

MEASURES FOR THE PRESERVATION OF THE OZONE LAYER - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Major Ozone-Depleting Substances
2. Ozone-Rich Halo over Tibetan Plateau
3. Montreal Protocol - Core Purpose
4. World Ozone Day - 16 September
5. Agreement / Protocol Matching

1. Major Ozone-Depleting Substances

- 1, 2 and 3 - chlorofluorocarbon (CFCs), hailon (Halons) aur carbon tetrakloraid sabhi ozone-depleting substance hain jinhe montriyaal Protocol vyavastha ke tahat niyantrit kiya gaya hai. Protocol sabhi substances aur upayogon par ek saman tatkal complete pratibandh ke bajay charanabaddh samapti aur control anusuchiyon ka use karta hai. [Q1]

2. Ozone-Rich Halo over Tibetan Plateau

- ji.dablyu. kent mur (G.W. Kent Moore) - 2005 mein bhubhautikiy research patr mein prakashit G. W. K. Moore aur John L. Semple ke study ne tibbati pathar aur himalay ke charon taraf zyada total-stanbhiy ozone wale 'helo' ki report di. is study ke main lekhak ji.dablyu.ke. mur (G. W. K. Moore) the. [Q2]

3. Montreal Protocol - Core Purpose

- 'ozone layer ko damage pahunchane wale substances par montriyaal Protocol' (Montreal Protocol on Substances that Deplete the Ozone Layer) ko 1987 mein apnaya gaya aur yeh 1 January 1989 ko effect mein aya. iska purpose ozone-depleting substances ke production aur consumption ko niyantrit aur charanabaddh samapt karke ozone layer ki protection karna hai. [Q3]
- To protect the Ozone layer depletion - montriyaal Protocol global agreement hai jise khas roop se ozone-depleting substances ko niyantrit kar stratospheric ozone layer ki protection ke liye banaya gaya hai. ise 1987 mein apnaya gaya aur 1989 mein applied kiya gaya. [Q4]
- chlorofluorocarbon (CFCs) montriyaal Protocol ke tahat niyantrit main ozone-depleting substances mein shamil hain. carbon dioxide greenhouse gas hai, lekin stratospheric ozone-kshay ka main chemical reason nahi hai. [Q5]
- Galat kathan: Carbon Trade - Montreal Protocol; pratham world climate conference 1979 mein hua, Earth shikhar conference +5 1997 mein hua aur ejenda 21, 1992 ke riyo Earth shikhar conference (Rio Earth Summit) ka main result tha. carbon vyapar climate-policy tantron, visheshakar Kyoto dhanche se developed vyavasthaon se juda hai; yeh montriyaal Protocol ke ozone-depleting substance control ka vishay nahi hai. [Q6]

4. World Ozone Day - 16 September

- United Nations mahasabha ne 16 September ko ozone layer conservation ke liye international day declared kiya; yeh 1987 mein montriyaal Protocol par hastakshar ki date ki smriti mein manaya jata hai. 2026 ka ayojan “shital grah ke liye global action” par kendrit hai aur kigali sanshodhan ko apanae jane ke das year pure hone ko bhi rekhankit karta hai. [Q7]
- 16th September - United Nations mahasabha ne 16 September ko ozone layer conservation ke liye international day declared kiya; yeh 1987 mein montriyaal Protocol par hastakshar ki date ki smriti mein manaya jata hai. 2026 ka ayojan “shital grah ke liye global action” par kendrit hai aur kigali sanshodhan ko apanae jane ke das year pure hone ko bhi rekhankit karta hai. [Q8]
- September, 16 - United Nations mahasabha ne 16 September ko ozone layer conservation ke liye international day declared kiya; yeh 1987 mein montriyaal Protocol par hastakshar ki date ki smriti mein manaya jata hai. 2026 ka ayojan “shital grah ke liye global action” par kendrit hai aur kigali sanshodhan ko apanae jane ke das year pure hone ko bhi rekhankit karta hai. [Q9]
- September 16 - United Nations mahasabha ne 16 September ko ozone layer conservation ke liye international day declared kiya; yeh 1987 mein montriyaal Protocol par hastakshar ki date ki smriti mein manaya jata hai. 2026 ka ayojan “shital grah ke liye global action” par kendrit hai aur kigali sanshodhan ko apanae jane ke das year pure hone ko bhi rekhankit karta hai. [Q10]
- September, 16 - United Nations mahasabha ne 16 September ko ozone layer conservation ke liye international day declared kiya; yeh 1987 mein montriyaal Protocol par hastakshar ki date ki smriti mein manaya jata hai. 2026 ka ayojan “shital grah ke liye global action” par kendrit hai aur kigali sanshodhan ko apanae jane ke das year pure hone ko bhi rekhankit karta hai. [Q11]

5. Agreement / Protocol Matching

EXAM TRAP diye gaye yugmon mein koi ek pair specific roop se galat nahi hai. CFCs ka ozone-kshay se clear relation hai. amliya rainfall mein aam taur par sulfuric acid aur nitric acid dono shamil hote hain, isliye “acid rainfall - nitric acid” ek vaidh relation hai. [Q12]

- Montreal Protocol - montriyaal Protocol woh international agreement hai jo khas roop se ozone-depleting substances ke control aur charanabaddh samapti se juda hai. kigali sanshodhan ne haidrophlorokarban (HFCs) ke charanabaddh kami program ko joda; HFCs shaktishali greenhouse gases hain, lekin svayan ozone-depleting nahi hain. [Q13]
