

ECOSYSTEM SOME FACTS FOR EXAM - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Eco-friendly Trees & Environmental Hazards
2. Lentic, Lotic & Ecotone Concepts
3. Stable Ecosystem & Productivity
4. Deep Ecology, Monoclimax & Ecological Niche
5. Environment Acts - Matching Trap
6. Green GDP & Water Density Gradient
7. Marine Upwelling & Productivity
8. Eco-Sensitive Zones
9. Ecosystem Interdependence - Assertion/Reason
10. Human-made Biome
11. Coral Reef Distribution & Diversity

1. Eco-friendly Trees & Environmental Hazards

- Galat kathan: Eucalyptus; yukeliptas ko Indian pariksha material mein environment-friendly nahi mana jata, kyunki yeh dusre trees ki comparison mein zyada groundwater ka use karta hai, jisse ghane ropan wale areas mein groundwater level aksar ghat jata hai. isi reason yukeliptas ko kabhi-kabhi is context mein 'environment ka shatru' kaha jata hai. [Q1]
- Galat kathan: Eucalyptus; yukeliptas ko Indian pariksha material mein environment-friendly nahi mana jata, kyunki yeh dusre trees ki comparison mein zyada groundwater ka use karta hai, jisse ghane ropan wale areas mein groundwater level aksar ghat jata hai. [Q2]
- Eucalyptus - yukeliptas ko Indian pariksha material mein ek environmental roop se samasyagrast tree mana jata hai, kyunki iski uchch water-khapat aur asapas ki vegetation par elilopaithik effect local biodiversity aur groundwater level ko ghata sakte hain. [Q3]

2. Lentic, Lotic & Ecotone Concepts

- Ponds and swamps - stable-aquatic ecosystem woh mithe water ka system hai jismein water stable rehta hai, jaise lake ya talaba. iske viparit pravahi-aquatic ecosystem mein water bahata rehta hai, jaise river ya dhara. [Q4]
- ecological sankraman area (Ecotone) woh area hai jahan do samipavarti biotic community ya ecosystem milate aur aapas mein interaction karte hain. ismein dono nikatavarti communities ki species aur sankraman area ki specific species bhi payi ja sakti hain. [Q5]
- ecological sankraman area (Ecotone) woh area hai jahan do samipavarti biotic community ya ecosystem milate aur aapas mein interaction karte hain. ismein dono nikatavarti communities ki species aur sankraman area ki specific species bhi payi ja sakti hain. [Q6]
- ecological sankraman area (Ecotone) woh area hai jahan do samipavarti biotic community ya ecosystem milate aur aapas mein interaction karte hain. ismein dono nikatavarti communities ki species aur sankraman area ki specific species bhi payi ja sakti hain. [Q7]

- Rivers - pravahi-aquatic ecosystem ve mithe water ke system hain jinmein water lagatar bahata rehta hai. nadiyan aur dharaen inke common udaharan hain, jabki talab aur zyadatar jhilen stable-aquatic system hain. [Q8]

3. Stable Ecosystem & Productivity

- traditional pratiyogi-pariksha context mein mahasagariy/marine ecosystem ko tulanatmak roop se zyada stable mana jata hai, kyunki large jalarashi tej physical parivartanon ko kam karti hai. iska meaning yeh nahi hai ki ocean aparivartit ya vyavadhan se free hain; tapan, amlikaran, oxygen ki kami, pollution aur ati-dohan marine ecosystems ko kaphi badal sakte hain. [Q9]
- traditional pratiyogi-pariksha context mein mahasagariy/marine ecosystem ko tulanatmak roop se zyada stable mana jata hai, kyunki large jalarashi tej physical parivartanon ko kam karti hai. iska meaning yeh nahi hai ki ocean aparivartit ya vyavadhan se free hain; tapan, amlikaran, oxygen ki kami, pollution aur ati-dohan marine ecosystems ko kaphi badal sakte hain. [Q10]
- Mangroves, grasslands, lakes, oceans - ghatati utpadakata ke kram mein ecosystems ka sahi kram hai-mangrove, ghasabhumian, jhilen, mahasagara. [Q11]

4. Deep Ecology, Monoclimax & Ecological Niche

- Arne Naess - Norway ke darshanik arne nes ne 1970 ke dashak ke praranbh mein 'gahan Ecology (gahara Ecology)' term prastut kiya. gahan Ecology manavetar life ke antarnihit value aur nature ke saath human relations mein gahare change par bal deti hai. [Q12]
- eph.i. klements (F.E. Clements) - eph. i. klements ecological anukraman ke ekal-charam siddhant (ekal charam siddhant) se jude hain. is siddhant ke ke mutabik kisi climate area mein anukraman ek main jalavayaviy charam community ki taraf badhata hai; baad ke ecological adhyayanon ne anek niyantranon aur anek sanbhavit stable avasthaon ko bhi recognition di. [Q13]
- Grinnell - joseph grinell un praranbhik paristhitikividon mein the jinhonne kisi species ke vitaran ko specified karne wali environmental aur avasiy avashyakataon ke basis par ecological niket (Ecological Niche) ki avadharana developed ki. baad mein eltan aur hachinsan sahit dusre paristhitikividon ne niket ki avadharana ko kriyatmak aur bahuayami ke roop mein vistrit kiya. [Q14]
- ecological niket kisi ecosystem ke andar kisi species ki condition ke liye used term hai, jo species ke astitv ke liye zaroori paristhitiyon ki limit aur ecosystem mein usaki ecological bhumika dono ka varnan karta hai. ecological niket species aur biotic aur abiotic environment ke beech sabhi interactions ko samahit karta hai. [Q15]
- jab resources aparyapt hote hain, to ecological niket mein species ki number kam hone ki pravritti hoti hai. resources simit hone par food, place aur dusre avashyakataon tak pahunch ke liye species ke beech zyada pratispardha hoti hai. isse us niket mein living rahane aur phalane-phulane wali species ki number simit ho sakti hai. dusari taraf, agar resources prachur hon, to zyada species sah-astitv mein rah sakti hain kyunki strong pratispardha ke bina sabhi ke living rahane ke liye paryapt resources hote hain. [Q16]

5. Environment Acts - Matching Trap

EXAM TRAP wildlife (conservation) Act 1972 mein enacted hua. Environment (Protection) Act 1986 mein enacted hua. anusuchit janajati aur dusre paranparagat forest nivasi (forest adhikaron ki recognition) Act 2006 mein aur forest (conservation) Act 1980 mein enacted hua. [Q17]

6. Green GDP & Water Density Gradient

- First - Chhattisgarh ko forest ecosystem services ke mulyankan ko green sakal gharelu products (green sakal gharelu products (green GDP)) ki framework se jodane wala India ka pehla state bataya gaya hai. is approach ka purpose traditional economic production ke saath carbon bhandaran, biodiversity, soil aur water conservation jaise environmental yogadanon ko bhi recognition dena hai. [Q18]
- ghanatv-pravan parat (Pycnocline) water nikay ki woh parat hai jahan gaharai ke saath ghanatv teji se badalata hai; isliye yeh ghanatv pravanata ko darshati hai. lavanata-pravan parat (Halocline) mein lavanata aur tap-pravan parat (Thermocline) mein temperature teji se badalata hai. [Q19]

7. Marine Upwelling & Productivity

- marine urdhvappravah (Upwelling) tab hota hai jab gahara water upar ki taraf uthata hai, aam taur par isliye ki pavanen satahi water ko kisi area se dur dhakel deti hain. gahara water dubate organic substance ke vighatan se dobara available hue nutrient tattvon se rich hota hai, isliye urdhvappravah inhen suryaprakash wali satahi parat tak pahunchata hai. yeh nutrient apurti padapaplavak production ko badhati hai aur bahut zyada producer matsy areas ko sahara deti hai. urdhvappravah ka mukhya work decomposer microbes ya tal-nivasi organisms ko surface par lana nahi hai; isliye sirf statement 2 sahi hai. [Q20]

8. Eco-Sensitive Zones

- Galat kathan: Neither 1 nor 2; protected areas ke asapas Ecology-sanvedanashil area (environment-sanvedanashil area - ESZ) Environment (Protection) Act, 1986 aur uske niyamon ke tahat adhisuchit kiye jate hain, wildlife (conservation) Act, 1972 ke tahat nahi; isliye statement 1 galat hai. ESZ adhisuchanaen agriculture ko chhodakar har ek human activity par complete pratibandh nahi lagatin. activities ko aam taur par nishiddh, viniyamt aur anumata shreniyon mein rakha jata hai aur satik list related adhisuchana ke ke mutabik badal sakti hai. local communities ki chal rahi agriculture aur dusre sangat gatividhiyan applied adhisuchana aur viniyaman ke adhin jari rah sakti hain. [Q21]

9. Ecosystem Interdependence - Assertion/Reason

- Galat kathan: (A) is false, but (R) is true.; ecosystem ke sabhi organism ek-dusare par dependent hote hain. agar kisi ek organism ki population badhti ya ghatati hai, to isse baaki ecosystem prabhavit ho sakta hai. agar upar ki food chain mein lomadiyon ko mar diya jae, to kharagoshon ki population badh jaegi kyunki ve ab lomadiyon ka shikar nahi honge. isliye statement A galat hai. manushy kai tarikon se physical environment ko prabhavit karte hain: atijanasankhya, pollution, fossil indhanon ka burning aur forests ki katai. in jaise parivartanon ne climate change, soil aparadan, kharab air quality aur pine yogy na rahane wale water ko janm diya hai. isliye R sahi hai. [Q22]

10. Human-made Biome

- Crop land - phasal land human-nirmit bayom ka ek udaharan hai. [Q23]

11. Coral Reef Distribution & Diversity

- 1, 2 and 3 - zyadatar riph-nirmata coral garam, uthale tropical aur uposhnakatibandhiy samudron mein paye jate hain; isliye abhipret meaning mein statement 1 sahi hai. ostreliya, indoneshiya aur philipins milakar world ke coral-bhitti area ka bahut bada hissa rakhate hain, jo is standard sawal mein used ankadon ke ke mutabik ek-tihai se zyada hai; isliye statement 2 sahi mana jata hai. coral-bhittiyon mein animal diversity bahut widespread hai; 34 many animal sanghon mein se 32 ke pratinidhi coral-bhittiyon par darj kiye gaye hain, jo tropical varshavanon ki comparison mein kahin zyada hai; isliye statement 3 sahi hai. [Q24]
