

RENEWABLE AND NON RENEWABLE ENERGY RESOURCES - FULL MIND MAP

Topic-wise | Hinglish | SSC / BPSC / BSSC / Railway

Topics in this chapter:

1. Sustainable Power Sources & Installed Renewable Capacity
2. Renewable vs Non-Renewable Classification
3. Chhattisgarh - Major Power Source

1. Sustainable Power Sources & Installed Renewable Capacity

- Hydro- electricity - jalavidyut renewable source hai, kyunki water-cycle bijali production mein use hone wale water-resources ki lagatar punahpurti karta hai. 2012 ke is sawal ke traditional sustainable-development context mein coal, petroliyam/gas aur atoms energy ki comparison mein jalavidyut ko prathamikata di gayi thi. [Q1]
- Wind power - is sawal ke 2014 established-capacity context mein diye gaye renewable sources mein pavan energy ki established capacity sabse zyada thi. MNRE ke varshavar ankadon mein 31 March 2014 tak pavan capacity lagbhag 21 GW thi, jo us samay solar, biomass aur waste-se-energy (Waste-to-Energy) se kaphi zyada thi. [Q2]

2. Renewable vs Non-Renewable Classification

- Biomass - bayomas plants aur animals se obtained hone wala renewable biotic substance hai. bayomas mein Sun se obtained sanchit chemical energy hoti hai. [Q3]
- Petroleum - renewable energy woh energy hai jo natural sources se obtained hoti hai aur jinaka punarbharan unke consumption ki comparison mein zyada teji se hota hai. udaharan ke liye, suraj ki roshni aur pavan aise source hain jinaki lagatar punahpurti hoti rahati hai. [Q4]

3. Chhattisgarh - Major Power Source

- Chhattisgarh energy resources mein rich hai. thermal power Chhattisgarh mein energy ka main source hai. [Q5]
