

THE KYOTO PROTOCOL AND OTHER PROTOCOL - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Kyoto Protocol - Purpose, Adoption & Entry into Force
2. Clean Development Mechanism - CDM
3. Greenhouse Gas Protocol
4. CDM, Carbon Credits & Kyoto Mechanisms
5. Common Carbon Metric & Blue Carbon
6. Protocols - Kyoto, Cartagena & Related Terms
7. Carbon Footprint & Carbon Credits
8. BioCarbon Fund & Forest Carbon Partnership Facility
9. Global Climate Change Alliance
10. Carbon Tax
11. Deep Carbon Observatory
12. Climate Action Tracker
13. The Climate Group & IEA Partnership

1. Kyoto Protocol - Purpose, Adoption & Entry into Force

- Kyoto Protocol, climate change par United Nations framework Convention se juda ek international agreement hai, jo international roop se badhyakari emissions-kami target specified karke apne pakshakaron ko pratibaddh karta hai. [Q1]
- Kyoto Protocol, climate change par United Nations framework Convention se juda ek international agreement hai, jo international roop se badhyakari emissions-kami target specified karke apne pakshakaron ko pratibaddh karta hai. [Q2]
- Kyoto Protocol ko Kyoto mein 11 December, 1997 ko apnaya gaya aur yeh 16 February, 2005 ko effective hua. isliye statement (1) sahi hai. Kyoto Protocol, climate change par United Nations framework Convention se juda ek international agreement hai. isliye statement (2) galat hai. kisi gas ki global warming capacity (GWP) us gas ke paramanuon ki dakshata aur uske environmental life-cycle par dependent karti hai. carbon dioxide ka environmental life-cycle parivartanashil hai, jabki usaki global warming capacity stable rahati hai (GWP = 1). pichhale bis varshon mein methane ki global warming capacity 81.2 dekhi gai. isliye greenhouse gas ke roop mein methane carbon dioxide se zyada khataranak aur effective hai. [Q3]
- Galat kathan: Kyoto Protocol Save water; bio-protection par kartajena Protocol adhunik bio-technology se paida living convert organisms ke surakshit use, hastantaran aur management se related hai. stokahom Convention sthayi organic pollutants (POPs) se related hai. [Q4]
- year 1997 mein world environment conference Kyoto, japan mein organized hua tha. isi conference mein climate change par United Nations framework Convention ke Kyoto Protocol ko apnaya gaya, jo 16 February, 2005 ko effective hua. [Q5]

2. Clean Development Mechanism - CDM

- clean development system (CDM), Kyoto Protocol mein define lachile system mein se ek hai, jo emissions kami pariyojanaen ki vyavastha karta hai. CDM Protocol ke “project-based” (Project-Based) tantron mein se ek hai aur ise developed countries dwara developing countries mein aisi pariyojanaon ko badhava dene ke liye banaya gaya hai jo emissions kam karti hain. isse developed countries ko carbon kredit obtained karne mein help mil sakti hai. isliye statement (d) galat hai. [Q6]

3. Greenhouse Gas Protocol

- greenhouse gas Protocol (GHG Protocol), government aur vyaparik netaon dwara greenhouse gas emissions ko samajhane, mapane aur prabandhit karne ke liye sabse widespread roop se used international lekhankan sadhan hai. world resources institute (WRI) aur world vyavasay parishad ke liye sustainable development ke beech ek dashak lanbe cooperation ke roop mein GHG Protocol world bhar ke vyavasayon, sarakaron aur environment samuhon ke saath climate change se nipatane ke liye vishvasaniy aur effective karyakramon ki nayi pidhi banane par kam kar raha hai. isliye (a) sahi jawab hai. [Q7]
- (i) and (ii) - climate change par United Nations framework Convention ke tahat ek international agreement Kyoto Protocol, 11 December, 1997 ko Kyoto, japan mein apnaya gaya tha. Kyoto Protocol 16 February, 2005 ko effective hua. ise 1990 ke level tak greenhouse gas emissions kam karne ke liye badhyakari samajhaute ke roop mein apnaya gaya tha. ismein 5.2% kami ka pravadhan tha. methane, CO2 ki comparison mein greenhouse gas ke roop mein lagbhag 86 guna zyada shaktishali hai. [Q8]

4. CDM, Carbon Credits & Kyoto Mechanisms

- Clean Development Mechanism - carbon vyapar, carbon dioxide (CO2) pollution ko niyantrit karne ka ek approach hai, jismein emissions mein kami obtained karne ke liye economic protsahan diye jate hain. CO2 emissions aur global warming ke context mein clean development system (CDM), UNFCCC ke tahat ek bajar-prerit system hai jo developing countries ko greenhouse gas emissions kam karne wali behatar takanik apanane ke liye developed countries se dhan ya protsahan obtained karne ki anumati deta hai. [Q9]
- Kyoto Protocol ke anuchchhed 12 mein define clean development system (CDM), Kyoto Protocol ke tahat emissions katauti ya emissions limit ki pratibaddhata wale country (anulagnak B pakshakar) ko developing countries mein emissions katauti project applied karne ki anumati deta hai. aisi pariyojanaen vikrey (saleable) pramanit emissions katauti (CER) kredit arjit kar sakti hain, jinmein har ek ek tan CO2 ke barabar hota hai aur jinhe Kyoto target pura karne mein gina ja sakta hai. CDM ke do purpose the: (1) anulagnak I mein shamil na kiye gaye pakshon ko sustainable development obtained karne aur climate change par United Nations framework Convention (UNFCCC) ke antim purpose - khataranak climate change ko rokana - mein contribution dene mein help karna; aur (2) anulagnak I mein shamil pakshon ko unke quantified emissions limit aur kami commitments (greenhouse gas (GHG) emissions caps) ke anupalan mein help karana. “anulagnak I” paksh sandhi ke anulagnak I mein listed audyogikrit country hain. Non-Annex I paksh developing country hain. isliye clean development system ke tahat pariyojanaen 'anulagnak I' aur 'non-Annex-1' dono countries se related hoti hain. [Q10]

5. Common Carbon Metric & Blue Carbon

- sajha carbon mapadand, bhavan sanchalan se energy use ko mapane aur greenhouse gas emissions ki prativedan ke liye hai. world bhar ke agrani visheshajnyon ne widespread international cooperation ke medium se kisi bhavan ke carbon padachihn ko mapane ki universal vidhi developed ki hai. [Q11]
- Carbon captured by oceans and coastal ecosystems - nila carbon woh term hai jo world ke mahasagaron aur coastal ecological tantron dwara absorbed carbon ke liye used hota hai. hamare taton ke saath marine ghas, mangrove aur lavaniy daladal (Salt Marshes) carbon ko “pakadakar rakhate” hain aur carbon sink ki tarah work karte hain. [Q12]

6. Protocols - Kyoto, Cartagena & Related Terms

- anulagnak-I countries ne pratham Kyoto Protocol mein hissa liya. anulagnak-I countries aur EU ne dusare daur ke Kyoto target par sahamati vyakt ki. pramanit emissions katauti (CER) emissions ikai (ya carbon kredit) ka ek type hai, jise clean development system (CDM) karyakari bord dwara CDM pariyojanaen se obtained aur Kyoto Protocol ke niyamon ke tahat DOE (Designated Operational Entity) dwara satyapit emissions katauti ke liye jari kiya jata hai. kartajena Protocol, biodiversity Convention (CBD) ka ek purak Protocol hai. yeh bio-technology (biotechnology) apanane se paida sajiv rupantarit organisms (Live Modified Organisms-LMO) se biodiversity ki protection ke liye pratibaddh hai. [Q13]
- Bio-safety agreement - kartajena Protocol bio-protection (bio-safety) par ek international agreement hai. ise 29 January 2000 ko apnaya gaya aur 11 September 2003 ko applied kiya gaya. [Q14]

7. Carbon Footprint & Carbon Credits

- Carbon footprint - human activities ko direct ya apratyaksh roop se samarthan dene ke liye utpadit greenhouse gases ki total amount ko carbon padachihn kaha jata hai. [Q15]
- Kyoto Protocol ne greenhouse gas emissions ki sabse zyada amount par simaen specified kin. in countries ne local vyavasayon aur dusre sangathanon dwara operated pratishthanon se emissions par antarik kota specified kiye, jinhe common roop se 'sanchalak' (Operators) kaha jata hai. country apni national 'panjikaon' (Registries) ke medium se is jimmedari ki monitoring karte hain, jinaka UNFCCC dwara anupalan ke liye satyapan (Validation) aur monitoring zaroori hai. har ek sanchalak ko kredit ka bhatta (Allowance) diya jata hai. har ek ikai svami ko ek mitrik (Metric) tan CO₂ released karne ka adhikar deti hai. [Q16]
- 'carbon kredit' ki avadharana Kyoto Protocol se paida hui. carbon kredit ek anumatipatr hai jo use rakhne wali kanpani ko ek fixed amount mein carbon dioxide ya dusre greenhouse gases released karne ki anumati deta hai. [Q17]

8. BioCarbon Fund & Forest Carbon Partnership Facility

- World Bank - bio carbon kosha (BioCarbon Fund) - sustainable forest paridrishyon ke liye initiative (ISFL) ek bahupakshiy nidhi hai, jise danadata sarakaron (Donor Governments) ka samarthan obtained hai aur world bank iska management karta hai. Norway ne is kosha ke liye sabse zyada \$135 das lakh, yunited kingadam (UK) ne \$120 das lakh aur sanyukt state amerika (USA) ne \$25 das lakh ki pratibaddhata jatai hai. [Q18]
- forest carbon bhagidari suvidha (FCPF) world bank ka ek program hai, jise 2008 mein established kiya gaya tha aur ismein tatparata kosha (Readiness Fund) aur carbon kosha shamil hain. FCPF ko developing countries ko vanonmulan (deforestation) aur forest decomposition se emissions kam karne, forest carbon bhandar (stocks) ko badhane aur protected karne aur forest ka sustainable management (REDD+) karne mein help dene ke liye banaya gaya, taaki khade forest (standing forest) ko value provide kiya ja sake. isliye statement 2 galat hai kyunki yeh vishvavidyalayon, vyaktiyon ya sansthanon ko dhan (funds) provide nahi karata. [Q19]

9. Global Climate Change Alliance

- GCCA ko yuropiy union (EU) ne 2007 mein developing countries - visheshakar alpavikasit countries (LDCs) aur chhote dvipiy developing countries (SIDS) - ke saath sanvad aur cooperation majabut karne ke liye established kiya tha. isne sirf char countries mein work shuru kiya. aaj iska bajat bahut bada hai aur yeh world ki main climate initiatives mein se ek hai. yeh do aapas mein kriyashil majabut stanbhon ke medium se apna target pura karta hai. inmein lakshit developing countries ko climate change ko apni development nitiyan aur bajat mein ekikrit karne ke liye takaniki aur vittiy help dena shamil hai. [Q20]

10. Carbon Tax

- New Zealand - nyuzilaind ko aksar us pehle country ke roop mein uddhrit kiya jata hai jisane global warming se nipatane ke liye khas roop se apne nagarikon ke carbon emissions ko lakshit karte hue ek emissions vyapar scheme (Emissions Trading Scheme) aupacharik roop se prastavit ki. Sweden, phinalaind, nidaralaind aur Norway ne nyuzilaind se pehle hi carbon kar applied kar diye the, parantu diye gaye char options mein se nyuzilaind hi is specific sawal ka standard jawab hai. [Q21]
- Singapore - singapur government ne February 2018 mein announcement ki ki woh Paris climate agreement ke tahat apni pratibaddhataon ke hissa ke roop mein greenhouse gas emissions kam karne ke liye carbon kar lagaegi. [Q22]

11. Deep Carbon Observatory

- dip carbon objarvetari (DCO) 1000 se zyada vaijnnyanikon ka global community hai, jo Earth mein carbon ki amount, speed, roop aur utpatti ko samajhane ke liye das-varshiy khoj mein laga tha. 2009-2019 ke dauran DCO science ko nimn char widespread vishay-based (theme-based) communities mein vargikrit kiya gaya tha: charam (Extreme) bhautiki aur rasayaniki - Earth aur dusre grahon ke gahare antarik bhagon jaisi charam paristhitiyon mein carbon ke physical aur chemical vyavahar (behaviour) ki samajh sudharane ke liye samarpita. Reservoirs aur Fluxes - gahara carbon reservoirs ki pahachan, in reservoirs ke beech carbon ke movement ka nirdharan aur Earth ke total carbon bajat ke akalan ke liye samarpita. gahara energy - bhuvaijnnyanik samay mein bhuparpati aur mantle mein abiogenic hydrocarbons aur dusre biotic species ki amount aur daron ko samajhane ke liye samarpita. gahara life - gahara sukshmajivi aur viral jaivamandal ki nature aur expansion ka akalan karne ke liye samarpita. [Q23]

12. Climate Action Tracker

- Database created by coalition of research organisations - climate action anusaranakarta ek svatantr (independent) scientific vishleshan hai, jo sarakaron ki climate action par nazar rakhata hai (track) aur use Paris agreement ke world level par sahamat target - "tapan ko 2°C se kaphi neeche rakhana aur 1.5°C tak simit karne ke prayas karna" - ke viruddh mapata hai. klaimet enalitiks (Climate Analytics) aur nyu klaimet instityut (New Climate Institute) namak do sangathanon ke cooperation ke roop mein CAT 2009 se policy-nirmataon (policymakers) ko yeh svatantr vishleshan available kara raha hai. [Q24]

13. The Climate Group & IEA Partnership

- 1, 3 and 4 only - climate group ek international non-labhakari organization hai, jisaki establishment 2003 mein hui aur jiske karyalay landan, nayi Delhi, emsatardam, bijing aur nyuyork mein hain. yeh vyavasayon aur sarakaron (governments) ke shaktishali netavark ko ek saath lata hai, jo climate action ko tej karne ke target ki disha mein global bajar aur nitiyan ko badalate hain. EP100 international non-labhakari climate group ke netritv wali global initiative hai, jo 120 se zyada energy-daksh (energy-smart) vyavasayon ko saath lati hai, jo energy dakshata mein sudhar (improvements) ko mapane aur report karne ke liye pratibaddh hain. dalmiya siment, godarej end boyas, JSW siment, mahindra end mahindra, mahindra haivi injans, svaraj injans aur altratek siment jaisi Indian kanpaniyan EP100 ki sadasy hain. 'andar 2 gathabandhan' (Under 2 Coalition) states, pradeshon, pranton aur dusre up-national sarakaron (subnational governments) ka sabse bada global netavark hai, jo sabse zyada 2050 tak nival shuny (net zero) emissions obtained karne ke liye pratibaddh hai. [Q25]
