

GLOBAL EFFORTS OF THE CONSERVATION OF FOREST - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. WWF & World Wildlife Day
2. Miyawaki Method
3. UN Convention to Combat Desertification
4. New York Declaration on Forests
5. Global Forest-Cover Leaders & National Targets
6. International / Global Environment Facts
7. Forest-Cover Ordering & NAEB
8. Project Elephant
9. Desert Plant Adaptations
10. Dense Deciduous Forest & Himalayan Vegetation

1. WWF & World Wildlife Day

- Giant Panda - 1961 mein apni establishment ke samay se hi world wildlife kosh ne large panda ko apne sangathanatmak pratik ke roop mein apanaya. iska scientific naam 'Ailuropoda melanoleuca' hai. [Q1]
- Giant Panda - world wildlife kosh ke logo mein large panda ko un sabhi endangered species ke pratik ke roop mein darshaya gaya hai, jo apne basic natural area aur vatavaran ki anumati milane par phal-phul sakti hain. [Q2]

EXAM TRAP United Nations ka world wildlife day har ek year 3 March ko manaya jata hai. yeh date 3 March 1973 ko CITES ko apanae jane ki smriti se judi hai. diye gaye charon options mein 3 March nahi hai; isliye koi option sahi nahi hai aur maujuda vivadit chihn (*) surakshit rakha gaya hai. [Q3]

2. Miyawaki Method

- Creation of mini forests in urban areas - miyavaki paddhati (Miyawaki Method) un ksharit bhumiyon par teji se forest cover developed karne ke liye sabse effective vriksharopan vidhiyon mein se ek hai, jinaka use agriculture ya construction jaise dusre uddeshyon ke liye kiya gaya ho. yeh effective hai kyunki yeh natural punarvanikaran ke siddhanton par based hai, matlab local area ki basic tree species ka use karna aur natural forest regeneration prakriyaon ki nakal karana. [Q4]

3. UN Convention to Combat Desertification

- 1994 mein established marusthalikaran se nipatane ke liye United Nations Convention (UNCCD) environment aur development ko sustainable land management se jodane wala ekamatr legal roop se badhyakari antarrashtriya agreement hai. yeh sustainable development target 15 aur land erosion tatasthata (Land Degradation Neutrality - LDN) ke pichhe main prerak shakti hai. [Q5]

4. New York Declaration on Forests

- 1, 2 and 4 - nyuyork forest announcement (New York Declaration on Forests) ek svaichchhik aur legal roop se non-badhyakari rajanitik announcement hai, jo sarakaron, kanpaniyon aur nagarik samaj ke beech sanvad se developed hui aur 2014 mein nyuyork mein organized United Nations mahasachiv (Secretary-General's) climate shikhar conference se prerit thi. pehli baar world netaon ne natural forests ki damage ko 2020 tak adha karne aur 2030 tak ise samapt karne ka prayas karne ke liye global samay-limit ka samarthan kiya. yeh India se bhi bade area mein forests aur agriculture land ko punarsthapit karne ka ahvan karta hai. in lakshyon ki prapti se har ek year 4.5 se 8.8 biliyan tan carbon pollution kam hoga - jo sanyukt state amerika ke abhi emissions ke lagbhag barabar hai. is announcement ka abhi 200 se zyada sansthaon dwara samarthan kiya gaya hai, jinmein 50 se zyada sarakaren, world ki 50 se zyada sabse badi kanpaniyan aur 50 se zyada prabhavashali nagarik samaj aur svadeshi organization shamil hain. [Q6]

5. Global Forest-Cover Leaders & National Targets

- world bank (2023) ke ke mutabik options mein diye countries ke geographical/land area ke sapeksh forest cover ka percent is type hai - country - forest cover (percent mein) japan - 68.4 indoneshiya - 47.7 India - 24.5 chin - 24.0 [Q7]
- bhutan government ne apne total geographical area ke 60% hissa par forest banaye rakhne ka prastav parit kiya hai. abhi uske lagbhag 71.6% area (2023 WB anuman) par forest hain. [Q8]

6. International / Global Environment Facts

EXAM TRAP WWF ki establishment 1961 mein hui thi; isliye statement 1 sahi hai. year 2000 ki charchit nandanakanan (Nandankanan) ghatana mein tripainosomiyasis (trypanosomiasis) se tigers ki mrityu ki report thi; sawal mein "13 lions" likha hai, isliye statement ki shabdavali vishvasaniy nahi hai. yukeliptas (Eucalyptus) ko common roop se sirf "environment-mitr" (Eco-Friend) ya "environmental shatru" (Enemy) kahana scientific roop se universal classification nahi hai; effect species, place aur management par dependent karte hain. kolakata mein India ka "sabse bada jalajivashala" hone wala dava samay ke saath badalane wala sarvochch hai aur sthayi abhi tathy nahi hai. shabdavali truti, non-manakikrit environmental lebal aur samay-dependent dave ke reason koi ek option nirvivad nahi hai; maujudha (*) surakshit rakha gaya hai. [Q9]

- Statement 1 is not correct but Statement 2 is correct - 'world tree city' program United Nations ke food aur agriculture organization (FAO) aur arbar de phaundeshan (Arbor Day Foundation) ka program hai, UNCDF ka nahin. haidarabad ko apne shahari forests ko badhane aur banaye rakhne ki pratibaddhata ke reason 2020 mein 'world tree city' ke roop mein recognition mili thi. [Q10]
- Suriname - world bank (2023) ke ke mutabik forest area ke sabse zyada percent wale country is type hain - surinam - 94.4% guyana - 87.1% japan - 68.4% indoneshiya - 47.7% [Q11]
- Petersburg - pehla antarrashtriy tiger manch 2010 mein 21 se 24 navanbar ke beech sent pitarsabarg (rus) mein organized kiya gaya tha. [Q12]

7. Forest-Cover Ordering & NAEB

- 3-2-4-1 - ISFR-2023 ke ke mutabik Maharashtra mein forest area ka percent 16.53%, Madhya Pradesh mein 25.00%, Odisha mein 33.67% aur Chhattisgarh mein 41.28% hai. [Q13]
- national vanikaran aur Ecology-development bord (National Afforestation and Eco-Development Board, NAEB) India government dwara 1992 mein established kiya gaya tha. [Q14]

8. Project Elephant

- Galat kathan: The welfare of only wild elephants is taken care off; diye gaye options ke ke mutabik sahi jawab 'C' hai. hathi project February, 1992 mein centre prayojit scheme ke roop mein shuru kiya gaya tha. mukhya purpose the - a. elephants, unke avason aur galiyaron ki protection karana. b. human-animal sangharsh ke muddon ko sanbodhit karana. c. palatu elephants ka kalyana. [Q15]

9. Desert Plant Adaptations

- 1, 2 and 3 - marusthal mein plants ke living rahane ke liye sanrachanatmak anukulan important hai. pattiyon par momi parat vashpikaran ke medium se hone wali water damage ko rokati hai. [Q16]

10. Dense Deciduous Forest & Himalayan Vegetation

- Paschim Champaran - diye gaye options mein pashchim chanparan mein saghan parnapati forest cover ke tahat zyada area hai. [Q17]
- Temperate forest - Uttarakhand mein ok-rododendron samashitoshn forests mein paye jane wale specific plants hain. samashitoshn area mein Quercus leucotrichophora (banj ok), Rhododendron arboretum (burans), Myrica esculenta (kaphal), Lyonia ovalifolia (anyar), Ilex dipyrena, Quercus semecarpifolia (kharasu ok) aadi ki upasthiti main hai. [Q18]
