

PHYSICS CH.6 — SOUND — FULL MIND MAP

Topic-wise · Fully Explained · Hinglish · SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Audible Range: Infrasonic & Ultrasonic
2. Sound Needs Medium: Solid, Liquid, Gas, Vacuum
3. Speed of Sound: Formula, Factors & Numericals
4. Sound Properties: Loudness, Pitch, Quality/Timbre
5. Echo & Reverberation
6. Reflection of Sound: Laws & Applications
7. SONAR & Ultrasound Applications
8. Musical Instruments & Sound Production
9. Noise Pollution & Hearing
10. Human Ear Structure
11. Vibrations, Frequency & Time Period
12. Doppler Effect
13. Beats & Resonance
14. Miscellaneous Sound Facts
15. ⚠ Traps / Master Formula Cheat Sheet (Q1059–Q1150)

1. Audible Range: Infrasonic & Ultrasonic

- Manushya ki audible range = 20 Hz se 20,000 Hz tak. [Q1059]
- Infrasonic = 20 Hz se kam frequency; earthquakes, thunder, volcanoes; hathi aur whale sun sakte hain. [Q1059]
- Ultrasonic = 20,000 Hz se zyada frequency; kutte, billi, moth, chuhe sun sakte hain. [Q1059]
- Frequency zyada → pitch zyada; frequency kam → pitch kam. [Q1067, Q1095, Q1101]
- Loudness amplitude par depend karti hai; shrillness frequency par depend karti hai. [Q1101, Q1110]
- Sound sensation human brain mein karib 0.1 sec tak persist karti hai (persistence of hearing) — isi wajah se echo sunne ke liye original sound aur reflected sound ke beech minimum 0.1 sec ka gap chahiye. [Q1132]

2. Sound Needs Medium: Solid, Liquid, Gas, Vacuum

- Sound ek mechanical wave hai → medium zaroori hai. [Q1060, Q1086, Q1090, Q1091, Q1094, Q1118]
- Sound vacuum mein travel nahi kar sakti. [Q1060, Q1086, Q1090]
- Sound solid, liquid, aur gas teeno mein travel kar sakti hai. [Q1060, Q1094]
- Sabse tez solid mein, phir liquid, sabse dheere gas mein. [Q1061, Q1082, Q1087, Q1093, Q1111]
 - Solid mein particles closest hote hain. [Q1087, Q1093]
- Speed: steel ≈ 5000 m/s, water ≈ 1500 m/s, air ≈ 330 m/s. [Q1061, Q1082, Q1087, Q1093, Q1111]
- Lightning pehle dikhti hai, thunder baad mein kyunki light >>> sound speed. [Q1068, Q1084, Q1112]
- Space mein astronauts radio use karte hain kyunki sound vacuum mein nahi jaati. [Q1090, Q1118]

3. Speed of Sound: Formula, Factors & Numericals

- Speed temperature par depend karti hai — summer mein sound speed winter se zyada hoti hai (temperature

zyada = speed zyada), season independent nahi hoti. [Q1062, Q1074, Q1080, Q1092, Q1099, Q1106, Q1117, Q1131]

- Formula: $v = f \times \lambda$ (frequency $\times$ wavelength). [Q1136, Q1137, Q1138, Q1139, Q1140, Q1141, Q1142, Q1143, Q1144, Q1145, Q1146, Q1147, Q1148, Q1149, Q1150]
- Formula: $v = 331 + (0.6 \times T^{\circ}\text{C})$ m/s. [Q1074, Q1092]
- 0°C par ≈ 331 m/s; 25°C par ≈ 346 m/s. [Q1062, Q1074, Q1106]
- Air pressure badhne par speed kam hoti hai (density zyada). [Q1080, Q1106]
- Humidity badhne par speed zyada hoti hai (water vapour halka hota hai). [Q1099, Q1117]
- Speed frequency par depend nahi karti hai. [Q1074, Q1092, Q1106]
- Same speed (v) constant rahe aur frequency badhe toh wavelength kam ho jaati hai ($v = f\lambda$, $\lambda \propto 1/f$). [Q1134]
- Water mein air se 4 times tez; steel mein air se 15 times tez. [Q1082, Q1111]
- Lightning-thunder time gap se distance: distance = speed $\times$ time $\approx 330 \times t$. [Q1068, Q1084, Q1112]
 - 3 sec gap $\rightarrow \approx 1$ km. [Q1068, Q1112]
- Time period 0.02 sec ho toh frequency = $1/0.02 = 50$ Hz. [Q1135]
- Frequency 200 Hz, wavelength 2 m ho toh speed = $200 \times 2 = 400$ m/s. [Q1136]
- Wavelength 0.50 m, frequency 1000 Hz ho toh speed = $1000 \times 0.50 = 500$ m/s. [Q1137]
- Wavelength 0.20 m, speed 400 m/s ho toh frequency = $400/0.20 = 2000$ Hz. [Q1138]
- Wavelength 2.0 cm = 0.02 m, speed 340 m/s ho toh frequency = $340/0.02 = 17000$ Hz = 17 kHz. [Q1139]
- Frequency 10 kHz = 10000 Hz, speed 340 m/s ho toh wavelength = $340/10000 = 0.034$ m = 3.4 cm. [Q1140]
- Wavelength 0.675 m, frequency 500 Hz ho toh speed = $500 \times 0.675 = 337.5$ m/s. [Q1141]
- Wavelength 0.85 m, frequency 400 Hz ho toh speed = $400 \times 0.85 = 340$ m/s. [Q1142]
- Speed 330 m/s, frequency 165 Hz ho toh wavelength = $330/165 = 2$ m. [Q1143]
- Speed 340 m/s, frequency 170 Hz ho toh wavelength = $340/170 = 2$ m. [Q1144]
- Speed 330 m/s, frequency 220 Hz ho toh wavelength = $330/220 = 1.5$ m. [Q1145]
- Speed 440 m/s, wavelength 1.1 m ho toh frequency = $440/1.1 = 400$ Hz. [Q1146]
- Speed 500 m/s, wavelength 2.5 m ho toh frequency = $500/2.5 = 200$ Hz. [Q1147]
- Speed 300 m/s, wavelength 1.5 m ho toh frequency = $300/1.5 = 200$ Hz. [Q1148]
- Frequency 200 Hz, speed 400 m/s ho toh wavelength = $400/200 = 2$ m. [Q1149]
- Frequency 250 Hz, speed 500 m/s ho toh wavelength = $500/250 = 2$ m. [Q1150]

4. Sound Properties: Loudness, Pitch, Quality/Timbre

- Loudness = amplitude par depend; unit = decibel (dB). [Q1067, Q1101, Q1110, Q1114]
 - 0 dB = hearing threshold; 120 dB = pain threshold. [Q1110]
- Pitch = frequency par depend, na ki timbre, amplitude ya intensity par. [Q1067, Q1095, Q1101, Q1110, Q1133]
 - Zyada frequency $\rightarrow$ zyada pitch (ladies/children). [Q1067, Q1095]
 - Kam frequency $\rightarrow$ kam pitch (males). [Q1067]
- Quality/Timbre = waveform par depend; same pitch/loudness wali alag instruments ki awaaz alag. [Q1101, Q1110]
- Sound graph: crest, trough, wavelength, amplitude. [Q1101, Q1110]

5. Echo & Reverberation

- Echo = reflected sound jo original se at least 0.1 sec baad mile (persistence of hearing ke barabar). [Q1063, Q1071, Q1088, Q1096, Q1102, Q1113, Q1124, Q1132]

- Minimum doori = 17.2 m (speed 344 m/s maan ke). [Q1071, Q1088, Q1096, Q1102, Q1113, Q1124]
 - Formula: $d = (v \times t)/2 = (344 \times 0.1)/2$. [Q1071, Q1132]
- Reverberation = repeated reflection (0.1 sec se kam gap). [Q1063, Q1076, Q1088, Q1102, Q1113, Q1120]
- Reverberation kam karne ke liye soft porous materials (curtains, cushions, carpets). [Q1076, Q1120]
- Echo se distance measure kar sakte hain (SONAR principle). [Q1063, Q1124]

6. Reflection of Sound: Laws & Applications

- 3 laws: incident ray = reflected ray angle; same plane; normal ke opposite sides. [Q1069, Q1081, Q1098, Q1105]
- Applications:
 - Megaphone/loudhailer → tube shape se focus. [Q1064, Q1078, Q1085, Q1103, Q1119, Q1126]
 - Hearing aid → weak sounds amplify. [Q1064, Q1078, Q1119]
 - Stethoscope → body sounds capture aur doctor tak. [Q1064, Q1078, Q1103, Q1119]
 - Sound boards → concave surfaces se audience tak focus. [Q1064, Q1085, Q1103, Q1126]
 - Whispering gallery → dome shape. [Q1085, Q1126]
- Concave surface se sound focus ho sakti hai. [Q1078, Q1103, Q1126]

7. SONAR & Ultrasound Applications

- SONAR = underwater objects detect karne ke liye ultrasonic waves. [Q1065, Q1072, Q1079, Q1097, Q1109, Q1123, Q1127, Q1130]
- Principle: pulse bhejo → reflect hokar wapas aaye → time se distance. [Q1065, Q1079, Q1109]
- Formula: Distance = (speed × time)/2. [Q1065, Q1072, Q1127]
- Applications: Submarine, sea depth, fish finding. [Q1065, Q1079, Q1109, Q1123, Q1130]
- Ultrasound applications:
 - Flaw detection (cracks). [Q1072, Q1097, Q1123, Q1127, Q1130]
 - Medical imaging/sonography. [Q1072, Q1097, Q1123, Q1130]
 - Cleaning delicate parts. [Q1072, Q1097, Q1130]
 - Breaking kidney stones (lithotripsy). [Q1072, Q1097]
- Bat aur dolphin ultrasound use karte hain navigation ke liye. [Q1079, Q1109]
- SONAR frequency range = 20 kHz se 100 kHz. [Q1130]

8. Musical Instruments & Sound Production

- Sound vibration se produce hoti hai. [Q1066, Q1089, Q1094, Q1107, Q1115, Q1121, Q1128]
- String instruments (guitar, sitar, violin): string vibrate karti hai. [Q1066, Q1089, Q1107, Q1115]
 - Length kam → frequency zyada → pitch zyada. [Q1066, Q1107]
 - Tension zyada → frequency zyada. [Q1066, Q1115]
 - String patli → frequency zyada. [Q1066]
- Wind instruments (flute, trumpet): air column vibrate karti hai. [Q1089, Q1107, Q1121]
 - Air column lamba → pitch kam; chhota → pitch zyada. [Q1089, Q1121]
- Percussion instruments (tabla, drum): membrane vibrate karti hai. [Q1107, Q1128]

- Jaltarang: kam paani → zyada pitch. [Q1121]
- Sitar mein sympathetic strings resonance se sound amplify karti hain. [Q1115]

9. Noise Pollution & Hearing

- Noise = unwanted sound. [Q1073, Q1104, Q1116, Q1122, Q1129]
- Sources: vehicles, machines, loudspeakers, crackers, aircraft. [Q1073, Q1104, Q1116, Q1122]
- Effects: hearing loss, stress, high BP, sleep disturbance. [Q1073, Q1104, Q1122, Q1129]
- Control:
 - Source pe: silencers, maintenance. [Q1073, Q1104, Q1116]
 - Path mein: soundproof walls, barriers, trees. [Q1073, Q1116]
 - Receiver pe: earmuffs, earplugs. [Q1073, Q1104, Q1116]
- Decibel (dB) = sound level unit.
 - 0 dB = threshold; normal conversation ≈ 60 dB; heavy traffic ≈ 70-80 dB; jet ≈ 150 dB. [Q1073, Q1110]
- Prolonged exposure 85 dB se zyada se hearing damage. [Q1116]
- Forests/trees noise absorb karte hain. [Q1129]

10. Human Ear Structure

- 3 parts: Outer ear, Middle ear, Inner ear. [Q1075, Q1083, Q1100, Q1108, Q1114]
- Outer: Pinna + Ear canal. [Q1075, Q1083, Q1100, Q1108]
- Middle: Eardrum + 3 bones (hammer, anvil, stirrup). [Q1075, Q1083, Q1100, Q1108, Q1114]
- Inner: Cochlea (hair cells → electrical signals) + Auditory nerve. [Q1075, Q1083, Q1100, Q1108, Q1114]
- Eardrum: sound → mechanical vibrations. [Q1075, Q1100]
- Cochlea: vibrations → electrical signals. [Q1075, Q1100]
- Ear balance bhi maintain karti hai. [Q1108]

11. Vibrations, Frequency & Time Period

- Frequency (f) = vibrations per second; unit = Hertz (Hz). [Q1066, Q1089, Q1094, Q1095, Q1107, Q1115, Q1121, Q1135]
- Time period (T) = 1/f; ek vibration ka time. [Q1094, Q1121, Q1135]
- Vibration stop → sound stop. [Q1089]
- Sound ke liye vibrating body zaroori. [Q1094, Q1121, Q1128]
- Stretched string: $f \propto 1/L$, $f \propto \sqrt{T}$, $f \propto 1/\sqrt{\mu}$. [Q1066, Q1107, Q1115]

12. Doppler Effect

- Source/observer move karne par apparent frequency change hoti hai. [Q1070, Q1077, Q1096, Q1102, Q1112, Q1125]
- Source toward aaye → frequency zyada (blue shift). [Q1070, Q1096, Q1125]
- Source away jaaye → frequency kam (red shift). [Q1070, Q1096, Q1125]
- Applications: train whistle, police siren, astronomy (red/blue shift), RADAR, SONAR. [Q1070, Q1077, Q1096, Q1102,

13. Beats & Resonance

- Beats: Do frequencies interfere → loudness periodic variation; beat freq = $|f_1 - f_2|$. [Q1113, Q1124]
- Resonance: external freq = natural freq → vibrations zyada → sound amplify. [Q1115]
- Sitar sympathetic strings resonance se amplify hoti hain. [Q1115]
- Soldiers bridge par march nahi karte (resonance se collapse). [Q1115]

14. Miscellaneous Sound Facts

- Bell jar experiment: vacuum mein sound kam hoti hai → medium zaroori. [Q1090, Q1118]
- Sound longitudinal wave hai; light transverse hai. [Q1091, Q1118]
- Sound speed temperature par depend karti hai. [Q1080, Q1092, Q1099, Q1106, Q1117]
- Sound speed frequency par depend nahi. [Q1074, Q1092, Q1106]
- Supersonic = speed > sound; Mach > 1; Sonic boom. [Q1125]
- Lightning pehle dikhti hai kyunki light >>> sound. [Q1068, Q1084, Q1112]

15. ⚠ Traps / Master Formula Cheat Sheet (Q1059–Q1150)

- ⚠ Trap: Audible range = 20 Hz – 20,000 Hz. [Q1059]
- ⚠ Trap: Sound vacuum mein nahi jaati. [Q1060, Q1086, Q1090]
- ⚠ Trap: Speed: solid > liquid > gas. [Q1061, Q1087, Q1093]
- ⚠ Trap: Speed temperature par depend karti hai — summer mein winter se zyada, seasons independent nahi. [Q1062, Q1074, Q1099, Q1117, Q1131]
- ⚠ Trap: Speed frequency par depend nahi. [Q1074, Q1092, Q1106]
- ⚠ Trap: Echo ke liye minimum 0.1 sec aur 17.2 m. [Q1063, Q1071, Q1124, Q1132]
- ⚠ Trap: Loudness = amplitude; Pitch = frequency (timbre/amplitude/intensity nahi); Quality = waveform. [Q1067, Q1101, Q1110, Q1133]
- ⚠ Trap: SONAR = ultrasound; distance = $(v \times t)/2$. [Q1065, Q1072, Q1127]
- ⚠ Trap: Doppler: toward → freq zyada; away → freq kam. [Q1070, Q1096, Q1125]
- ⚠ Trap: Ear ke 3 parts = outer, middle, inner. [Q1075, Q1083, Q1100]
- ⚠ Trap: 0 dB = hearing threshold; 120 dB = pain threshold. [Q1110]
- ⚠ Trap: Sound waves longitudinal; light transverse. [Q1091, Q1118]
- ⚠ Trap: Numerical mein wavelength hamesha meters mein convert karo (cm → m divide by 100). [Q1139, Q1140]
- ⚠ Trap: $v = f\lambda$ hamesha use hota hai; frequency badhe (v constant) toh wavelength kam hoti hai, units check karo. [Q1134, Q1136, Q1137, Q1138, Q1139, Q1140, Q1141, Q1142, Q1143, Q1144, Q1145, Q1146, Q1147, Q1148, Q1149, Q1150]
- ⚠ Trap: Frequency = $1/T$; time period ka reciprocal. [Q1135]
- ⚠ Trap: kHz → Hz multiply by 1000; Hz → kHz divide by 1000. [Q1139, Q1140]
- ⚠ Trap: Lightning-thunder distance $\approx 330 \times$ time gap meters. [Q1068, Q1084, Q1112]
