai. Jaisaa ki jnyaat hai, Brahmos Supersonic missile India and Russia ke beech ek joint udyama hai. [Q73–Q75]
- Brahmos India ke DRDO aur Russia ke NPO machineostroyeniy ke beech ek joint udyama hai. Brahmos ek highly advanced suparasonik cruise missile hai. Brahmos suparasonik cruise missile ke nausainik (Naval) version ka 18 aktoobar 2020 ko Indian Navy ke indigenous built steelth Destroyer INS chennew se successfully test kiya gaya tha, jisne araba saagar me ek Lakshya ko bhedaa tha. [Q76–Q78]
- 21 maarch 2010 (22 maarch nahi) ko ek chalute Warship se Brahmos ka test kiya gaya tha. Saath hi, MTCR niyamon ki wajah se iski moola flight seemaa 290 km par seemit kar di gayi thi. Isliye question ke time (c) aur (d) donon hi sahi statement nahi the. 29 maarcha, 2009 ko, Brahmos bloka-II Missile ke lainda ataika (jameena par hamala karne wale) version ka raajasthan ke Pokharan test range me ek mobile otonomas lonchar (MAL) se successfully test kiya gaya tha. India ne aprail 2024 me Philippines ko Brahmos suparasonik cruise missileon ka pehla baicha saunpaa. (abhistatement A true hai). [Q79–Q81]

⚠ EXAM TRAP — Q79 & Q81 — BrahMos Date/Range Context

- ▶ Q79 source multiple-incorrect mark karta hai; original BrahMos range MTCR-era cap ~290 km thi, later variants ki range badhi. Test-date wording bhi option-specific hai.
- ▶ Q81 Philippines export statement current-event context ka hai; exported configuration/range ko question-year ke wording ke saath padhein.

7. UAVs, Fighter Technology, AESA, THAAD & FOBS

- Lakshya DRDO ke vaimaanikee development pratishthaan (Aeronautical Development Establishment - ADE) dwara developed ek Indian rimota operated haaee-speeda taaraget drone system (Unmanned aircraft) hai. Netraa (NETRA) ek halkaa human rahita havaaee vaahan (UAV) hai jise aaidiy phorja aur DRDO ki Pune located laboratoryon dwara sahayogaatmak roop se develop kiya gaya hai. Ise specially aatankavaad virodhee abhiyanon ke liye design kiya gaya hai aur ye 200-300 meetar ki elevation tak flight bharane me Saksham hai. Phlaaing ophisar Avani Chaturvedi ne 20 pharavaree, 2018 ko miga-21 baaisan fighter aircraft me solo (akele) flight poori karne wali Indian Air Force (IAF) ki pehli Indian mahila paayalat banakar itihaas racha diya. [Q82–Q84]
- F/A-18 supara hornet ek American fighter aircraft hai jo mainly boinga dwara banaya gaya hai. Iska mainly American Navy dwara use kiya jata hai, aur kuch hada tak ostreliy aur kuvait dwara. AESA ek advanced malteemoda, solid-state ektiva

charanabaddh saranee phaayar kantrol Radar hai. Ye high accurateta ke saath kai (Multiple) Lakshyaon ko traika karne me highly Saksham hai (puraane devicevat steeyar Radar ke opposite). Tarminal haaee elteetyood eriya defence (THAAD) ek highly advanced American anti-ballistic Missile defence system hai. Ise hit-too-kila (hit to kill) drishtikon use karke chhoti, madhyam aur madhyavartee distance ki ballistic Missileon ko maara giraane ke liye design kiya gaya hai. [Q85–Q87]

- Phraikshanal orbital bombaardament system (FOBS) ek aayudh vitaran system hai jo kam-Prithvi orbit (Low Earth Orbit) me nuclear weapon rakhti hai. Conventional ICBM ke opposite, jo ek poorvaanumaanit aarka (arc) lete hain, FOBS orbit me raha sakta hai aur apratyashit roop se apne Lakshya par gira sakta hai, jo early chetaavanee Radar ko chalessa de deta hai. [Q88]

8. Arms Control, Export Regimes & NATO

- Saamarik shastr nyooneekaran sandhiyan (START I aur START II) The United States of America (USA) aur Soviet samaajavaadee ganaraajy sangha (USSR) (aur baad me Russia) ke beech important dvipaksheey sandhiyan thin jinka purpose unke huge nuclear shastraagaar ko kam karna tha. Nyoo staart (saamarika shastr nyooneekaran sandhi) The United States of America aur Russian sangha ke beech ek nuclear weapon katautee sandhi hai jiska aupachaarik naam "saamarika aakraamak weaponon ki aage ki lessee aur seemaa ke upaaya" hai. Is par 2010 me hastaakshar kiye gaye the. June 2016 me, India aupachaarik roop se hega code opha kandakt (HCoC) me shamil hua, jo bade paimaane par vinaash ke weapon le jane me Saksham ballistic Missileon ke aprasaar ke prati apni pratibaddhata ko display karta hai. [Q89–Q91]
- Statement 1 incorrect hai kyonki vaaArmyra (Wassenaar) vyavasth oeseedee (OECD) ke under ek aupachaarik group nahi hai. Ye conventional weaponon aur dohare use wale saamaanon se related ek svaichchhik niryat control vyavasth hai. Statement I incorrect hai kyonki naato (NATO) me currently 32 member country hain (2024 me Sweden ke shamil hone ke baad), 42 nahi. Sweden ne do shataabdiyon tak tatasthata (neutrality) aur sainya gutanirapekshata ki long time se chalee aa rahi neeti ko banaye rakha tha. Bhoo-raajaneetika badalaavon se pririt hokara, Sweden official taur par 7 march 2024 ko naato ka 32vaan member bana gaya. [Q92–Q94]

⚠ EXAM TRAP — Q93–Q94 — NATO Membership is Time-Sensitive

- ▶ Sweden 7 March 2024 ko NATO ka 32nd member bana. Membership count future accessions ke saath change ho sakta hai, isliye current-exam year verify karein.

9. Operations, DefExpo, Naval Forums & Joint Military Exercises

- Opareshan pavana (Operation Pawan) 1987 ke end me shreelanka me litte (tamila taaigarsa) se jaaphana ka control lene ke liye Indian shaanti Army (IPKF) dwara chalaae gaye abhiyan ko diya gaya code naam tha. Dephaeksapo (DefExpo) ka 12vaan version aktoobar 2022 me gaandheenagara, gujaraat me organized kiya gaya tha. Iska vyapak vishay (theme) 'Path to Pride' (Path to Pride) tha, jiska purpose ghareloo defence udyoga ki taakat ko display karna tha. Statement 1 incorrect hai kyonki pehla (udghaatana) hinda mahaasaagar Navy sangoshthee (IONS) 2008 me new dillee, India me organized kiya gaya tha, na ki 2015 me. [Q95–Q97]
- Phrendaship (Druzhba)-2016 aatankavaad virodhee sahayog badhane ke liye organized Russia aur paakistaan ke sashastr balon ke beech ek aitihaasik joint sainya exercise tha. July 2017 me, maalaabaar nausainik exercise ka 21vaan version Bay of Bengal me hua, jisme India, USA aur Japan ki Navyon ne bhaaga liya. (nota: ostreliy baad me 2020 me ise chaturbhuj (quadrilateral) banane ke liye shamil hua). 'maitree' (Maitree) Indian Army aur royala thaaee Army (Thailand) ke beech sahayog aur saamarik antahkriyasheelata ko badhaava dene ke liye organized aavartee joint sainya exercise ka naam hai. [Q98–Q100]
- 2018 ki shuruaat me raajaneetik uthala-puthala aur tanaavapoorn raajanayik sanbandhon ki duration ke dauran, Maldives ne andamaan aur nikobaar dveepa group me organized bahupaksheey nausainik exercise 'milana' (Milan) me bhaaga lene ke India ke nimantran ko asveekaar kar diya tha. SLINEX ka full form shreelanka indiya nevala eksarasaaaj (Sri Lanka India Naval Exercise) hai. SLINEX-II 2011 me India aur shreelanka ki Navyon ke beech organized is joint bedde exercise ka doosra version tha. 'harimaoo power' (Harimau Shakti) ek niyमित dvipaksheey joint sainya prashikshan exercise hai jo India aur Malaysia ki Armyon ke beech jangal yuddha me visheshajnayata share karne ke liye organized kiya jata hai. [Q101–Q103]
- Joint sainya exercise 'aphreekaa-indiya pheeld trening eksarasaaaj (AFINDEX-2023)' ka doosra version Pune, Maharashtra me videshee prashikshan noda me organized kiya gaya tha. Statement 1 incorrect hai kyonki 'mitra power' India aur *shreelanka* (baanglaadesha nahi) ke beech ek joint sainya exercise hai. Sampreeti (SAMPRITI) exercise baanglaadesh ke saath hota hai. Dvipaksheey Japan-India oceaneey exercise (JIMEX-24) ke aathaven version ki mejabaanee Japan oceaneey aatma-defence bala dwara ki gayi aur ye June 2024 me Yokosuka, Japan me organized kiya gaya tha. [Q104–Q106]
- Sainya sahayog ko badhaava dene ke purpose se Indian Army aur kanbodiyan Army ke beech udghaatan joint tebala topa exercise (CINBAX) Maharashtra ke Pune me organized kiya gaya tha. Jodee (D) incorrect hai kyonki 'yuddhaabhyasa' India aur The United States of America (USA) ke beech ek major dvipaksheey joint sainya exercise hai, na ki Thailand. Thailand ke saath exercise ko 'maitree' kaha jata hai. [Q107–Q108]

✓ Source coverage: Q1–Q108
