

BENEFITS AND USES OF FOREST - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Forests as Renewable Environmental Resources
2. Forest-Saving Materials & Substitution
3. Living Root Bridges - Traditional Forest Knowledge

1. Forests as Renewable Environmental Resources

- renewable resources ve resources hain jinaka dobara use kiya ja sakta hai. isliye forest ek renewable resources hai kyunki sustainable dohan ke baad iska phir se use kiya ja sakta hai. forest carbon dioxide ko absorbed karte hain aur oxygen paida karte hain, isliye ve environment ki quality badhate hain. is type abhikathan (A) aur reason (R) dono sahi hain, lekin (R), (A) ki sahi vyakhya nahi hai. [Q1]
- development ki avastha ke basis par natural resources ko is type vargikrit kiya jata hai: sanbhavit resources (capacity resources),; vastavik resources (Actual resources),; reserved resources (reserved area resources), (iv) stok resources (Stock resources). sanbhavit resources ve hain jo kisi specific area mein present hain aur bhavishy mein use kiye ja sakte hain. vastavik resources ve hain jinaka sarvekshan kiya ja chuka hai, jinaki amount aur quality specified ki ja chuki hai aur jinaka abhi use kiya ja raha hai. kisi vastavik resources ka development technology aur production lagat par dependent karta hai. isliye abhikathan aur reason dono sahi hain, lekin reason abhikathan ki vyakhya nahi karata. [Q2]

2. Forest-Saving Materials & Substitution

- (A) is true, but (R) is false. - "green dhatu" elyuminiyam ke liye used ek anaupacharik abhivyakti hai, kyunki iska punarchakran bar-bar kiya ja sakta hai aur punarchakrit elyuminiyam banane mein primary elyuminiyam ki comparison mein bahut kam energy lagati hai. kuchh upayogon mein elyuminiyam lakadi ka option ban sakta hai, lekin isi reason use "green dhatu" nahi kaha jata. isliye sawal ke abhipret abhikathan-reason context mein statement (A) svikary hai, jabki reason (R) usaki sahi vyakhya nahi hai; option (D) yathavat sahi hai. [Q3]

3. Living Root Bridges - Traditional Forest Knowledge

- living jad pul trees ko akar dene ki ek vidhi hain, jo jawab-eastern Indian state Meghalaya ke dakshini hissa mein common roop se payi jati hai. [Q4]
