

ECOLOGICAL FOOTPRINT AND MILLENNIUM ECOSYSTEM ASSESSMENT - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Ecological Footprint
2. Social Cost of Carbon
3. Millennium Ecosystem Assessment - Ecosystem Services

1. Ecological Footprint

- Global hectares - ecological padachihn Earth ke ecosystems par human demand ka measure hai. yeh natural resources ki demand ka ek manakikrit measure hai, jisaki comparison grah ki ecological regeneration capacity se ki ja sakti hai. [Q1]
- Ecological footprint - ecological padachihn Earth ke ecosystems par human demand ka measure hai. yeh natural resources ki demand ka ek manakikrit measure hai, jisaki comparison grah ki ecological regeneration capacity se ki ja sakti hai. [Q2]

2. Social Cost of Carbon

- carbon ki samajik lagat (Social Cost of Carbon - SCC) kisi fixed year mein ek extra mitrik tan carbon dioxide released karne se hone wali shuddh economic damage ka maudrik anuman hai. ise ek tan CO₂ emissions se bachane par samaj ko milane wale labh ke roop mein bhi samajha ja sakta hai. [Q3]

3. Millennium Ecosystem Assessment - Ecosystem Services

- Nutrient cycling and crop pollination - sahasrabdi ecosystem akalan ke ke mutabik, sahayak sevaen ve hain jo dusre sabhi ecosystem services ke production ke liye zaroori hain, jaise nutrient chakran aur phasal paragana. pravadhanakari services mein food aur water ka production shamil hai; niyamak services mein climate aur rog control shamil hai; aur sanskritik services mein manoranjak v adhyatmik labh shamil hain. [Q4]
